

Guidelines for Fire Debris Disposal

NEAL ROAD RECYCLING AND WASTE FACILITY

The Neal Road Recycling and Waste Facility (NRRWF) accepts fire debris and ash from contractors in the Camp Fire Alternative Fire Debris Removal Program.

Certificate for Disposal

Haulers must present a certificate to dispose of fire debris and ash at the NRRWF. Butte County Environmental Health issues certificates directly to contractors.

Disposal Fees –

- Municipal Solid Waste: \$42.11 per ton (includes fire debris and ash, and green waste)
- Scrap Metal: \$3.50 per ton
- Clean Asphalt or Concrete (no rebar or wire): no charge
- Other Asphalt or Concrete \$8 per ton (concrete pieces cannot exceed 2 feet in length, rebar cannot protrude more than 5 inches from concrete)

Moisture in Fire Debris and Ash

- NRRWF cannot accept saturated and muddy debris, and has the right to reject unacceptable loads. Haulers should allow material to dry after rain before hauling fire debris and ash.
- Test for Moisture: Perform a paint filter test to determine if material is too saturated for disposal. See how to run a paint filter test:
https://www.epa.gov/sites/production/files/2015-12/documents/9095b_0.pdf

Green Waste

- Green waste cannot include logs greater than 6 feet long or 28 inches in diameter, pine needles, leaves, rocks, or dirt.

Vehicle Weight

- All haulers must adhere to vehicle weights set by California Vehicle Code. California Highway Patrol regularly monitors vehicles disposing at the NRRWF.
