

## Memorandum

**Date:** February 16, 2022

**To:** Joanna Julian, Thompson Dorfman LLC

**From:** Lance Park, Senior Air Quality Scientist, FirstCarbon Solutions

**Subject:** Preliminary Air Quality Modeling Results for the Belvedere Mallard Pointe Project

This memorandum summarizes the preliminary air quality results of the Mallard Pointe Residential Project, which proposes to develop the approximately 2.8-acre site with 6 single-family homes, 3 accessory dwelling units, 10 duplexes, a 23-unit apartment building, approximately 30,200 square feet of parking and paved surfaces, and approximately 37,400 square feet of landscaped space. As demonstrated in this memorandum, the project would not result in a potentially significant impact related to air quality or greenhouse gas (GHG) emissions based on preliminary modeling results.

Total Emissions (lbs)	736.68	291.54	514.56	146.16
<b>Average Daily Emissions (lbs/day)</b>	<b>2.02</b>	<b>0.80</b>	<b>1.41</b>	<b>0.40</b>
BAAQMD Significance Thresholds (lbs/day)	54	54	82	54
<b>Project Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Notes: Note: All zeros displayed in the above table represent emission values which are below 0.005 tons per year and have subsequently rounded down. All true zero values are represented with "-". Stationary source emissions have not been modeled but would be negligible in comparison with other project operational emissions and would not cause an exceedance in significance thresholds.
