

10/07/2021

Attention:
Village of Bayside, WI
Architecture Review Committee

PROJECT/SITE OWNER: William Greaves PROJECT ADDRESS: 8851 N Bayside Dr	PROJECT SUMMARY: New 55 foot at maximum height radio tower
---	---

I have reviewed the proposed new radio tower for compliance with the Village's ordinances and have determined the following for consideration

Sec. 125-89. - "A" residence district regulations.

(4) A side yard of not less than twenty feet shall be provided for on each side of every building.

(5) A rear yard of not less than 20 feet shall be provided for every building.

1. The placement of the radio tower complies with the required setbacks

Sec. 104-4 (h) 2 - Accessory structures.

Height restrictions. No radio or TV tower shall exceed a height of 20 feet above the roof line of the building on the property upon which the antenna is located or 60 feet above the ground measured at ground level, whichever is the minimum.

The information the applicant provided states that his roof line is 31 feet 7 inches above grade.

The height of the radio tower at its maximum height is 3 feet 5 inches over the allowable height above the roof line. This does not consider any variance in grade from the house to the tower site.

VILLAGE CODE REVIEW

Supporting documentation or testimony must be provided at the meeting to verify code compliance with the above observations in red.

Dave Hendrix

I understand that I am subject to all applicable codes, laws, statutes and ordinances, including those described on the Notice to Permit Applicants form; am subject to any conditions of this permit; understand that the issuance of this permit creates no legal liability, express or implied, on the state or municipality; and certify that all the above information is accurate. If one acre or more of soil will be disturbed, I understand that this project is subject to ch. NR 151 regarding additional erosion control and stormwater management and the owner shall sign the statement on the Notice to Permit Applicants form. I expressly grant the building inspector, or the inspector's authorized agent, permission to enter the premises for which this permit is sought at all reasonable hours and for any proper purpose to inspect the work which is being done.

I vouch that I am or will be an owner-occupant of this dwelling for which I am applying for an erosion control or construction permit without a Dwelling Contractor Certification and have read the cautionary statement regarding contractor responsibility on the Notice to Permit Applicants form.

SCOPE of WORK

Location: 8851 N Bayside Dr, Bayside WI 53217

Summary: Basement amateur (ham) radio room and antenna tower

Enclosures: (1). Residential plat survey drawing with distances noted from antenna tower base to the house, north lot line, and west lot line. (2). Plat survey drawing at 100% enlargement with approximate locations of radial ground lines and transmission line to basement radio room.

Description: This project includes remodeling a basement corner and constructing an antenna tower base for use in amateur (ham) radio. A qualified electrician will be employed with the contractor. A tower service company will provide complete antenna tower installation.

The corner of the basement that will become the radio room contains the current power service main breaker panel and utility (power, telephone, fiberoptic line) entrances. A new branch circuit with two 120V/20A lines and one 240V/20A line will be added. Within the radio room, all equipment will be bonded together with a bonding bus. A single point ground plate will have lightning arrestors installed for all coaxial cabling, as well as connections to the equipment bus and the external power service ground.

The antenna base will be concrete with rebar and anchors per specifications of the tower manufacturer, e.g., US Tower model HDX-538 (5x5x7ft concrete base, 21ft 6 inches self-supporting triangular crank-up tower to a maximum of 38ft with electric crank-up and tilt-over features). The tower will be grounded, per manufacturer's specifications, and will have ground radials (6-9) of about 60ft each with 8-10 foot ground rods exothermically welded every 20 feet to heavy copper wire or strap. The tower will be bonded to the power service external ground rod which is near the coaxial cable transmission lines entrance into the basement radio room. The coaxial cabling will be suitable for below ground installation via direct bury or in a PVC conduit; control wiring for the tower winches and antenna, e.g., rotator, will be in electrical conduit to the tower. Coaxial cable lightning arrestors will be installed on an external entrance panel that will be grounded to the external power line ground rod.

This project is intended to produce a high level of safety, lightning protection, and radio frequency control for amateur radio.

HDX-538 DESCRIPTION

US Tower's HDX Series heavy-duty crank-up towers have up to 2½ times more wind-loading capacity than others commonly advertised. This superior strength allows for large stacked arrays, while using our commercial type bases and anchor bolts that can be easily installed and vertically adjusted. All HDX Series T-bases are designed to use our TRX Series raising fixtures which make installations and antenna servicing a one-man job.

US Tower carries as accessories many different sizes and strengths of masts which can be used with the HDX Series towers. The HDX-572MDPL and 589MDPL motorized towers provide dual level wind, positive pull down and heavy-duty gear box features. The HDX-589MDPL comes complete with the MCL-100 limit switch package included. All towers using MDP-750 and MDPL-1000 motor drives may use the RMC-1000 accessory limit switch package which allows the raising and lowering of your tower from the comfort of your ham shack or any remote location. MCL-100 is also available (see accessory page).

US Tower's special T-base design allows the tower to hinge for easy installation. US Tower's crank towers require no guying. The HDX Series towers are rated at 90 mph winds per TIA/EIA specifications. To assist you in getting a construction permit, IBC 2006 calculations are available for most towers.

THIS DOCUMENT CONTAINS PROPRIETARY INFORMATION AND SHALL NOT BE USED OR REPRODUCED OR ITS CONTENTS DISCLOSED, IN WHOLE OR IN PART, WITHOUT THE PRIOR WRITTEN CONSENT OF US TOWER CORPORATION

General Notes:

Tower Model: HDX-538

1. All work shall be in conformance with the requirements of the "International Building Code - 2006" and "Structural Standards for Steel Antenna Towers and Antenna Supporting Structures TIA/EIA-222-F", by the Telecommunications Industry Association.
2. The 2006 International Building Code requires the use TIA/EIA-222-F for tower design. TIA/EIA requires the use of the American Institute of Steel Construction, Specification for Structural Steel Buildings, June 1, 1989. (AISC 9th Edition). Consequently, all steel design was performed using the AISC 9th Ed.
3. All concrete shall have a minimum compressive strength of 2500 psi at 28 days unless noted otherwise. All concrete shall conform to the requirements of the International Building Code and referenced edition of ACI 318. Slump shall not exceed 4-1/2 inches.
4. Reinforcing steel shall be intermediate grade deformed bars conforming to ASTM A-615. No. 4 bars and smaller shall be Grade 40, No. 5 bars and larger shall be Grade 60. All reinforcing details, placement etc. shall conform to the requirements of the International Building Code and ACI 318. No welding allowed.
5. All reinforcing steel, anchor bolts, dowels and other inserts etc. shall be securely anchored in place, in the required positions, prior to pouring concrete.
6. Steel fabrication and erection shall conform to the requirements of the AISC Manual of Steel Construction and the Electronic Industries Association (as referenced in note 1 & 2 above).
7. All welding shall be performed by AWS certified welders for each type of weld used. (Using the GMAW (spray arc) welding process with ER70S-6 welding wire).
8. All tower section lift cables & guy cables shall be 7 x 19 Aircraft cable with the following minimum strengths:

<u>Cable diameter (in)</u>	<u>Minimum Strength (lbs)</u>
3/16	4200
1/4	7000
5/16	9800
3/8	14400
7/16	17600
1/2	22800

9. This tower analysis is based the antenna being installed at a height of one foot above the top of the tower. The wind load of the antenna(s) shall not exceed the load shown in these calculations. The Owner of the tower shall assume full liability for verification of the antenna loading.
10. This tower is designed to be used in its fully extended position.
11. The design of the hoist system is not with in the scope of these calculations and shall be designed by others.
12. This tower has not been designed to meet any twist or sway criteria.
13. The Owner shall verify that the quantity and size of waveguide / Coax cables match the values used in these calculations.
14. The engineering and design of the antennas are not with-in the scope of these calculations.
15. Installations on hills, escarpments and other special wind areas is not with-in the scope of these calculations.
16. US Tower Corp. recommends that the installation of this tower and its foundation be performed by a Professional, licensed Contractor with experience installing these types of structures.
17. The Contractor is responsible for conducting all construction in accordance with all Federal, State, OSHA, and Local laws and ordinances. The Contractor is also responsible for checking the site for underground facilities prior to the start of work.
18. US Tower Corp. and it's Engineers shall not be responsible for errors and omissions in the project not in conformance with these calculations and the Codes and Standards referenced here-in.
19. US Tower Corp. and it's Engineers accept no responsibility for field inspection during construction nor for the method of construction.
20. The Owner shall assume full responsibility & liability for the periodic inspection of all tower section lift cables & guy cables. Any cable with any sign of distress or excessive stretch shall be replaced immediately.
21. The information contained in these calculations is the property of US Tower Corp. and shall only be used to obtain an installation permit. Any other use shall be authorized by US Tower in writing prior to utilizing the information contained herein.

Anchor Bolt Anchorage

Tower Model: HDX-538

ACI 318-05 App. D. Tension Anchorage Calculations - Cast in Place Straight Anchors

All units are pounds and inches unless noted otherwise. Date: 12/22/2009

Anchorage Description: 1-1" dia, F1554 Grd. 36 or A-307 anchor rods

Concrete f'c (psi): **2500** Is this in a moderate or High Seismic area **1.00** Factored Req'd Tens. Load (lb): **27118** (LRFD value)
 Embedment: **21** AND do the loads include seismic loads? (Yes = 0.75, No = 1.0) ACI D.3.3 doesn't require this if loads don't include seismic.

h-ef: **17.08** If embedment x 1.5 is > 3 of the edge distances then use h-ef = the largest of the 3 edge distances / 1.5 App. D Section D5.2.3.

Anchor Input:
 No. of Anchors n: **1** Projected breakout area of single anchor
 Anchor dia: **1** A-Nco: 2626.6 Proj'd breakout area of anchor group (For a single anchor use A-Nco value)
 No. of threads / in: **8** A-Nc: 1722.0 (If have more than two anchors need to hand input A-Nc)
 Anchor f-y (psi): **36000** ecc: **0** Eccentricity of tension load - anchor groups only
 Anchor f-u (psi): **60000** AdjF-ec,N: 1.000 (ACI D5.2.4) for anchor groups loaded eccentrically
 phi: **0.75** AdjF-ed,N: 0.880 (ACI D5.2.5) for edge effects
 phi = 0.65 if material used is not ductile AdjF-c,N: **1.25** (ACI D5.2.6) Assumed cracked at service load levels
Can use 1.25 if is uncracked
Use 0.75 if supplemental reinforcement is provided
Use 0.70 if supplemental reinforcement is not provided

Steel Strength of Anchor in Tension (ACI D5.1)
 A-sec: 0.606 Area of anchor bolt head (Input 0 if plate washer is used)
 N-sa: 36345

Concrete Breakout Strength of Anchor in Tension (ACI D5.2)
 N-b: 84731 Width of plate washer at embed end of anchor
 N-cb: 81105 Length of plate washer at embed end of anchor

Anchor Pullout Strength (ACI D5.3)
 N-p: 30020 Area of plate washer minus rod area
 N-pn: 42028 (Plate thkn's must be >= 0.5 * bolt dia.)

Concrete Side-Face Blowout, Tension
 N-sb: 79953 Assumed cracked at service load levels
Can used 1.4 if is uncracked
Use 0.75 if supplemental reinforcement is provided
Use 0.70 if supplemental reinforcement is not provided

Anchor Design Strength - LRFD
 Steel: 27258 Min. distance between multiple anchors (input 0 for one anchor)
 Breakout: 42774 Edge distance perp. To c-min.
 Pullout: 29420 c-min: 10.250 Min. edge distance considering all fasteners
 Blowout: 55987 Factor for single anchor if c2 < 3(c-min)
Factor for multiple anchors if c-min < .4(h-ef)
and anchor spacing is < 6(c-min)
Use 0.75 if supplemental reinforcement is provided
Use 0.70 if supplemental reinforcement is not provided

Notes:

1. For normal weight concrete only.
2. Anchors shall be either a headed bolt or have nuts and a bearing plate at the embed end as indicated above.
3. ACI Section D.5.2.3 is not included in this spreadsheet. (i.e. End of wall applications are not covered.)
4. If the design is controlled by concrete failure (i.e. non-ductile failure) then the Design Strengths controlled by concrete must be at least 2.5 times the factored forces transmitted by the attachment. (2006 IBC 1908.1.16) Alternatively, the steel anchor "or" the attachment that the anchor is connecting to the structure shall be designed so that the attachment will undergo ductile yielding at a load level corresponding to anchor forces no greater than the design strength of the anchors* determined above. If "Steel Tension" controlled above then the connection is considered ductile and no further adjustments etc. are required. (Also see note 6.)
5. Any supplemental reinforcing shall have f-y = 60,000 psi min.
6. Per ACI D.3.3 if anchor design does not include seismic loads then the design does not have to be controlled by steel ductility.

LRFD Design Strength:	27258 Lbs
ASD Design Strength:	19470 Lbs
Design Controlled By:	Steel Tension
(Min. center to center of anchor spacing (in):	4
(Min. edge distance is same as min. cover per ACI 7.7.	ACI D.8.1

Anchor Bolt Anchorage Design Load:

Anchorage Tension Design Force (lbs): 27118 (LRFD level force)
 (See Anchor Bolt Anchorage page for anchorage design)

Summary:

Use foundation 4 ft. square by 7 ft. deep (below undisturbed soil).
 Reinforce foundation with 8 #7 vertical bars (total) with #3 ties at 12" on center, and 3 ties in the top 5".
 Use 1 vertical bar at each corner of the foundation and one bar at the middle of each face of the fdn.
 Use 1" dia. ASTM F1554 Gd. 36 or ASTM A-36 galvanized anchor bolts, 27" long.
 Total of 3 anchor rods, one near each tower leg with a minimum embedment of 21". Use heavy hex nuts.

HDX-538 FOUNDATION

THIS DOCUMENT CONTAINS PROPRIETARY INFORMATION AND SHALL NOT BE USED OR REPRODUCED OR ITS CONTENTS DISCLOSED, IN WHOLE OR IN PART, WITHOUT THE PRIOR WRITTEN CONSENT OF US TOWER CORPORATION.

Foundation has been designed to accommodate the following loads:

Overturning Moment = 33.801 ft - kips
 Base Shear = 1.16 kips
 Structure Weight = 1.40 kips

Soil and Concrete Design Parameters.

Allowable Foundation Pressure 1500 psf
 (Increases based on depth)
 Lateral Bearing Pressure 100 psf/ft
 (Increases based on depth)
 Concrete $f_c' = 2500$ psi min. @ 28 days.

Plan View - Reinforcing

Plan View - Anchor Bolt Layout

No Scale

"REF" dimensions are provided for reference only. Use the tower base plate assembly to locate anchor bolts.

Foundation Notes:

1. All concrete shall have a minimum compressive strength of 2500 psi at 28 days unless noted otherwise. All concrete shall conform to the requirements of the International Building Code and the referenced edition of ACI 318. Slump shall not exceed 4-1/2 inches.
2. Reinforcing steel shall be intermediate grade deformed bars conforming to ASTM A-615. No. 4 bars and smaller shall be Grade 40, No. 5 bars and larger shall be Grade 60. All reinforcing details, placement etc. shall conform to the requirements of the International Building Code and ACI 318. No welding allowed.
3. All reinforcing steel, anchor bolts, dowels and other inserts etc. shall be securely anchored in place, in the required positions, prior to pouring concrete.
4. The owner is responsible for verifying the soil at the site provides a minimum safety factor of 2.0 for the soil parameters used for this design.
5. The allowable lateral soil bearing value was doubled as allowed per 2006 IBC section 1805.1 for isolated foundations not adversely affected by a 0.5" motion at the ground surface due to short term lateral loads.
6. The foundation design does not consider the effects of ground water.
7. The contractor is responsible for safe excavations in accordance with all Federal & Local laws and ordinances and OSHA requirements.
8. The contractor is responsible for the correct placement of all anchor bolts. US Tower recommends that the anchor bolts be placed using the tower base plate assembly provided with the tower. (The base plate assembly can be provided before the tower if desired.)
9. The foundation shall be one continuous pour such that cold joints do not develop. The contractor is responsible for verifying adequate concrete coverage is provided for all reinforcement to avoid the potential for rebar corrosion. Concrete shall be consolidated using vibratory methods.
10. The top of the footing shall be troweled level and smooth (or have a broom finish if preferred) in the area of the tower. Water shall be directed away from the tower base and anchor bolts outside of the tower area.
11. See General Notes sheet (earlier in calcs) for additional information & requirements.
