# 1 Introduction

---

## 1.1 Project Overview

The City of Desert Hot Springs (City) proposes development of the Corporate Yard Park, located adjacent to the City's Corporate Yard (proposed project or project). The proposed project would be developed consistent with the policies and goals established in the City's Parks and Recreation Plan, approved in 2013. The City has allocated Community Design Block Grant (CDBG) funding for Federal Fiscal Years 2018/2019 to supplement design and construction costs associated with development of the proposed project.

## 1.2 California Environmental Quality Act Compliance

The City of Desert Hot Springs is the lead agency for the proposed project (California Environmental Quality Act (CEQA) Statute §21067 and CEQA Guidelines Article 4 and §15367]. The City Council is the governing body for the approval of the proposed project and adoption of the Mitigated Negative Declaration (MND). Because the proposed project involves a change to the existing site, the City Council's consideration of the project and its potential environmental effects is a discretionary action that is subject to CEQA. This Initial Study (IS) and its appendices have been prepared in accordance with the CEQA statute and the State's Guidelines for Implementation of CEQA. This MND, when combined with the Notice of Intent (NOI) to Adopt a MND, serves as the environmental document for the proposed project pursuant to the provisions of CEQA.

The overarching goal of CEQA is to protect the physical environment. To achieve that goal, CEQA requires that public agencies identify the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts when avoidance or reduction is not feasible. It also gives other public agencies and the public an opportunity to comment on the proposed project.

## 1.3 Scope of Environmental Review

This environmental impact analysis included in this MND is consistent with the Environmental Checklist (i.e., Initial Study or IS) per CEQA Guidelines Sections 15063–15065. An explanation and discussion of each significance determination is included following the checklist in Sections 3.1 through 3.21.

For this IS that supports the MND, one of the following four responses is possible for each environmental issue area:

- Potentially Significant Impact
- Less-Than-Significant Impact with Mitigation Incorporated
- Less-Than-Significant Impact
- No Impact

The IS checklist and accompanying explanation of checklist responses provide the information and analysis necessary to assess relative environmental impacts of the proposed project. In doing so, the City will determine the extent of additional environmental review, if any, for the proposed project.

## 1.4 Public Review Process

Public participation is an essential part of the CEQA process. As required by CEQA, the City shall provide adequate time for other public agencies and members of the public to review and comment on a CEQA document that has been prepared. This MND has been made available to members of the public, agencies, and interested parties for a 30-day public review period in accordance with CEQA Guidelines Section 15105. Public review of the MND is intended to focus “on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should: (1) identify the specific effect, (2) explain why they believe the effect would occur, and (3) explain why they believe the effect would be significant” (14 CCR 15204).

This IS/MND is available for review during the 30-day public review period at the following locations:

### **In Person – By Appointment Only**

City of Desert Hot Springs  
Planning Department  
65950 Pierson Boulevard  
Desert Hot Springs, CA 92240

To request an appointment, please contact the City’s Public Works Department via email at [dporras@cityofdhs.org](mailto:dporras@cityofdhs.org) or by phone at (760) 329-6411.

### **Online**

<https://www.cityofdhs.org/planning-documents>

Once the 30-day public review period has concluded, any advisory body of a public agency shall consider the MND together with any comments received during the public review process. The decision-making body shall adopt the proposed MND if it finds there is no substantial evidence that the proposed project will have a significant effect on the environment and that the MND reflects the lead agency’s independent judgment and analysis. After approval of the project, the City shall file a Notice of Determination at the Riverside County Clerk’s office within five working days after deciding to carry out or approve the proposed project.

## 2 Project Description

---

Under the proposed project, the Desert Hot Springs Public Works Department would develop a park adjacent to the City's Corporate Yard, within five City-owned parcels. This section describes the local setting, proposed project components, and permits and approvals required for development of the proposed project.

### 2.1 Location and Setting

#### 2.1.1 Regional Location

The project site is located in the City of Desert Hot Springs (City) in Riverside County. The City of Desert Hot Springs is located within the Coachella Valley, separated from western Riverside County by the San Jacinto and San Bernardino Mountain ranges. Figure 1 shows a regional and local depiction of the project site. Primary local access to the project site is provided via Palm Drive.

The project site would be constructed within Section 36, Township 2 South, Range 4 East of the U.S Geologic Survey 7.5-minute quadrangle maps. Regional Access to the City is provided via Interstate (I-) 10. The center point of the site is located at 33.95 degrees north (latitude) and -116.51 degrees west (longitude).

#### 2.1.2 Local Setting

The 10-acre project site is assigned Assessor's Parcel Numbers (APNs) 663-320-008, -09, -011, -014, and -020. Approximately three acres of the project site is currently developed and utilized for the Desert Hot Springs Corporate Yard. The City's Corporate Yard has been in operation since at least 1984, and has remained largely unchanged. The remainder of the site is generally flat, undeveloped land with sparse vegetation. The majority of the project site has been previously graded, including a paved access road from Hacienda Avenue to the Corporate Yard and a dirt road in the southern portion of the site.

The project site is bounded by Flora Avenue to the north, Cholla Drive to the west, Hacienda Avenue to the south, and existing multi-family residential development, a church, and vacant land to the east. As shown on Figure 1, the project site is located in an area largely developed with residential land uses. Vacant land southwest of the project site is designated as Conservation Land under the Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP).

#### 2.1.3 General Plan and Zoning Designations

Desert Hot Springs employs a "single map" system of land uses where General Plan land use designations are the same as zoning districts. The project site is designated as Residential Low Density (0-5 du/acre) (R-L) on the City's General Plan Land Use Designations map (Desert Hot Springs 2000). This designation typically provides for moderately low-density single-family subdivisions and Planned Residential Developments. It serves to transition between lower and more moderate (medium) residential densities (Desert Hot Springs 2000). Based on the City's Parks and Recreation Master Plan, the current parkland ratio in the City is 1.0 acres per 1,000 residents, which is considerably lower than the Quimby Act recommended ratio of 3.0 acres per 1,000 residents. Although parks are not expressly permitted in the Residential Low Density designation, per the City's Municipal Code, substantial

parkland is needed to support existing and future residents within the City. As such, the proposed park is permitted under the existing land use designation to support existing nearby residential development, and reduce the parkland deficit in the City.

Properties to the north, west of south of the project site are designated R-L, and developed with single-family residences. The property directly east of the northern portion of the project site is designated Residential Medium Density (0-8 du/acre) (R-M), and developed with multi-family residences. The property directly east of the southern portion of the project site is designated R-L, and is largely undeveloped except for a church on approximately one acre adjacent to West Drive. The vacant property southwest of the site is designated R-L, but it is within the Upper Mission Creek/Big Morongo Canyon Conservation Area within the MSHCP boundary, and remains undeveloped.

## 2.2 Project Components

The proposed project, known as Corporate Yard Park, includes development of approximately 7.6 acres of a 10-acre site as a community park. The remainder of the site would operate as the City's Corporate Yard. The proposed project would provide parks amenities for City residents identified in the Parks and Recreation Master Plan, reducing deficits for sports fields and parkland. The proposed park would be open to the public from 7 am to 10 pm daily. Figure 2 depicts a rendering of the proposed project. The proposed project would be open for public use. The proposed project would include the following improvements:

### **Football Field**

A turf football field would be installed on approximately 2.0 acres in the southeast portion of the project site. Bleacher seating would be installed on the north and south side of the field. Seating on the north side of the field would be partially shaded by two shade structures. A scoreboard would be installed at the west end of the football field. LED fixtures would be installed atop four light poles (approximately 60 to 80 feet high), erected on the north and south side of the field, toward the end zones. The light poles on the east end of the football field would be angled toward the west to avoid light overflow at the adjacent multi-family residential development to the east.

### **Baseball Field**

A turf baseball field would be installed on approximately 2.4 acres in the northeastern portion of the park. The field could accommodate existing programs such as little league baseball and softball. The field would include two dugouts, two bullpens and two sets of bleachers for spectators. A fence would be installed around the field, and a 50-foot-tall net would be installed along the east side of the field to block fly balls from the adjacent development to the east. The net would extend approximately 150 feet north from the south end of the field. A scoreboard would be installed at the north end of the baseball field. LED fixtures would be installed atop six light poles (approximately 60-80 feet high). Two light poles would be erected on the west side of the field, two on the south side of the field and two beyond the outfield fence.

### **Common Area**

Approximately 0.9 acres between the sports fields would be developed as a paved common area. A 560-sf concession area would be constructed center of the park. Two restroom stalls would be installed within the structure. Nine light fixtures are proposed within the common area, with a shade on top to direct light downward. A 900-sf storage shed would be constructed near the eastern site boundary

### **On-site Circulation and Parking**

Approximately 2.3 acres of the site would be developed with on-site circulation and parking. The main access to the project site would be provided via a driveway on Cholla Drive. The main access would provide access to the City's corporate yard to the north, a drop-off area near the center of the site, and the parking lot within the southwest portion of the site. Secondary access is available on from Hacienda Avenue, directly into the main parking lot. The main parking lot would be developed with 99 parking stalls, including four stalls compliant with Americans with Disabilities Act (ADA) standards. An additional 11 parking stalls would be included adjacent to the corporate yard. All access roads and parking areas would be paved. LED fixtures would be installed atop 19 light poles (12- to 24-foot height) erected within the parking lot areas and access points to provide adequate lighting for safety. Light fixtures would be downward facing to focus lighting on within the circulation areas and avoid light pollution to nearby residential developments.

Sidewalks would be installed at the southern end of the site along Hacienda Avenue to provide pedestrian access to the park. The central portion of the park, east of the drop-off area, would be paved for pedestrian access to the sports fields, common concession area and restrooms.

### **Corporate Yard**

The existing Corporate Yard would be relocated slightly to the west to accommodate the proposed park. The Corporate Yard will be approximately 2.4 acres in size once the park is developed, located in the northwest portion of the project site. The Corporate Yard would be surrounded by a fence, and a sliding gate would be installed near the park entry from Cholla Drive to provide controlled access to the Corporate Yard. The existing animal shelter at the south end of the Corporate Yard would remain in the same location.

### **On-site Drainage Improvements**

Existing on-site drainage generally flows from north to south via sheet flow. On-site drainage would be conveyed towards a retention basin proposed near the southern boundary of the project site adjacent to the parking lot.

### **Utilities**

The project site would be served by domestic water and sewer services from MSWD. The proposed project would establish water and sewer connections from existing infrastructure on Cholla Drive. No off-site improvements would be required.

## 2.3 Construction Schedule

The Corporate Yard Park would be developed in a single phase. Duration of grading and construction is anticipated to take approximately 12 months.

## 2.4 Future Maintenance

The City of Desert Hot Springs will be responsible for future maintenance of the public grounds and facilities. Maintenance is anticipated to occur on a weekly basis for landscape maintenance. Additional maintenance activities would be periodic, on an as-needed basis.

## 2.4 Required Permits and Approvals

The City of Desert Hot Springs is the lead agency under CEQA and has principal approval authority over the proposed project. Implementation of the proposed project would require the following discretionary actions and approvals by the City:

- CEQA and Project Approval: Adoption of the MND and approval of the proposed project
- Development Review

In addition, ministerial permits, including grading permits, building permits, and public works permits, would be issued by the applicable City department to allow site preparation and construction of the proposed project.

The proposed project would also require approval from the following agencies:

- South Coast Air Quality Management District o PM-10 Plan for compliance with Rule 403.1; Dust Control in the Coachella Valley
- Regional Water Quality Control Board (RWQCB) National Pollution Discharge Elimination System (NPDES) Permit
- State Water Resources Control Board: Notice of Intent to comply with the NPDES General Permit/Storm Water Pollution Prevention Program (SWPPP)

# 3 Initial Study Checklist

## Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that would remain "Potentially Significant Impact" even with the implementation of mitigation, as indicated by the checklist on the following pages.

- |  |   |   |
|--|---|---|
| <input type="checkbox"/> Aesthetics                    | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality                        |

| <input type="checkbox"/> Utilities and Service Systems | <input type="checkbox"/> Wildfire                           | <input type="checkbox"/> Mandatory Findings of Significance |

### DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

### Evaluation of Environmental Impacts

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analyses,” as described in (5) below, may be cross-referenced).
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a. Earlier Analysis Used. Identify and state where they are available for review.
  - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c. Mitigation Measures. For effects that are “Less Than Significant With Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project’s environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
  - a. The significance criteria or threshold, if any, used to evaluate each question; and
  - b. The mitigation measure identified, if any, to reduce the impact to less than significance

### 3.1 Aesthetics

#### 3.1.1 Environmental Setting

The project site is located in the northwestern portion of the Coachella Valley and offers views of the San Geronio Mountains to the west, the Little San Bernardino Mountains to the north and east, the San Jacinto Mountains to the southwest and Santa Rosa Mountains to the south.

The project site is currently undeveloped and consists of desert land with shrubs and scattered boulders throughout the site, remnants of a rock house with only one remaining column standing, and discarded refuse found along Varner Road. On-site vegetation consists mainly of Sonoran creosote brush scrub in areas not disturbed by existing roads that traverse the project site. Topographically, the project site is generally flat with a minor downward trending slope from the northwest to the southeast.

#### 3.1.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>I. AESTHETICS</b> – Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project have a substantial adverse effect on a scenic vista?***

**Less Than Significant Impact.** A scenic vista is the view of an area that is visually or aesthetically pleasing from a certain vantage point. It is usually viewed from some distance away. Aesthetic components of a scenic vista include (1) scenic quality, (2) sensitivity level, and (3) view access. A scenic vista can be impacted in two ways: a development project can have visual impacts by either directly diminishing the scenic quality of the vista or by blocking the view corridors or “vista” of the scenic resource. Important

factors in determining whether a proposed project would block scenic vistas include the project's proposed height, mass, and location relative to surrounding land uses and travel corridors.

The City of Desert Hot Springs General Plan does not designate specific scenic corridors, but scenic vistas afforded to the City include views of the surrounding mountains, in particular the San Bernardino Mountains to the northwest and the Little San Bernardino Mountains to the north.

Approximately 1/3 of the project site is currently developed as the City's Corporate Yard and animal shelter. The corporate yard will continue operation as part of the proposed project, but some features will be relocated to the northwest portion of the site provide adequate space for the proposed park improvements. In addition, the Corporate Yard area would be reduced from approximately 3.5 acres to 2.3 acres. Ultimately, the visual character of the Corporate Yard and animal shelter will be similar to existing conditions; therefore, the Corporate Yard would not result in new impacts on scenic vistas.

Development of the proposed park would include construction of a baseball field, football field, common area with concessions/restrooms and on-site parking/circulation. Proposed park facilities would not include structures that would block or impede views in the vicinity of the project site. The most dominant features proposed within the project site are the sports field lighting (60 to 80 feet high) and the safety net along the eastern property boundary (50 feet high) adjacent to existing multi-family residential development. The proposed field lighting would generally display a thin, narrow form that would not block surrounding mountain views. The proposed safety net would be visible along the eastern property boundary, but the net would be largely transparent from a distance, and the surrounding mountains would still be visible through the netting.

**b) *Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?***

**No Impact.** The nearest officially designated State scenic highway is State Highway 62 located approximately 4.5 miles west of the project site. Highway 62 is the main corridor gateway to Joshua Tree National Park and the main arterial roadway for the communities of Yucca Valley, Joshua Tree and Twenty-Nine Palms. The project site would not be visible from Highway 62, so implementation of the proposed project would not affect scenic resources within close proximity of a state scenic highway.

**c) *In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?***

**Less Than Significant Impact.** The project site is located within an urban area predominantly developed with residential uses. In its existing condition, approximately 1/3 of the project site is developed as the City's Corporate Yard and animal shelter and the remainder of the site is disturbed, undeveloped land. The project site's land use designation is low density residential (L-R), and parks are permitted within all residential land uses in the City.

Proposed alterations to the existing Corporate Yard would not drastically alter the visual character compared to existing conditions, so the visual character of the Corporate Yard is assumed to remain consistent with existing conditions.

Construction and operation of the proposed park would result in development of a 7.7-acre park that would introduce new park facilities and landscaping to the project site. Landscaping to be provided as part of the project would include drought tolerant plant beds and trees located within the proposed on-site retention areas around the parking lots along the eastern and southern site boundary and at access points. Trees would also be installed in the parking lot in the southwest corner of the site, the common area near the drop-off/pick-up round-about, in the flex area north of the baseball field, and on the north, west, and south side of the football field. In addition, the turf would be maintained within the football field and baseball field. The sports fields and on-site landscaping would be the main focal point of the proposed project. Additional facilities, such as concessions and seating, would be designed to maximize functionality and compliment the primary features. As such, the proposed project would not degrade the existing visual character and quality of the site and its surroundings, and would not conflict with applicable zoning and other regulations governing scenic quality.

**d) *Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?***

**Less Than Significant Impact.** Existing sources of nighttime lighting near the project site includes lighting surrounding residences. There are no existing street lights along the adjacent roadways or within nearby single-family residential developments. The multi-family residential development directly east of the project site has light poles to provide safety in the parking areas at night and smaller light poles along the pedestrian paths within the site. Existing sources of glare are relatively limited and generally consist of similar lighting sources as above.

Construction of the project would take approximately one year to complete and would occur within permitted construction times, pursuant to City ordinances. As such, no nighttime construction activities are anticipated.

Once installed, new lighting would facilitate nighttime use of the park. Nighttime use of park would occur 7 days per week, and hours of operation would be until 10 p.m. daily. A photometric study was conducted to determine projected light levels from the proposed project (Appendix A). The purpose of the study was to determine potential nighttime lighting impacts associated with project lighting and spillover to nearby residential properties and public roads. According to the study, proposed light fixtures would generate a maximum of 61 maintained horizontal foot-candles of light near second base at the baseball field and a maximum of 41 maintained horizontal foot-candles of light within the football field (Appendix A). The park entrances at Cholla Drive and Hacienda Avenue would generate a maximum of 1.7 and 2.8 maintained horizontal foot-candles at the property line, respectively. The light levels along the perimeter of the project site, due to light spillover would be very low (0.01-0.02 maintained horizontal foot-candles). No light spillover would be generated at residential development surrounding the project site. In addition, the lights would be fully shielded and downward directed to focus lighting onto fields of play and minimize light spillover onto adjacent properties. Use of shields and downward directing of lighting would also reduce opportunities for sky glow/light pollution, including to the Upper Mission Creek/Big Morongo Canyon Conservation Area, southwest of the intersection of Cholla Drive and Hacienda Avenue.

Regarding glare, the lighting at the sports fields would turn off by 10:00 pm daily when the park closes. Proposed lights would be fully shielded and downward directed to minimize light spillover (and glare) onto adjacent properties. The potential generation of glare during operation of proposed field lights would be limited due to the

installation of hooded and shielded fixtures and control of use hours. For the reasons described above, project lighting and glare impacts would not adversely affect existing nighttime and daytime views in the area.

### 3.1.3 Mitigation Measures

No mitigation measures are required.

## 3.2 Agriculture and Forestry Resources

### 3.2.1 Environmental Setting

#### Existing Conditions

The project site is surrounded by developed residential land uses, designated as Urban and Built-Up Land and Other Land by the California Department of Conservation Farmland Mapping and Monitoring Program (DOC 2017). No Prime Farmland, Unique Farmland, or Farmland of Statewide Importance exists within the project site and no adjacent properties are zoned for agricultural use. There is no designated forest land or timberland within the proposed project footprint or immediate vicinity.

### 3.2.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>II. AGRICULTURE AND FORESTRY RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) **Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

**No Impact.** According to the Farmland Mapping and Monitoring Program (FMMP) map, the project site and surrounding properties are designated as Urban and Built Up and Other Land. No Prime Farmland, Unique Farmland, or Farmland of Statewide Importance exists within or near the project site.

b) **Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?**

**No Impact.** No properties within or adjacent to the project site are zoned for agricultural use nor subject to a Williamson Act contract. The City does not have any current zoning ordinances that designate land for agricultural use, nor are there any existing agricultural land use designations within the Desert Hot Springs General Plan.

c) **Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?**

**No Impact.** The project site and adjacent properties are not currently zoned and are not utilized for forest land, timberland, or within a designated Timberland Production area. As such, the proposed project would not conflict with zoning of forest land, timberland, or timberland production.

d) **Would the project result in the loss of forest land or conversion of forest land to non-forest use?**

**No Impact.** The project site is disturbed desert landscape with minimal vegetation, and the City’s corporate yard is located in the northern portion of the site. The project site and surrounding area does not contain any forest land. Therefore, the proposed project would not result in conversion of forest land to non-forest use.

- e) ***Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?***

**No Impact.** The land surrounding the project site is primarily developed with single- and multi-family residential developments. Vacant land is present within the property directly east of the project site and land further to the west and southwest, but none of the nearby vacant land is used for farmland or timberland. As such, development of the proposed project would not result in conversion of existing farmland or forest land to other uses.

### 3.2.3 Mitigation Measures

No mitigation measures are required.

## 3.3 Air Quality

### 3.3.1 Environmental Setting

#### Existing Conditions

The project site is located within the Salton Sea Air Basin (SSAB) under the jurisdictional boundaries of South Coast Air Quality Management District (SCAQMD). The SSAB portion of Riverside County is separated from the South Coast Air Basin region by the San Jacinto Mountains and from the Mojave Desert Air Basin to the east by the Little San Bernardino Mountains. During the summer, the SSAB is generally influenced by a Pacific Subtropical High Cell that sits off the coast, inhibiting cloud formation and encouraging daytime solar heating. The SSAB is rarely influenced by cold air masses moving south from Canada and Alaska, as these systems are weak and diffuse by the time they reach the desert. Most desert moisture arrives from infrequent warm, moist and unstable air masses from the south. The region averages between 3 and 7 inches of precipitation per year.

#### Criteria Pollutants

The United States Environmental Protection Agency (EPA) is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. The California Air Resources Board (CARB), which is part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and State air pollution control programs within California.

Criteria air pollutants include ozone (O<sub>3</sub>), nitrogen dioxide (NO<sub>2</sub>), carbon monoxide (CO), sulfur dioxide, particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM<sub>10</sub>), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns (PM<sub>2.5</sub>), and lead. Pollutants that are evaluated herein include volatile organic compounds (VOCs) and oxides of nitrogen (NO<sub>x</sub>), which are important because they are precursors to O<sub>3</sub>, as well as CO, sulfur oxides (SO<sub>x</sub>), PM<sub>10</sub>, and PM<sub>2.5</sub>.

SCAQMD administers the SSAB's Air Quality Management Plan (AQMP), which is a comprehensive document outlining an air pollution control program for attaining all California Ambient Air Quality Standards (CAAQS) and NAAQS. The most recent adopted AQMP for the SSAB is the 2016 AQMP (SCAQMD 2017), which was adopted by SCAQMD's Governing Board in March 2017. As indicated in Table 1, the Coachella Valley-portion of the SSAB has

been designated by the EPA and CalEPA as a non-attainment area for O<sub>3</sub> and PM<sub>10</sub>. Currently, the SSAB is in attainment with the remainder of the criteria air pollutants pursuant to NAAQS and CAAQS.

**Table 1. SSAB Criteria Pollutant Attainment Status**

Pollutant	State Status	National Status
Ozone	Nonattainment	Nonattainment
Carbon Monoxide	Attainment	Attainment
Nitrogen Dioxide	Attainment	Unclassified/Attainment
Sulfur Dioxide	Attainment	Attainment
PM <sub>10</sub>	Nonattainment	Nonattainment
PM <sub>2.5</sub>	Attainment	Attainment

Source: SCAQMD 2017

### Methodology

The impact analysis for this section relies on a quantitative analysis conducted by Dudek to determine whether proposed construction activities would result in emissions of criteria air pollutants that may cause exceedances of the NAAQS or CAAQS, or contribute to existing nonattainment of ambient air quality standards. The California Emissions Estimator Model (CalEEMod) Version 2016.3.2 was used to estimate emissions for construction of the proposed project. CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant emissions associated with construction activities from a variety of land use projects, such as residential, commercial, and industrial facilities. CalEEMod input parameters—including the land use type used to represent the project and size, construction schedule, and anticipated construction equipment utilization—were based on information provided by the City and/or default model assumptions.

Appendix G of the CEQA Guidelines indicates that, where available, the significance criteria established by the applicable air district may be relied upon to determine whether a project would have a significant impact on air quality. The SCAQMD has established Air Quality Significance Thresholds, as revised in March 2015, which set forth quantitative emissions significance thresholds below which a project would not have a significant impact on ambient air quality under project-level and cumulative conditions (SCAQMD 2015). The quantitative air quality analysis provided herein applies the SCAQMD thresholds to determine the potential for the project to result in a significant impact under CEQA. The SCAQMD mass daily construction thresholds are as follows: 75 pounds per day for VOCs, 100 pounds per day for NO<sub>x</sub>, 550 pounds per day for CO, 150 pounds per day for SO<sub>x</sub>, 150 pounds per day for PM<sub>10</sub>, and 55 pounds per day for PM<sub>2.5</sub>.

### 3.3.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>III. AIR QUALITY</b> – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project conflict with or obstruct implementation of the applicable air quality plan?***

**Less Than Significant Impact.** The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the regional air quality plans and if it would interfere with the region’s ability to comply with federal and state air quality standards. SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD CEQA Air Quality Handbook (SCAQMD 1993). These criteria are:

- Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.
- Whether the project would exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

To address the first criterion, project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed under Section 3.3.2(b). Detailed results of this analysis are included in Appendix B. As presented in Section 3.3(b), construction and operation of the proposed project would not generate criteria air pollutant emissions that exceed SCAQMD’s thresholds.

The second criterion regarding the project’s potential to exceed the assumptions in the AQMP or increments based on the year of project buildout and phase is primarily assessed by determining consistency between the project’s land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook). SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by the Southern California Association of Governments (SCAG) for its Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) (SCAG 2016). This document, which is based on general plans for cities and counties in the SSAB, is used by SCAQMD to develop the

AQMP emissions inventory (SCAQMD 2017).<sup>1</sup> The SCAG 2016 RTP/SCS and the associated Regional Growth Forecast are generally consistent with the local plans; therefore, the 2016 AQMP is generally consistent with local government plans.

The project site is designated as Residential Low Density (0-5 du/acre) (R-L) on the City's General Plan Land Use Designations map (Desert Hot Springs 2000). This designation typically provides for moderately low-density single-family subdivisions and Planned Residential Developments. In addition, parks are permitted within residential zones within the City. As such, the proposed project is consistent with the existing land use designation and does not propose a change in land use designation. Furthermore, implementation of the project would not generate an increase in growth demographics that would conflict with existing projections within the region. Accordingly, the project is consistent with the SCAG RTP/SCS forecasts used in the SCAQMD AQMP development.

In summary, based on the considerations presented for the two criteria, impacts relating to the project's potential to conflict with or obstruct implementation of the applicable AQMP would be less than significant.

**b) *Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?***

**Less Than Significant Impact.** Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

In considering cumulative impacts from the project, the analysis must specifically evaluate a project's contribution to the cumulative increase in pollutants for which the SSAB is designated as nonattainment for the CAAQS and NAAQS. If a project's emissions would exceed SCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the SSAB. If a project does not exceed thresholds and is determined to have less than significant project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the project's cumulatively considerable contribution is if the project's contribution accounts for a significant proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with SCAQMD's 2016 AQMP, which addresses cumulative emissions in the SSAB.

**Short-Term Construction Emissions**

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and,

---

<sup>1</sup> Information necessary to produce the emissions inventory for the SSAB is obtained from SCAQMD and other governmental agencies, including the California Air Resources Board (CARB), California Department of Transportation (Caltrans), and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socioeconomic and transportation activities projections in their 2016 RTP/SCS are integrated in the 2016 AQMP (SCAQMD 2017).

for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The CalEEMod Version 2016.3.2 was used to estimate emissions from construction of the project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of VOCs, oxides of nitrogen NO<sub>x</sub>, CO, PM<sub>10</sub>, and PM<sub>2.5</sub>. PM<sub>10</sub> and PM<sub>2.5</sub> emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The project would be required to comply with SCAQMD Rule 403.1 to control dust emissions generated during any dust-generating activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active dust areas two times per day, with additional watering depending on weather conditions. The project would involve application of architectural coating (e.g., paint and other finishes) for the self-storage building. The contractor is required to procure architectural coatings from a supplier that complies with the requirements of SCAQMD's Rule 1113 (Architectural Coatings). Table 2 presents the estimated maximum daily construction emissions generated during construction of the project.

**Table 2. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions**

Year	VOC	NO <sub>x</sub>	CO	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
	<i>pounds per day</i>					
2020	4.19	42.50	26.08	0.07	9.52	5.97
<i>SCAQMD Threshold</i>	<i>75</i>	<i>100</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
<b>Threshold Exceeded?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix B

Notes: VOC = volatile organic compound; NO<sub>x</sub> = oxides of nitrogen; CO = carbon monoxide; SO<sub>x</sub> = sulfur oxides; PM<sub>10</sub> = coarse particulate matter; PM<sub>2.5</sub> = fine particulate matter; SCAQMD = South Coast Air Quality Management District.

As shown in Table 2, project construction would not exceed SCAQMD's daily thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

### Long-Term Operational Emissions

Emissions from the operational phase of the project were estimated using CalEEMod. Operational year 2021 was assumed, as it would be the first full year following completion of construction. CalEEMod was used to estimate the following categories of operational emissions:

- **Area Sources:** Includes emissions from consumer product use, architectural coatings, and landscape maintenance equipment.
- **Energy Sources:** Includes emissions associated with electricity and natural gas usage. Electricity use would contribute indirectly to criteria air pollutant emissions; however, the emissions from electricity use are only quantified for GHGs in CalEEMod, since criteria pollutant emissions occur at the site of the power plant, which is typically off site.
- **Mobile Sources:** Includes emissions from the customers and employees of the project. The maximum daily trip rates were taken from the transportation analysis included in Section 3.17 (modeling output included in Appendix B).

Table 3 presents the estimated maximum daily emissions generated during operation of the proposed project.

**Table 3. Estimated Maximum Daily Operation Criteria Air Pollutant Emissions**

Emissions Source	VOC	NOx	CO	SOx	PM10	PM2.5
	Pounds per Day					
Area	0.09	0.00	0.00	0.00	0.00	0.00
Energy	0.00	0.04	0.03	0.00	0.00	0.00
Mobile	0.69	3.55	9.18	0.03	2.67	0.73
<b>Total</b>	<b>0.78</b>	<b>3.59</b>	<b>9.21</b>	<b>0.03</b>	<b>2.67</b>	<b>0.73</b>
<i>SCAQMD Threshold</i>	55	55	550	150	150	55
<b>Threshold Exceeded?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix B

Notes: VOC = volatile organic compound; NO<sub>x</sub> = oxides of nitrogen; CO = carbon monoxide; SO<sub>x</sub> = sulfur oxides; PM<sub>10</sub> = coarse particulate matter; PM<sub>2.5</sub> = fine particulate matter; SCAQMD = South Coast Air Quality Management District.

As shown in Table 3, the project would not exceed SCAQMD's significance thresholds during operations. Therefore, operational impacts associated with criteria air pollutant emissions would be less than significant.

**c) *Would the project expose sensitive receptors to substantial pollutant concentrations?***

**Less Than Significant Impact.** Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). Residential land uses are located near the project in all directions. The closest off-site sensitive receptors to the project site include residences adjacent to the eastern project site boundary.

**Localized Significance Thresholds**

Construction activities associated with the project would result in temporary sources of on-site fugitive dust and construction equipment emissions. Off-site emissions from vendor trucks, haul trucks, and worker vehicle trips are not included in the localized significance threshold (LST) analysis. The maximum allowable daily emissions that would satisfy the SCAQMD localized significance criteria for Source Receptor Area 30 are presented in Table 4 and compared to the maximum daily on-site construction emissions.

**Table 4. Localized Significance Thresholds Analysis for Project Construction**

Pollutant	Project Construction Emissions (Pounds per Day)	LST Criteria* (Pounds per Day)	Exceeds LST?
NO <sub>2</sub>	42.42	304	No
CO	21.84	2,292	No
PM <sub>10</sub>	9.25	14	No
PM <sub>2.5</sub>	5.90	8	No

Source: SCAQMD 2009; Appendix B

Notes: LST = localized significance threshold; NO<sub>2</sub> = nitrogen dioxide; CO = carbon monoxide; PM<sub>10</sub> = coarse particulate matter; PM<sub>2.5</sub> = fine particulate matter.

**Table 4. Localized Significance Thresholds Analysis for Project Construction**

Pollutant	Project Construction Emissions (Pounds per Day)	LST Criteria* (Pounds per Day)	Exceeds LST?
-----------	--	-----------------------------------	--------------

\* LSTs are shown for 5-acre project sites corresponding to a distance to a sensitive receptor of 25 meters (82 feet) for Source Receptor Area 30 (Coachella Valley).

These estimates reflect control of fugitive dust required by Rule 403.1.

The emissions represent worst-case operating scenario during construction.

As shown in Table 4, the project LST would not exceed the established significance thresholds, and thus, would result in a less than significant impact to sensitive receptors.

### **CO Hotspots**

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO “hotspots.” CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (LOS) (LOS E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots.

Title 40 of the Code of Federal Regulations, Section 93.123(c)(5), Procedures for Determining Localized CO, PM<sub>10</sub>, and PM<sub>2.5</sub> Concentrations (Hot-Spot Analysis), states that

CO, PM<sub>10</sub>, and PM<sub>2.5</sub> hot-spot analyses are not required to consider construction-related activities, which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established ‘Guideline’ methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site (40 CFR 93.123).

While project construction would involve on-road vehicle trips from trucks and workers during construction, construction activities would last approximately 12 months and would not require a project-level construction hotspot analysis.

Mobile source impacts occur on two scales of motion. Regionally, project-related travel would add to regional trip generation and increase the vehicle miles traveled (VMT) within the local airshed and the SSAB. Locally, project-generated traffic would be added to the City’s roadway system near the project site. If such traffic occurs during periods of poor atmospheric ventilation, is composed of a large number of vehicles cold-started and operating at pollution-inefficient speeds, and is operating on roadways already crowded with non-project traffic, there is a potential for the formation of microscale CO hotspots in the area immediately around points of congested traffic. Because of continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SSAB is steadily decreasing.

Projects contributing to adverse traffic impacts may result in the formation of CO hotspots. To verify that the project would not cause or contribute to a violation of the CO standard, a screening evaluation of the

potential for CO hotspots was conducted for operation. The potential for CO hotspots was evaluated based on the results of the Traffic Impact Analysis for the project (Appendix B), and the California Department of Transportation (Caltrans) Institute of Transportation Studies Transportation Project-Level Carbon Monoxide Protocol (CO Protocol; Caltrans 2010) was followed. For projects located within an area designated as attainment or unclassified under the CAAQS or NAAQS, the CO Protocol identifies screening criteria for consideration. The first screening criteria focuses on projects that are likely to worsen air quality, which would occur if (1) the project significantly increases the percentage of vehicles operating in cold start mode (greater than 2%), (2) the project significantly increases traffic volumes (greater than 5%), and/or (3) the project worsens traffic flow. In addition to consideration of whether the project would worsen air quality, CO hotspots are typically evaluated when (1) the LOS of an intersection or roadway decreases to LOS E or worse; (2) signalization and/or channelization is added to an intersection; and (3) sensitive receptors, such as residences, schools, and hospitals, are located in the vicinity of the affected intersection or roadway segment. No intersections studies in the Traffic Impact Analysis identified an LOS that would exceed the screening thresholds (Appendix B). Therefore, the project would not cause an intersection to exceed the screening thresholds to necessitate a quantitative CO hotspots analysis.

Accordingly, the project would not generate traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SSAB is steadily decreasing. Based on these considerations, the project would result in a less than significant impact to air quality with regard to potential CO hotspots.

### ***Toxic Air Contaminants***

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics “Hot Spots” Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Project construction would result in emissions of diesel particulate from heavy construction equipment and trucks accessing the site. Diesel particulate is characterized as a TAC by the State of California. The Office of Environmental Health Hazard Assessment has identified carcinogenic and chronic noncarcinogenic

effects from long-term exposure, but has not identified health effects due to short-term exposure to diesel exhaust. According to the Office of Environmental Health Hazard Assessment, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the project. Thus, the duration of the proposed construction activities would only constitute a small percentage of the total 30-year exposure period. Due to this relatively short period of exposure (12 months) and minimal particulate emissions on site, TACs generated by the project would not result in concentrations causing significant health risks. Overall, the project would not result in substantial TAC exposure to sensitive receptors in the vicinity of the proposed project, and impacts would be less than significant.

In addition, the health risk public-notification thresholds adopted by the SCAQMD Board is 10 excess cancer cases in a million for cancer risk and a hazard index of more than one (1.0) for non-cancer risk. The hazard index of more than 1.0 means that predicted levels of a toxic pollutant are greater than the reference exposure level, which is considered the level below which adverse health effects are not expected. Examples of projects that emit toxic pollutants include oil and gas processing, gasoline dispensing, dry cleaning, electronic and parts manufacturing, medical equipment sterilization, freeways, and rail yards (SCAQMD 2017). The project would not emit TACs, and toxic contaminants are not anticipated to be present at the project site; as such, a formal health risk assessment will not be required for the project. Accordingly, the project is not anticipated to result in emissions that would exceed the SCAQMD Board-adopted health risk notification thresholds.

#### ***Health Impacts of Criteria Air Pollutants***

Construction of the project would generate criteria air pollutant emissions; however, the project would not exceed the SCAQMD mass-emission thresholds.

The SSAB is designated as nonattainment for O<sub>3</sub> for the NAAQS and CAAQS. Thus, existing O<sub>3</sub> levels in the SSAB are at unhealthy levels during certain periods. The health effects associated with O<sub>3</sub> generally relate to reduced lung function. Because the project would not involve construction activities that would result in O<sub>3</sub> precursor emissions (VOC or NO<sub>x</sub>) that would exceed the SCAQMD thresholds, the project is not anticipated to substantially contribute to regional O<sub>3</sub> concentrations and associated health impacts. Similar to construction, no SCAQMD threshold would be exceeded during operation.

In addition to O<sub>3</sub>, NO<sub>x</sub> emissions contribute to potential exceedances of the NAAQS and CAAQS for NO<sub>2</sub>. Exposure to NO<sub>2</sub> and NO<sub>x</sub> can cause lung irritation, bronchitis, and pneumonia, and lower resistance to respiratory infections. Project construction and operation would not exceed the SCAQMD NO<sub>x</sub> threshold, and existing ambient NO<sub>2</sub> concentrations are below the NAAQS and CAAQS. Thus, construction and operation of the project are not expected to exceed the NO<sub>2</sub> standards or contribute to associated health effects.

CO tends to be a localized impact associated with congested intersections. CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. CO hotspots were discussed previously as a less than significant impact. Thus, the project's CO emissions would not contribute to the health effects associated with this pollutant.

The SSAB is designated as nonattainment for PM<sub>10</sub> under the NAAQS and CAAQS. Particulate matter contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems,

including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing (EPA 2016). As with O<sub>3</sub> and NO<sub>x</sub>, the project would not generate emissions of PM<sub>10</sub> that would exceed SCAQMD's thresholds. Accordingly, PM<sub>10</sub> emissions from the proposed project are not expected to cause any increase in related regional health effects for these pollutants.

In summary, the proposed project would not result in any potentially significant contribution to regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants. Therefore, impacts associated with localized air emissions would be less than significant.

**d) *Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?***

**Less Than Significant Impact.** The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

**Short-Term Construction Impacts**

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the project. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors would disperse rapidly from the project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, short-term construction impacts associated with odors would be less than significant.

**Long-Term Operational Impacts**

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SCAQMD 1993). The project would not create any new sources of odor during operation. Therefore, there would be no long-term operational impacts associated with odors.

### 3.3.3 Mitigation Measures

No mitigation measures are required.

## 3.4 Biological Resources

### 3.4.1 Environmental Setting

#### Methodology

The following analysis relies on a biological resources assessment conducted by Dudek biologist Britney Strittmater in September 2019. This assessment included a pre-field review of the latest available relevant literature, published research, maps, soil data, data on biological baselines, special-status vegetation communities, and special-status species distributions to determine those resources that have the potential to occur within the project site and surrounding 100-foot buffer (the study area). Dudek used the following definitions of special-status biological resources for the CEQA analysis:

- Plants – species listed as threatened or endangered under the federal and state Endangered Species Acts (ESAs); species listed as rare, special, or Species of Special Concern as defined by the California Department of Fish and Wildlife (CDFW); and species with a California Rare Plant Rank of 1 or 2 as defined by the California Native Plant Society (CNPS)
- Wildlife – species listed as threatened or endangered under the federal and state ESAs; Birds of Conservation Concern as defined by the U.S. Fish and Wildlife Service (USFWS); and species with state designations such as Migratory Nongame Birds of Management Concern, California Species of Special Concern, Special Animals List species, and Fully Protected species as defined by the CDFW
- Vegetation communities – natural communities designated as sensitive by CDFW (Global Rank 1-3, State Rank 1-3) and riparian habitat

A search of the California Natural Diversity Database (CNDDB) (CDFW 2019) and the California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants (CNPS 2019) was conducted to identify sensitive biological flora and fauna documented for the U.S. Geological Survey Desert Hot Springs 7.5-minute quadrangle where the site occurs and the eight surrounding 7.5-minute quadrangles (i.e., Catclaw Flat, Morongo Valley, Yucca Valley South, White Water, Seven Palms Valley, San Jacinto Peak, Palm Springs, and Cathedral City).

Following the pre-field literature review, Ms. Strittmater conducted a reconnaissance-level survey of the study area on September 17, 2019 to identify existing biological resources and confirm potential biological constraints. The site visit occurred from 8:40 a.m. to 9:45 a.m. Temperature ranged from 82 to 83 degrees Fahrenheit, there was no cloud cover, and winds ranged from 2 to 5 miles per hour. During the field survey, vegetation communities and land covers on site were mapped directly in the field onto a 200-foot-scale (1 inch = 200 feet), aerial photograph-based field map of the study area. Following completion of the fieldwork, all vegetation polygons were digitized using ArcGIS and a geographic information system (GIS) coverage was created. Natural vegetation communities were mapped in the field following CVMHSCP (CVAG 2016) where feasible, with modifications to accommodate the lack of conformity of the observed communities to those of *A Manual of California Vegetation*, second edition (Sawyer et al. 2009) or Oberbauer et al. (2008). Additionally, a general inventory of plant and wildlife species detected by sight, calls, tracks, scat, or other field indicators were compiled, and a determination was made concerning the potential for special-status species to occur within the study area. Note that the survey was not conducted during the peak bloom period for most flowering plants; however, the goal of the survey was to identify suitable habitat for special status species and was not an inventory of flora and fauna. Additionally, a preliminary investigation of the extent and distribution of U.S. Army Corps of Engineers (ACOE) jurisdictional waters of the U.S.,

Regional Water Quality Control Board (RWQCB) jurisdictional waters of the state, and CDFW jurisdictional streambed and associated riparian habitat was conducted.

## Existing Conditions

### Vegetation Communities

The study area is comprised of one vegetation community: Sonoran creosote bush scrub (7 acres) (CVAG 2016), as well as two non-natural land covers: urban/developed (2.75) and disturbed habitat (0.25) (Oberbauer et al. 2008).

**Sonoran Creosote Bush Scrub:** This community is dominated by creosote bush (*Larrea tridentata*) occurring on well-drained soils (CVAG 2016). Within the study area, Sonoran creosote bush scrub is dominated by an open to intermittent mix of creosote bush, white bursage (*Ambrosia dumosa*), cheesebush (*Ambrosia salsola*), and fourwing saltbush (*Atriplex canescens*) with a sparse understory comprised of common Mediterranean grass (*Schismus barbatus*) and Tournefort's mustard (*Brassica tournefortii*). The *Larrea tridentata* alliance has a rank of G5S5 in CDFW (CDFW 2018), meaning that it is globally secure and secure in the state. Therefore, CDFW does not consider the creosote bush scrub alliance a sensitive biological resource under CEQA (CDFW 2018). Sonoran creosote bush scrub is within the CVMSHCP and is considered a covered vegetation community (CVAG 2016).

**Disturbed Habitat:** The CVMSHCP does not describe disturbed habitat; however, this land cover type is described in Oberbauer et al. (2008) and refers to areas that have been permanently altered by previous human activity that has eliminated all future biological value of the land for most species. The native or naturalized vegetation is no longer present, and the land lacks habitat value for sensitive wildlife, including potential raptor foraging. Disturbed land on site consists of areas that have been previously graded and devoid of vegetation. Disturbed habitat is not a vegetation community; therefore, it is not considered a sensitive biological resource under CEQA (CDFW 2018).

**Urban/Developed Land:** The CVMSHCP does not describe urban/developed land; however, this land cover type is described in Oberbauer et al. (2008) and includes areas that have been constructed upon or otherwise physically altered to an extent that native vegetation is no longer supported. Developed land is characterized by permanent or semi-permanent structures, pavement or hardscape, and landscaped areas that often require irrigation (Oberbauer et al. 2008). Within the study area, developed areas include paved roads, permanent structures, residential development and associated landscaping. Developed land is not a vegetation community; therefore, it is not considered a sensitive biological resource under CEQA (CDFW 2018).

### Soils

One soil type is mapped in the study area: Carsitas fine sand, 0% to 5% slopes (USDA 2019). The Carsitas series consists of very deep, somewhat excessively drained soils that are formed in alluvium from granitoid and/or gneissic rocks. These soils are typically found on alluvial fans, valleys, and drainage ways (USDA 2019). This soil series make up the entirety of the study area, including the project site. Figure 3 shows the soils mapped within the project site.

### Wildlife

Wildlife diversity was limited due to the monotypic nature of the project site and developed nature of the surrounding area. Wildlife species detected within the study area were limited to mourning dove (*Zenaida macroura*), house finch (*Haemorhous mexicanus*) northern mockingbird (*Mimus polyglottos*) and rock pigeon (*Columba livia*). No active bird nests were observed during the site visit; however, the survey was conducted outside of the nesting season. The ornamental vegetation and sparse creosote bush provide potential habitat for nesting birds. One mammal species was found during the survey: domestic dog (*Canis lupus familiaris*).

### **Jurisdictional Waters**

Although a formal wetlands delineation was not conducted for the proposed project, the site was evaluated for the potential to support jurisdictional waters under the federal Clean Water Act, California Fish and Game Code, and state Porter-Cologne Act during the site visit. No drainage features or riparian vegetation were documented within the study area.

### **Coachella Valley Multiple Species Habitat Conservation Plan**

The CVMSHCP is a joint regional planning effort of the USFWS, the CDFW, the Bureau of Land Management, the U.S. Forest Service, and the National Park Service, as well as Riverside County and most jurisdictions in the Coachella Valley, including the City of Desert Hot Springs. The DLVSP is within the planning area for the CVMSHCP. This regional multi-agency conservation plan provides for the long-term conservation of approximately 240,000 acres of open space and 27 plant and animal species in the Coachella Valley. The stated overall goal of the CVMSHCP is, "...to enhance and maintain the biological diversity and ecosystem processes while allowing future economic growth." The CVMSHCP balances environmental protection and economic development objectives in the Plan area and simplifies compliance with endangered species laws.

The CVMSHCP is subdivided according to specific resource conservation goals that have been organized according to geographic areas defined as Conservation Areas that serve as natural habitat for covered species. These areas are identified as Core, Essential, or Other Conserved Habitat for special-status plant, invertebrate, amphibian, reptile, bird, and mammal species, Essential Ecological Process Areas, and Biological Corridors and Linkages. The CVMSHCP area is divided into Conservation Areas based on a combination of ecological and jurisdictional factors. Per the CVMSHCP, 90 percent of the land within the Conservation Area is to remain open space and 10 percent may be developed. For each Conservation Area, Conservation Objectives and required measures are articulated for conserving Core Habitat for covered species, Essential Ecological Processes necessary to maintain habitat viability, Biological Corridors and Linkages as needed, and the less common Conserved Natural Communities. The project site is not within a designated CVMSHCP conservation area.

Under the CVMSHCP, a Take Authorization, except for three of the covered species, is allowed for covered activities in accordance with the federal ESA and the California Natural Community Conservation Planning Act. Covered activities include development permitted or approved by local permittees, which includes new projects approved pursuant to county and city general plans. Take activities are limited within Conservation Areas. Development impacts on the covered species and their habitats are mitigated through payment of a fee, which is used by the Coachella Valley Conservation Commission to minimize and mitigate impacts of the taking and provide for conservation of the covered and non-covered species through the acquisition and maintenance of habitat.

### 3.4.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>IV. BIOLOGICAL RESOURCES – Would the project:</b>				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) ***Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?***

**Less Than Significant Impact With Mitigation Incorporated.** The proposed project, known as Corporate Yard Park, includes development of approximately 7.5 acres of a 10-acre site as a community park. The remainder of the site would operate as the City’s corporate yard. The proposed project would provide parks amenities for City residents identified in the Parks and Recreation Master Plan, reducing deficits for sports fields. The proposed project would be open for public use. The proposed project would include the following improvements: football field, baseball field, common area, corporate yard, parking, on-site drainage

improvements and utilities. The study area includes the proposed project, plus a 500-foot buffer around the project site.

### **Special-Status Plant Species**

The study area is comprised of creosote bush scrub, disturbed habitat, and urban/developed lands. No plant species listed or proposed for listing as rare, threatened, or endangered by either the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service were detected within the study area during the reconnaissance survey. Additionally, no plant species considered sensitive by the CNPS were observed. Dudek performed a review of literature, existing documentation, and GIS data to evaluate the potential for special-status plant species to occur within the study area. Each special-status plant species was given a rating of not expected, low, medium, or high based on relative location to known occurrences, vegetation communities, soils, and elevation. Based on the results of the literature review and database searches, 21 special-status plant species were identified as previously occurring within the region. Of these, no federally- or state-listed species have a low, moderate, or high potential to occur. All of the other non-listed special-status species were determined to have low or no potential to occur within the study area. This was largely due to the developed nature of the surroundings, the vegetation communities present, elevation ranges, previous known locations and species range. The complete results of this potential to occur evaluation for special-status plants are included as Appendix C of this document. Additionally, there is no U.S. Fish and Wildlife Service-designated critical habitat for listed plant species within the project site. However, U.S. Fish and Wildlife Service-designated critical habitat for one listed species, Coachella Valley milk vetch, occurs within the study area, southwest of the intersection of Cholla Drive and Hacienda Avenue. Coachella Valley milk vetch is a Covered Species under the CVMSHCP. Since the proposed project would be considered a Covered Activity under the CVMSHCP upon project approval, "take" of species covered under the CVMSHCP (including Coachella Valley milk vetch) during construction and operation of the proposed project would be authorized with payment of the required CVMSHCP mitigation fee. Therefore, impacts to special-status species would be less than significant.

### **Special-Status Wildlife Species**

The study area is comprised of creosote bush scrub, disturbed habitat, and urban/developed lands. No wildlife species listed or proposed for listing as rare, threatened, or endangered by either the CDFW or USFWS were detected within the study area during the reconnaissance survey. Dudek performed a review of literature, existing documentation, and GIS data to evaluate the potential for special-status wildlife species to occur within the study area. Each special-status wildlife species was given a rating of not expected, low, moderate, or high based on relative location to known occurrences, vegetation communities, elevation and species range. Based on the results of the literature review and database searches, 38 special-status wildlife species were identified as occurring within the region. Of the 38 special-status species, only one was determined to have a moderate potential to occur: burrowing owl (*Athene cunicularia*), a California Species of Special Concern and covered species under the CVMSHCP. While the site visit did not document any suitable burrows and no ground squirrel activity was observed, this species is known to occur within the immediate vicinity and debris piles were documented within the proposed project footprint that may provide suitable nesting habitat or refuge. All of the other species were determined to have low or no potential to occur within the study area. This was largely due to the developed nature of the surroundings, the vegetation communities present, elevation ranges, previous known locations and species range. The complete results of this potential to occur evaluation for special-status plants are included as Appendix C of this document.

The project site and study area contain shrubs and ornamental trees that would potentially be used by migratory birds for breeding. Direct impacts to migratory nesting birds must be avoided to comply with the Migratory Bird Treaty Act (16 U.S.C. 703–712) and California Fish and Game Code. The project would require removal of some shrubs and ornamental trees; therefore, the project site potential to directly impact nesting bird species. Indirect impacts to nesting birds from short-term, construction-related noise could result in decreased reproductive success or abandonment of an area as nesting habitat if construction were conducted during the breeding/nesting season (i.e., February through August). To avoid potential indirect impacts to nesting birds, and in conformance with the requirements of the Migratory Bird Treaty Act and California Fish and Game Code, **MM BIO-1** would be implemented. Therefore, with implementation of **MM BIO-1**, direct and indirect impacts to nesting birds from construction-related activities would be less than significant.

The project site includes debris piles within the existing corporate yard that could act as suitable nesting habitat for burrowing owl. The remainder of the project site contains compacted soils, and no ground squirrel activity or burrows were detected. To avoid potential direct or indirect impacts to burrowing owl, implementation of **MM BIO-2** will reduce impacts to burrowing owl to less than significant.

Furthermore, to address potential for indirect impacts associated with night lighting towards species that may be present in the partially adjacent CVMSHCP Conservation Area (southwest of the intersection of Cholla Drive and Hacienda Avenue), use of shields and downward directing of lighting would reduce opportunities for sky glow/light pollution.

- b) *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?***

**No Impact.** No special-status or sensitive vegetation communities are present within the study area or impact footprint. As a result, there would be no direct or indirect impacts to riparian vegetation or other sensitive or special-status vegetation communities.

- c) *Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?***

**No Impact.** No federally defined waters of the United States or state occur within the project site. This includes the absence of federally defined wetlands and other waters (e.g., drainages) and state-defined waters (e.g., streams and riparian extent). The project would be subject to the typical restrictions (e.g., BMPs) and requirements that address erosion and runoff, including those of the Clean Water Act and National Pollutant Discharge Elimination System (NPDES) permit. With implementation of BMPs and permit conditions, no indirect impacts would occur. It is assumed that all construction activities would be limited to developed and/or disturbed land covers. Therefore, no direct or indirect impacts to jurisdictional waters or wetlands would occur.

- d) *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?***

**No Impact.** The northern portion of the project site is currently developed and utilized for the Desert Hot Springs Corporate Yard, while the remainder of the site is generally flat, undeveloped land with sparse

vegetation comprised of creosote bush. However, the project site is located in an area largely developed with residential land uses and is bound by Flora Avenue to the north, Cholla Drive to the west, Hacienda Avenue to the south, and existing multi-family residential development to the east. Due to the matrix of development surrounding the project site, the proposed project does not constrain natural wildlife movement in its vicinity. Vacant land southwest of the project site is designated as Conservation Land under the Coachella Valley Multiple Species Habitat Conservation Plan and may provide wildlife movement. However, the project site is not within any designated wildlife corridors and/or habitat linkages identified in the South Coast Missing Linkages analysis project (South Coast Wildlands 2008), California Essential Habitat Connectivity project (Spencer et al. 2010), or as recognized by the CVMSHCP. Therefore, no direct or indirect impacts to wildlife movement would occur.

- e) ***Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?***

**No Impact.** The City does not have any policies or ordinances protecting biological resources that are applicable to the proposed project.

- f) ***Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?***

**Less Than Significant Impact.** The proposed project is located within the overall CVMSHCP area but not within a designated Conservation Area. The lead agency for this project is the City, which is a Permittee in the CVMSHCP. Compliance with the CVMSHCP provides Permittees with take authorization for covered species for all covered activities, which includes development outside of conservation areas. Although the project site is outside of a Conservation Area, the site is located partially adjacent to the Upper Mission Creek/Big Morongo Canyon Conservation Area, southwest of the intersection of Cholla Drive and Hacienda Avenue. Therefore, the avoidance, minimization, and mitigation measures for covered activities that apply to projects adjacent to Conservation Areas would apply (CVMSHCP Section 4.4). To address potential for indirect impacts associated with night lighting towards species that may be present in the Conservation Area use of shields and downward directing of lighting would reduce opportunities for sky glow/light pollution.

The project is a covered activity and compliance with the CVMSHCP would provide take authorization for covered species. A fee is required for all projects located within the CVMSHCP plan area. The CVMSHCP mitigation fee is used by the Coachella Valley Conservation Commission to minimize and mitigate impacts from the taking of, and provide conservation for, covered and non-covered species through the acquisition and maintenance of habitat. With payment of this fee, the project would be consistent with the CVMSHCP.

### 3.4.3 Mitigation Measures

- MM-BIO-1 Preconstruction Nesting Bird Survey and Avoidance Measures.** In conformance with the requirements of the Migratory Bird Treaty Act and California Fish and Game Code, should vegetation clearing, cutting, or removal activities be required during the nesting season (i.e., February 1 through August 31), a qualified biologist shall conduct a nesting bird survey within 72 hours of such activities. The survey shall consist of full coverage of the project footprint and an appropriate buffer, as determined by the biologist. If no occupied nests are found, no additional steps shall be required. If nests are found that are being used for breeding or rearing young by a native bird, the biologist shall recommend further avoidance measures, including establishing an

appropriate buffer around the occupied nest. The buffer shall be determined by the biologist based on the species present, surrounding habitat, and existing environmental setting/level of disturbance. No construction or ground-disturbing activities shall be conducted within the buffer until the biologist has determined that the nest is no longer being used for breeding or rearing.

**MM-BIO-2 Preconstruction Burrowing Owl Surveys and Avoidance Measures.** Two preconstruction surveys for burrowing owl shall be conducted prior to any site preparation or construction activities to ensure that burrowing owls have not occupied the project site. The surveys shall follow the *Staff Report on Burrowing Owl Mitigation* (CDFW 2012), which states the first survey will occur within 30 days prior to site disturbance and the second will occur within 24 hours. If burrowing owls are detected on site, a passive relocation plan shall be prepared following accepted protocol and approved by CDFW. The passive relocation plan shall be subject to the review and approval of CDFW prior to any site disturbance.

## 3.5 Cultural Resources

### 3.5.1 Environmental Setting

#### Existing Conditions

The existing conditions and impact analysis for this section rely on a records search prepared for the proposed project to assess information on all documented cultural resources and previous archaeological investigations within one mile of the project site, examination of historic aerials and maps, and a pedestrian survey conducted by Dudek on February 6, 2020. The cultural resources records search was conducted on October 22, 2019, at the Eastern Information Center (EIC) at University of California, Riverside by Dudek personnel. Non-confidential findings from the records search are included in Appendix D. Resources consulted during the records search conducted at EIC included the National Register of Historic Places (NRHP), California Historical Landmarks, California Points of Historical Interest, and the California State Historic Resources Inventory.

Based upon the records search, 47 cultural resource studies have previously been completed within the project site and one-mile buffer area. A total of 38 previously recorded cultural resources were identified within the study area. None of 38 resources identified within the study area are located within or near the project site.

### 3.5.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>V. CULTURAL RESOURCES</b> – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?***

**No Impact.** A records search was conducted by Dudek personnel on October 22, 2019 at the EIC, located at University of California Riverside (Appendix D). This search provided information on all documented cultural resources and previous archaeological investigations within one mile of the project area. Results of the records search and additional research are detailed below in Section 3.5(b).

The records search resulted in the identification of 47 previously conducted projects with the one mile study area and of these 47 projects, three (3) have either intersected or bordered the current project area. In addition, the records search indicates that 38 previously recorded cultural resources were located within the 1-mile study area buffer. Based upon the records search conducted at the EIC, none of the 38 previously recorded cultural resources were located within (or near) the current project area.

In addition, Dudek consulted historic maps and aerial photographs to understand development of the proposed project area and surrounding properties. (NETR 2020a). Historic aerials are available for the years 1972, 1996, 2002, 2005, 2009, 2010, 2012, 2014, and 2016. Topographic maps are available for the years 1944, 1955, 1956, 1960, 1961, 1963, 1972, 1973, 1987, 2012, 2015, and 2018 (NETR 2020b).

The first USGS topographic map showing the proposed project area dates to 1944 and depicts the project area as undeveloped with a north-south oriented drainage extending through the western portion of the parcel. An unlabeled street grid is visible to the east. No changes are apparent until 1956 when additional development in and around the project area can be seen. Throughout the 1960s and 1970s additional residential development is shown in the subdivisions surrounding the project area. The two streets that are currently depicted extending north-south at the southern Project Area boundary are first visible on the 1973 topographic map.

The first available aerial image available for the project site dates to 1972. In it, the two north-south streets at the southern project site boundary are visible and the remainder of the project site remains undeveloped. The next available aerial was taken in 1996 and shows the Corporate Yard for the first time in the northwest of the project site. Flora Avenue remains a dirt road at this point. The 2005 aerial depicts Flora Avenue as a paved road and the housing development immediately north of the project site is complete. Between the 2005 and 2009 aerials, the residential tract west of the project site was developed. Between 2010 and 2012 additional development is seen filling in the open space to the northeast of the project site. By this time the project site had taken on the current appearance.

Examination of the aerial photographs and historic topographic maps shows changes in the Project site and vicinity through time and suggests the project area remains relatively undisturbed. The development of the Corporate Yard and the encroachment of residential development has likely affected soils with the potential to support the presence of archaeological material within of the project area

On February 6, 2020, a Dudek archaeologist completed an archaeological survey of the project site. The project site was surveyed using transects spaced no greater than 10 meters apart and oriented in an east-west direction. The archaeologist examined exposed ground surface for artifacts (e.g., flaked stone tools, tool-making debris, milling tools, ceramics), ecofacts (e.g., marine shell and bone), soil discoloration that might indicate the presence of a cultural midden, and features indicative of the former presence of structures or buildings (e.g., standing exterior walls, postholes, foundations) or historic debris (e.g., metal, glass, ceramics). Ground disturbances such as animal burrows or natural subsurface exposures were visually inspected for cultural resources.

The project site is within a previously disturbed context consisting of the Corporate Yard and associated facilities, existing asphalt access road and parking areas, dirt roads, and cleared areas. A fence surrounding the facility was present and prevented the project site to be surveyed in its entirety. Overall, ground visibility was excellent (95 percent). Within the project, the soil is a light brown, fine- to medium-grained, silty sand with angular inclusions. Abundant modern trash was littered across the project site. Modern debris such as gravel, glass, wood, and asphalt were observed.

No historic or prehistoric resources were identified during the field survey. The project site has been previously impacted by development and modern usage. Since the project site is in a disturbed context, the likelihood of encountering previously unrecorded resources is low.

Pursuant to CEQA Guidelines, Section 15064.5(a)(3), a resource may be considered to be “historically significant” by the lead agency if the resource meets the criteria for listing. A resource is eligible for listing in the California Register of Historical Resources if the State Historical Resources Commission determines that it is a significant resource and that it meets any of the following National Register of Historic Places criteria (California Public Resources Code, Section 5024.1(c)):

1. Associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Associated with the lives of persons important in our past.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

Resources less than 50 years old are not considered for listing in the California Register of Historical Resources, but they may be considered if it can be demonstrated that sufficient time has passed to understand the historical importance of the resource (see 14 CCR 4852(d)(2)). No historic built environment resources were identified within the project site as a result of the records search. Therefore, the proposed project would have no impact to historic built environment resources.

**b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?**

**Less Than Significant Impact with Mitigation Incorporated.** The records search described above identified 47 previously conducted projects with the one-mile study area and of these 47 projects, three intersect the current project area. In addition, the records search indicates that 38 previously recorded cultural resources were located within the one-mile study area buffer. None of the 38 previously recorded cultural resources were located within (or near) the project site.

Table 5 lists previous cultural resources studies within the current study area (project area plus one-mile buffer).

Source: Appendix D

Based upon the records search conducted at the EIC, 38 previously recorded cultural resources were identified within the study area. Of the 38 resources identified with the study area, none (see Table 6) are within or very near the current project area. The majority of resources are single family residences and a few are insignificant historic trash scatters. No prehistoric resources have been identified in the study area. No previously identified resources within the study area have been individually or collectively listed on the NRHP or the CRHR.

Table 6 lists previous cultural resources within the current study area (project area plus one-mile buffer).

**Table 6. Previous Cultural Resources within the Study Area**

Primary Number	Trinomial	Resources Name	Resource Description
P-33-006844	N/A	Coffee's Spa and Hotel	Vernacular wood frame structure and associated hot pool built in 1948 and led to the founding of Desert Hot Springs
P-33-006845	N/A	Desert Hot Springs Library and Museum	Vernacular wood frame structure built between 1946 and 1955 as the first library and museum in Desert Hot Springs
P-33-006848	N/A	Christensen Residence	Vernacular stone single family residence at 66036 Pierson Blvd. constructed before 1946
P-33-006849	N/A	Cliff's Shop	Vernacular wood frame structure built in 1951 as the first auto repair shop in Desert Hot Springs
P-33-006850	CA-RIV-12674	Desert Hot Springs School House	Vernacular wood frame structure built in 1935
P-33-006887	N/A	66011 1 <sup>st</sup> Street	Vernacular adobe and stone structure with Pueblo Revival elements built in 1946
P-33-006888	N/A	66321 1 <sup>st</sup> Street	Vernacular wood frame single family residence built in 1935
P-33-006889	N/A	66029 1 <sup>st</sup> Street	Vernacular adobe and stone single family residence built in 1951
P-33-006890	N/A	66031 1 <sup>st</sup> Street	Vernacular adobe and stone single family residence built in 1935
P-33-006891	N/A	66435 1 <sup>st</sup> Street	Vernacular wood frame structure built in 1946 as the first fire hall/house in Desert Hot Springs
P-33-006892	N/A	66135 2 <sup>nd</sup> Street	Vernacular brick single family residence with Mediterranean/Spanish Revival elements built in 1946
P-33-006893	N/A	66191 2 <sup>nd</sup> Street	Vernacular wood frame single family residence built in 1941

Source: Appendix D

No archaeological resources were identified within the Project Area or immediate vicinity as a result of the records search. The resources located within the one-mile study area of the Project lack integrity and all have been recommended not eligible for listing in the National Register of Historic Places (NRHP) or the California Register of Historic Resources (CRHR).

On September 26, 2019, Dudek (on behalf of the Desert Hot Springs Public Works Department) requested a Sacred Land File (SLF) search from the Native American Heritage Commission (NAHC). On October 15, 2019, the NAHC responded to the request indicating the result of the SLF search was positive and suggested the DHS Public Works Department contact 14 tribes (21 total contacts including tribal representatives) that may have interest in or knowledge of tribal cultural resources within the project site and vicinity. These tribes or tribal representatives include the Agua Caliente Band of Cahuilla Indians, the Augustine Band of Cahuilla Mission Indians, the Cabazon Band of Mission Indians, the Cahuilla Band of Indians, the Los Coyotes Band of Cahuilla and Cupeño Indians, the Morongo Band of Mission Indians, the Ramona Band of Cahuilla, the San Fernando Band of Mission Indians, the San Manuel Band of Mission Indians, the Santa Rosa Band of Cahuilla Indians, the Serrano Nation of Mission Indians, the Soboba Band of Luiseno Indians, the Torres-Martinez Desert Cahuilla Indians, and the Twenty-Nine

Palms Band of Mission Indians. The City led the Assembly Bill 52 efforts and led consultation with these tribes. All tribal consultation records are on file at the DHS Public Works Department and consultation efforts are summarized in Section 3.12.1 of this IS/MND.

Intensive-level pedestrian archaeological survey did not result in the identification of any cultural resources within the project area. The Project Area is within a largely developed and previously disturbed area, which means much of the ground disturbance would be within areas of low sensitivity for cultural resources or archaeological deposits. However, despite the low probability of encountering archaeological deposits, it is always possible that such deposits exist subsurface.

Based on ongoing formal tribal consultation efforts by the City, pursuant to AB 52, and the possibility for presence of subsurface archaeological resources, five mitigation measures were recommended to reduce potential impacts associated with unknown subsurface archaeological or tribal cultural resources. **MM-CUL-1** would require all mitigation measures in this document and Conditions of Approval for the project to be implemented. **MM-CUL-2** would require archaeological and tribal monitoring during ground disturbing activities. **MM-CUL-3** outlines the process required for treatment and disposition of inadvertent finds. **MM-CUL-4** requires preparation of a Cultural Resources Monitoring Report upon completion of all ground-disturbing activities. **MM-CUL-5** outlines the required process in the event human remains are uncovered. With the implementation of **MM-CUL-1 through MM-CUL-5**, impacts associated with archaeological resources would be less than significant.

**c) *Would the project disturb any human remains, including those interred outside of dedicated cemeteries?***

**Less Than Significant Impact with Mitigation Incorporated.** The discovery of human remains is always a possibility during ground disturbance. The State of California Health and Safety Code Section 7050.5, State CEQA Guidelines 15064.5(e), and California Public Resources Code (PRC) Section 5097.98 mandate the process to be followed in the unlikely event of an accidental discovery of any human remains in a location other than a dedicated cemetery. Specifically, in accordance with PRC 5097.98, the Riverside County Coroner must be notified within 24 hours of the discovery of potential human remains. The Coroner must then determine within two working days of being notified if the remains are subject to his or her authority. If the Coroner recognizes the remains to be Native American, he or she must contact the Native American Heritage Commission (NAHC) by phone within 24 hours, in accordance with PRC 5097.98. The NAHC then designates a Most Likely Descendant (MLD) with respect to the human remains within 48 hours of notification. The MLD would then have the opportunity to recommend to the project proponent means for treating or disposing, with appropriate dignity, the human remains and associated grave goods within 24 hours of notification. This requirement is incorporated as **MM CUL-5**, in order to provide standard procedures in the event that human remains are encountered during proposed construction. With implementation of **MM CUL-5**, impacts to human remains would be less than significant.

### 3.5.3 Mitigation Measures

**MM-CUL-1** The applicant/developer shall implement all mitigation measures and monitoring program requirements outlined in the City's Mitigation Measures, Conditions of Approval or associated project Environmental Documents.

**MM-CUL-2** Prior to any project grading, excavation and/or ground disturbing activities, the Project Applicant shall retain an Registered Professional Archaeologist as an Archaeological Monitor, to be overseen by an archaeologist meeting Secretary of Interior Standards (Project Archaeologist), and designated

Native American Monitors from the consulting tribe(s)(Tribal Monitor) to observe initial ground disturbing activities (including vegetation removal and grading) on a part-time schedule. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. The Archaeological Monitor and Tribal Monitor will be present onsite two days per week of initial ground disturbance. Should buried cultural resources be encountered, the monitors may request that ground disturbance halt within 100 feet of the find. If found to be archaeological in nature by the Archaeological Monitor, or found to be a Tribal Cultural Resource as defined by Pub Resources Code § 21074 (a), the following additional action will be taken:

- a) In the case that the resource is an isolate, defined as two or less artifacts or artifacts in a secondary context, the Archaeological Monitor will evaluate the significance of the find in consultation with the City and the consulting Tribe. The Archaeological Monitor will verify there are no other associated features or artifacts, and will then map the isolate's location and document the artifact in accordance with the State of California Department of Parks and Recreation (DPR) 523 series forms. Isolates will not be collected unless they are exceptional diagnostic artifacts, or determined significant in coordination with the consulting tribe(s). Examples of isolates that would be collected and temporarily curated include, but are not limited to projectile points, beads, pendants, and ceramic rim sherds. All analysis of recovered items shall be limited to basic recordation. Any additional analysis shall be limited to non-destructive methods. Resources shall be temporarily curated in a secure location onsite or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process.
- b) In the case that the resource is a site, defined as three or more artifacts within a 30 meter area that retain locational integrity of context, or found to be a Tribal Cultural Resource as defined by Pub Resources Code § 21074 (a), the Archaeological Monitor will establish a 100-foot avoidance buffer around the find and will notify the Project Archaeologist. The Project Archaeologist will evaluate the significance of the find in consultation with the City and the consulting Tribe. Identified resources will then map the isolate's location and document the artifact in accordance with the State of California Department of Parks and Recreation (DPR) 523 series forms. If necessary, the Project Archaeologist will prepare a mitigation plan for submission to the City describing recommended preservation or mitigation of the resource, possibly including avoidance or data recovery, and relocation of the resource. Only after the City approves of the mitigation plan and the resource is appropriately managed, will construction within the 100 buffer recommence. If the resource may be eligible as a Tribal Cultural Resource, as determined by the City in consultation with the Tribe.

**MM-CUL-3 Treatment and Disposition of Inadvertently Discovered Tribal Cultural Resources.** In the event that Tribal Cultural Resources including sacred items, burial goods, and all archaeological artifacts are inadvertently discovered during the course of grading for this project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location onsite or at the offices of the

project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process; and

2. Treatment and Final Disposition: Ownership shall be relinquished for all Tribal Cultural Resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Riverside Community and Economic Development Department with evidence of same:
  - a) Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources. This will require revisions to the grading plan, denoting the location and avoidance of the resource.
  - b) Accommodate the process for onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed; location information regarding the reburial location shall be included into the final report required under MM-CUL-5. Copies of the report shall be provided to the City for their records, the Consulting Tribe(s), and the Eastern Informational Center.
  - c) A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation:

**MM-CUL-4**

A Final Cultural Resources Monitoring Report shall be submitted to the City, Eastern Information Center (EIC), and the Consulting Tribe(s) at the conclusion of the Project. The report will include a summary of the monitored activities conducted by the Archaeological Monitor and the Tribal Monitor. The report will include:

- a) How each mitigation measure was fulfilled
- b) All daily logs from Archaeological Monitors
- c) Any DPR forms for inadvertent discoveries
- d) Reburial locations for final disposition of recovered Tribal Cultural Resources and items of Cultural Patrimony

A draft of the Final Report must be submitted to the City within 6 weeks of the completion of all ground disturbing activities, as required by the City. The Final report must be submitted to the City within 30 days of receiving any comments from the City. All DPR forms will be submitted to the EIC after City approval.

**MM-CUL-5**

In the event that human remains (or remains that may be human) are discovered at the project site during grading or earthmoving, the construction contractors, Project Archaeologist, and/or designated Tribal Monitor shall immediately stop all activities within 100 feet of the find. The

project proponent shall then inform the Riverside County Coroner and the City of Desert Hot Springs immediately, and the coroner shall be permitted to examine the remains as required by California Health and Safety Code Section 7050.5(b). Section 7050.5 requires that excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If human remains are determined as those of Native American origin, the applicant shall comply with the state relating to the disposition of Native American burials that fall within the jurisdiction of the Native American Heritage Commission (NAHC) (PRC Section 5097). The coroner shall contact the NAHC to determine the most likely descendant(s) (MLD). The MLD shall complete his or her inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. The disposition of the remains shall be overseen by the MLD(s) to determine the most appropriate means of treating the human remains and any associated grave artifacts. The specific locations of Native American burials and reburials will be proprietary and not disclosed to the general public. In the event that the project proponent and the MLD are in disagreement regarding the disposition of the remains, State law will apply and the median and decision process will occur with the NAHC (see Public Resources Code Section 5097.98(e) and 5097.94(k)).

## 3.6 Energy

### 3.6.1 Environmental Setting

#### Existing Conditions

##### **Electricity**

Southern California Edison (SCE) is the utility providers in the area surrounding the project site. According to the California Energy Commission, SCE customers consumed approximately 84 billion kilowatt-hours of electricity and MVU customers consumed approximately 193 million kilowatt-hours in 2018 (CEC 2019a). SCE receives electric power from a variety of sources. According to the 2017 Power Content Label, 29% of SCE's power came from renewable energy sources in 2017, including biomass/waste, geothermal, hydroelectric, solar, and wind sources (CEC 2018).

##### **Natural Gas**

Southern California Gas (SoCalGas) serves the area surrounding the project site. SoCalGas serves 21.8 million customers in a 24,000-square-mile service area that includes over 500 communities (SoCalGas 2019). In 2018 (the most recent year for which data is available), SoCalGas delivered 5,156 million therms of natural gas, with the majority going to residential uses (CEC 2019b). Demand for natural gas can vary depending on factors such as weather, price of electricity, the health of the economy, environmental regulations, energy-efficiency programs, and the availability of alternative renewable energy sources. Natural gas is available from a variety of in-state and out-of-state sources and is provided throughout the state in response to market supply and demand.

##### **Petroleum**

Transportation accounts for the majority of California's total energy consumption (CEC 2018). There are more than 35 million registered vehicles in California, and those vehicles consume an estimated 17 billion gallons of fuel each year (DMV 2019). However, technological advances, market trends, consumer behavior, and government policies

could result in significant changes in fuel consumption by type and in total. At the federal and state levels, various policies, rules, and regulations have been enacted to improve vehicle fuel efficiency, promote the development and use of alternative fuels, reduce transportation-source air pollutants and GHG emissions, and reduce vehicle miles traveled.

### 3.6.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VI. Energy</b> – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) ***Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?***

**Less Than Significant Impact.** The short-term construction and long-term operation of the proposed project will require the consumption of energy resources in several forms at the project site and within the project area. Construction and operational energy consumption are evaluated in detail below.

**Electricity**

***Construction Use***

Temporary electric power for as-necessary lighting and electronic equipment such as computers inside temporary construction trailers would be provided by SCE. The electricity used for such activities would be temporary and would have a negligible contribution to the project’s overall energy consumption.

***Operational Use***

Project operation would require electricity for multiple purposes including building heating and cooling, lighting, appliances, electronics, and water and wastewater conveyance. The estimation of operational building energy was based on the applicant-provided forecasted annual electricity consumption estimate of 64,704 kilowatt-hours (kWh). Supply, conveyance, treatment, and distribution of water for the project would also require the use of electricity. Similarly, wastewater generated by the project would require the use of electricity for conveyance and treatment. Water consumption estimates for both indoor (169,979 gallons per year) and outdoor (5,253.370 gallons per year) water use were provided by the project applicant, and associated electricity consumption from water use and wastewater generation were estimated using CalEEMod. Table 7, Project Operations – Electricity Demand, presents the electricity demand for the project.

**Table 7. Project Operations – Electricity Demand**

Project Facility	kWh/year
Project	64,704
Water/Wastewater	57,428
<b>Total</b>	<b>122,132</b>

Source: Appendix B

Notes: kWh = kilowatt-hour.

For comparison, electricity demand for Riverside County in 2018 was 15,981 million kWh (CEC 2018a). The proposed project would result in a minimal increase in electricity consumption. Impacts related to operational electricity use would therefore be less than significant.

## Natural Gas

### *Construction Use*

Natural gas is not anticipated to be required during construction of the proposed project. Fuels used for construction would primarily consist of diesel and gasoline, which are discussed below under the “petroleum” subsection. Any minor amounts of natural gas that may be consumed as a result of project construction would have a negligible contribution to the project’s overall energy consumption.

### *Operational Use*

Natural gas consumption during operation would be required for various purposes, including building heating and cooling and cooking. For building consumption, default natural gas generation rates in CalEEMod for the proposed project land uses and climate zone were used. Table 8, Project Operations – Natural Gas Demand, presents the natural gas demand for the proposed project

**Table 8. Project Operations – Natural Gas Demand**

Project Facility	kBtu/year
Fast Food Restaurant	153,126

Source: Appendix B

Notes: kBtu = thousand British thermal units.

As shown in Table 8, the project would consume approximately 153,126 thousand British thermal units (kBtu) per year. For comparison, in 2018 SoCalGas delivered approximately 398.5 million therms (398.5 billion kBtu) to Riverside County (CEC 2018b). The proposed project is subject to statewide mandatory energy requirements as outlined in Title 24, Part 6, of the California Code of Regulations. Title 24, Part 11, contains additional energy measures that are applicable to proposed project under the California Green Building Standards Code (CALGreen). Impacts related to operational natural gas use would be less than significant.

## Petroleum

### *Construction Use*

Heavy-duty construction equipment associated with construction activities would rely on diesel fuel, as would haul and vendor trucks involved in delivery of materials to the project site. Construction workers would travel to and from the project site throughout the duration of construction. It is assumed in this analysis that construction workers would travel to and from the site in gasoline-powered light-duty vehicles.

Heavy-duty construction equipment of various types would be used during each phase of project construction. Appendix B lists the assumed equipment usage for each phase of construction. The project's construction equipment is estimated to operate a total combined 11,920 hours.

Fuel consumption from construction equipment was estimated by converting the total carbon dioxide (CO<sub>2</sub>) emissions from each construction phase to gallons using the conversion factors for CO<sub>2</sub> to gallons of gasoline or diesel. The conversion factor for gasoline is 8.78 kilograms per metric ton CO<sub>2</sub> per gallon, and the conversion factor for diesel is 10.21 kilograms per metric ton CO<sub>2</sub> per gallon (The Climate Registry 2019). The estimated diesel fuel usage from construction equipment is shown in Table 9, Construction Equipment Diesel Demand.

**Table 9. Construction Equipment Diesel Demand**

Phase	Pieces of Equipment	Equipment CO <sub>2</sub> (MT)	Kg CO <sub>2</sub> /Gallon	Gallons
Demolition	6	51.00	10.21	4,994.90
Site Preparation	7	33.43	10.21	3,274.30
Grading	6	156.35	10.21	15,313.64
Building Construction	9	34.74	10.21	3,402.69
Paving	6	30.04	10.21	2,942.44
Architectural Coating	1	2.55	10.21	250.08
<b>Total</b>				<b>30,178.05</b>

Sources: Pieces of equipment and equipment CO<sub>2</sub> (Appendix B); kg CO<sub>2</sub>/Gallon (The Climate Registry 2019).

Notes: CO<sub>2</sub> = carbon dioxide; MT = metric ton; kg = kilogram.

Fuel estimates for total worker, vendor, and haul truck fuel consumption are provided in Table 10, Construction Worker, Vendor, and Haul Truck Petroleum Demand.

**Table 10. Construction Worker, Vendor, and Haul Truck Petroleum Demand**

Phase	Trips	Vehicle MT CO <sub>2</sub>	Kg CO <sub>2</sub> /Gallon	Gallons
<b>Worker Vehicles (Gasoline)</b>				
Demolition	480	3.18	8.78	361.70
Site Preparation	360	2.38	8.78	271.28

Grading	0	0.00	10.21	0.00
Building Construction	1,680	22.99	10.21	2,251.34
Paving	0	0.00	10.21	0.00
Architectural Coating	0	0.00	10.21	0.00

**Table 10. Construction Worker, Vendor, and Haul Truck Petroleum Demand**

Phase	Trips	Vehicle MT CO <sub>2</sub>	Kg CO <sub>2</sub> /Gallon	Gallons
<b>Total</b>				<b>2,251.34</b>
<b><i>Haul Trucks (Diesel)</i></b>				
Demolition	18	0.68	10.21	66.52
Site Preparation	0	0.00	10.21	0.00
Grading	626	23.62	10.21	2,313.44
Building Construction	0	0.00	10.21	0.00
Paving	0	0.00	10.21	0.00
Architectural Coating	0	0.00	10.21	0.00
<b>Total</b>				<b>2,379.96</b>

Sources: Trips and vehicle CO<sub>2</sub> (Appendix B); kg CO<sub>2</sub>/Gallon (The Climate Registry 2019).

Notes: MT = metric ton; CO<sub>2</sub> = carbon dioxide; kg = kilogram.

In summary, construction of the project is conservatively anticipated to consume 6,149 gallons of gasoline and 34,809 gallons of diesel over a period of approximately 12 months. For comparison, approximately 20 billion gallons of petroleum will likely be consumed in California over the course of the proposed project's construction phase, based on the California daily petroleum consumption estimate of approximately 78.6 million gallons per day (EIA 2017). Overall, because petroleum use during construction would be temporary, and would not be wasteful or inefficient, impacts would be less than significant.

### ***Operational Use***

The fuel consumption resulting from the project's operational phase would be attributable to employees and visitors traveling to and from the project site. Petroleum fuel consumption associated with motor vehicles traveling to and from the project site during operation is a function of vehicle miles traveled (VMT). As shown in Appendix B, the annual VMT attributable to the project is expected to be 1,241,798 VMT per year. Similar to construction worker and truck trips, fuel consumption for operation is estimated by converting the total CO<sub>2</sub> emissions from VMT to gallons using the conversion factors for CO<sub>2</sub> to gallons of gasoline or diesel. Based on the default CalEEMod vehicle mix and the countywide proportion of gasoline and diesel on-road vehicle VMT, the vehicles associated with project operations would likely be approximately 93% gasoline powered and 7% diesel powered vehicles. The estimated fuel use from vehicles traveling to and from the project site during operation is shown in Table 11, Project Operations – Petroleum Consumption.

**Table 11. Project Operations – Petroleum Consumption**

Fuel	Vehicle MT CO <sub>2</sub>	kg CO <sub>2</sub> /Gallon	Gallons
Gasoline	494.40	8.78	53,309.64
Diesel	40.19	10.21	3,936.77

Source: Appendix B and Appendix G

Notes: CO<sub>2</sub> = carbon dioxide; kg = kilogram; MT = metric ton

As depicted in Table 11, project operation would result in approximately 60,246 gallons of petroleum fuel usage per year. This is a conservative estimate, since it does not account for usage of electric vehicles (EVs). By comparison, California as a whole consumes approximately 28.7 billion gallons of petroleum per year (EIA 2017).

Over the lifetime of the project, the fuel efficiency of vehicles is expected to increase. As such, the amount of petroleum consumed as a result of vehicular trips to and from the project site during operation is expected to decrease over time. There are numerous regulations in place that require and encourage increased fuel efficiency, such as efforts to accelerate the number of plug-in hybrids and zero-emissions vehicles in California and increasingly stringent emissions standards (CARB 2013). As such, operation of the project is expected to use decreasing amounts of petroleum over time due to advances in fuel economy. Impacts related to operational petroleum use would therefore be less than significant.

In summary, although the project would increase energy use, the use would be a small fraction of the statewide use and, due to efficiency increases, is expected to diminish over time (particularly with respect to petroleum). Given these considerations, energy consumption associated with the project would not be considered inefficient or wasteful and would result in a less than significant impact. No mitigation is required.

**b) *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?***

**Less Than Significant Impact.** The proposed project would be subject to state regulations for energy efficiency, namely, California's Building Energy Efficiency Standards and CALGreen, both of which are set forth in the California Code of Regulations, Title 24. California's Building Energy Efficiency Standards were established in 1978 and serve to enhance and regulate California's building standards. These standards include regulations for residential and nonresidential buildings constructed in California to reduce energy demand and consumption. The Building Energy Efficiency Standards are updated periodically (every 3 years) to incorporate and consider new energy efficiency technologies and methodologies. CALGreen institutes mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential, and state-owned buildings, as well as schools and hospitals. The 2016 CALGreen standards became effective on January 1, 2017. The new 2019 standard become effective on January 1, 2020. The proposed project would meet Building Energy Efficiency Standards and CALGreen standards to reduce energy demand and increase energy efficiency.

At a regional level, the proposed project would be subject to the policies set forth in SCAG's 2016 RTP/SCS. The RTP/SCS is a regional growth-management strategy that targets per-capita GHG reduction from passenger vehicles and light-duty trucks in the Southern California region pursuant to Senate Bill (SB) 375. In addition to demonstrating the region's ability to attain and exceed the GHG emission-reduction targets set forth by CARB, the 2016 RTP/SCS outlines a series of actions and strategies for integrating the transportation network with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. Thus, successful implementation of the 2016 RTP/SCS would result in more complete communities with a variety of transportation and housing choices, while reducing automobile use. With regard to individual developments, such as the project, the strategies and policies set forth in the 2016 RTP/SCS include improved energy efficiency. The 2016 RTP/SCS goal is to actively encourage and create incentives for energy efficiency, where possible. As discussed previously, the project would comply with the 2019 CALGreen standards. For these reasons, the proposed project would be consistent with the SCAG 2016 RTP/SCS.

The proposed project would follow applicable energy standards and regulations during construction. In addition, the proposed project would be built and operated in accordance with all existing, applicable regulations at the time of construction. As such, the proposed project would not conflict with existing energy standards and regulations; therefore, impacts during construction and operation of the proposed project would be less than significant.

### 3.6.3 Mitigation Measures

No mitigation measures are required.

## 3.7 Geology and Soils

### 3.7.1 Environmental Setting

The project site is located in the northwestern portion of the Coachella Valley, a part of the Colorado Desert geomorphic province. Elevation at the project site ranges from 1,012 to 1031 feet above mean sea level (amsl). Surface drainage occurs via sheet flow from northwest to southeast.

#### Soils

One soil type is mapped in the study area: Carsitas fine sand, 0% to 5% slopes (USDA 2019). The Carsitas series consists of very deep, somewhat excessively drained soils that are formed in alluvium from granitoid and/or gneissic rocks. These soils are typically found on alluvial fans, valleys, and drainage ways (USDA 2019). This soil series make up the entirety of the study area, including the project site.

#### Seismicity

The project site is not located within a State of California Earthquake Fault Zone (DOC 1980). Hence, there are no active faults currently mapped within the project site. However, the Mission Creek segment of the San Andreas fault system is located approximately 0.64 miles northeast of the project site and the banning branch of the San Andreas fault system is located approximately 3 miles southwest of the project site (DOC 1980).

#### Paleontological Sensitivity

The project site is recognized as having low sensitivity for presence of paleontological resources, based on the geologic formations present in the area (Riverside County 2015). Areas recognized for having “Low” potential have a reduced likelihood of containing significant nonrenewable paleontological resources, including vertebrate or significant invertebrate fossils.

### 3.7.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VII. GEOLOGY AND SOILS</b> – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

- i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

**No Impact.** The location of surface rupture generally can be assumed to be along an active or potentially active major fault trace. The damage from surface fault rupture is generally limited to a linear zone that is a few yards wide. No active or potentially active faults have been mapped on the project site (Riverside County 2019). The nearest fault is the Mission Creek segment of the San Andreas fault system, located approximately 0.64 miles northeast of the project site (DOC 1980). Therefore, the probability of damage from surface ground rupture is considered to be low.

In addition, the proposed project would include construction of a City park with sports fields. It would not include construction, nor would it indirectly foster the construction of, structures for human habitation..

**ii) Strong seismic ground shaking?**

**Less Than Significant Impact.** Although no known active faults bisect the project site, the project site is located in a seismically active area of Southern California and is expected to experience moderate to severe ground shaking during the lifetime of the proposed project (City of Desert Hot Springs 2000). In general, peak ground accelerations and seismic intensity values decrease with increasing distance from the causative fault. However, local site conditions, such as the top of ridges, may amplify the seismic waves generated by an earthquake, resulting in higher accelerations.

Although the project site is expected to experience moderate to severe ground shaking, the proposed project would include construction of a City park with sports fields, which would not directly or indirectly foster construction of structures for human habitation.

In addition, the proposed project would be constructed in a manner that reduces the risk of seismic hazards (Title 24, California Code of Regulations). The proposed project would be conditioned to comply with the most current seismic design coefficients, ground motion parameters, and all applicable provisions of the California Building Code (CBC).

**iii) Seismic-related ground failure, including liquefaction?**

**Less Than Significant Impact.** The project site is recognized as having moderate susceptibility to liquefaction (Riverside County 2019). Factors known to influence liquefaction include soil type, structure, grain size, relative density, confining pressure, depth to groundwater (typically occurs in the upper 50 feet), and the intensity and duration of ground shaking. Soils most susceptible to liquefaction are saturated, loose sandy soils and low plasticity clay and silt. The Mission Springs Water District (MSWD) 2015 Urban Water Management Plan estimated that groundwater levels within the Mission Creek Subbasin, in which the project site is located, average 300 feet below ground surface. In addition, the project site is not near any major water features that would result in increased moisture levels in surface soils on site.

Although the project site is located within a geologic unit with potential to become unstable during a seismic event, the proposed project would be required to adhere to all applicable local and regional design standards to meet state seismic design parameters as identified in the California Building Code.

**iv) Landslides?**

**No Impact.** The project site is on generally flat land, approximately 2 miles away from the base of the Little San Bernardino Mountains. The proposed project is not located within a landslide zone (DOC 2019). Based on the relatively flat topography and lack of any significant slopes in the vicinity of the project site, there is no potential for landslides.

**b) Would the project result in substantial soil erosion or the loss of topsoil?**

**Less Than Significant Impact.** In its existing condition, approximately 3.2 acres of the project site is utilized for the City's Corporate Yard, and about two acres of that area is paved. The remaining 6.8 acres of the project site is currently vacant, characterized by disturbed sandy soils with minimal vegetation. During construction of the project, soils would be disrupted during grading activities, exposure of uncovered soils,

thereby increasing the potential for wind or water-related erosion and sedimentation until the construction is completed.

During proposed construction, contractors would be required to comply with federal, state, and local requirements and guidelines to minimize the potential for soil erosion, including the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities, 2009-0009-DWQ, as amended by 2010-0014-DWQ (General Construction Permit) and each jurisdiction's stormwater permit. A Stormwater Pollution Prevention Plan (SWPPP) would be prepared, outlining BMPs to minimize stormwater pollution resulting from erosion and sediment migration from the construction areas. In addition, the proposed project must comply with SCAQMD Rule 403, through application of standard best management practices (BMPs), to minimize fugitive dust from the project site. Compliance with applicable federal, State and local regulations would ensure soil erosion, primarily during ground-disturbing construction activities, does not result in substantial loss of top soil.

- c) ***Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?***

**Less Than Significant Impact.** As discussed in Section 3.7.2(a), based on topography and lack of significant slopes in the vicinity of the project site, there is low potential for liquefaction and no potential for landslides at the site. If seismically-induced liquefaction did occur, it could cause sand boiling, ground subsidence and failure, differential settlement, and lateral spreading of the ground. As discussed in Section 3.7.2 (a.iii), the proposed project would be designed and constructed to meet state seismic design parameters as identified in the California Building Code.

- d) ***Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?***

**Less Than Significant Impact.** The soil underlain the project site is comprised of sandy soil. These well-drained sandy soils have low water storage ability and low capacity to transmit water (NRCS 2019). Therefore, soil expansion is unlikely. In addition, the proposed project would be designed and constructed consistent with all applicable local and regional design standards which are required to adhere to state seismic design parameters identified in the California Building Code.

- e) ***Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?***

**No Impact.** The use of septic tanks or other alternative wastewater disposal systems would not be a part of the proposed project.

- f) ***Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?***

**Less Than Significant Impact with Mitigation Incorporated.** The project site and vicinity is within an area of low sensitivity for paleontological resources (Riverside County, 2015). This sensitivity classification is based on mapped geologic units in the area. The younger alluvial deposits present throughout the project site have low potential for paleontological sensitivity at the surface and shallow depths; however, despite the low probability of encountering archaeological deposits, it is always possible that such deposits exist

subsurface. Therefore, **MM GEO-1** is recommended to reduce potential impacts to unanticipated paleontological resources during ground-disturbing activities.

### 3.7.3 Mitigation Measures

**MM GEO-1** Should construction/development activities uncover paleontological resources, work will be halted in that area and moved to other parts of the project site and a qualified paleontologist shall determine the significance of these resources. The paleontologist shall have authority to divert grading away from exposed fossils temporarily in order to recover the fossil specimens. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented as recommended by the monitor.

## 3.8 Greenhouse Gas Emissions

### 3.8.1 Environmental Setting

Climate change refers to any significant change in measures of climate—such as temperature, precipitation, or wind patterns—lasting for an extended period of time (decades or longer). The Earth’s temperature depends on the balance between energy entering and leaving the planet’s system, and many factors (natural and human) can cause changes in Earth’s energy balance. The greenhouse effect is the trapping and build-up of heat in the atmosphere (troposphere) near the Earth’s surface. The greenhouse effect is a natural process that contributes to regulating the Earth’s temperature, and it creates a livable environment on Earth. Human activities that emit additional Greenhouse Gas (GHG) emissions to the atmosphere that increase the amount of infrared radiation that gets absorbed before escaping into space, thus enhancing the greenhouse effect and causing the Earth’s surface temperature to rise. Global climate change is a cumulative impact; a project contributes to this impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. Thus, GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008).

A GHG is any gas that absorbs infrared radiation in the atmosphere; in other words, GHGs trap heat in the atmosphere. As defined in California Health and Safety Code Section 38505(g) for purposes of administering many of the state’s primary GHG emissions reduction programs, GHGs include carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride (see also 14 CCR 15364.5). The three GHGs evaluated for GHG emission impacts are CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O. Hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride were not evaluated or estimated in this analysis because the proposed project would not generate them in measurable quantities.

Gases in the atmosphere can contribute to climate change both directly and indirectly.<sup>2</sup> The Intergovernmental Panel on Climate Change developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The reference gas used is CO<sub>2</sub>; therefore, GWP-weighted emissions are measured in metric tons (MT) of CO<sub>2</sub> equivalent (CO<sub>2</sub>e). Consistent with CalEEMod Version 2016.3.2, this GHG emissions analysis assumed the GWP for CH<sub>4</sub> is 25 (emissions of 1 MT of CH<sub>4</sub> are equivalent to emissions

---

<sup>2</sup> Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other GHGs, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the Earth (e.g., affect cloud formation or albedo) (EPA 2017).

of 25 MT of CO<sub>2</sub>), and the GWP for N<sub>2</sub>O is 298, based on the Intergovernmental Panel on Climate Change Fourth Assessment Report (IPCC 2007).

### 3.8.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VIII. GREENHOUSE GAS EMISSIONS</b> – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) **Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

**Short-Term Construction Emissions**

**Less Than Significant Impact.** Construction of the project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor and haul trucks, and worker vehicles. As previously stated, SCAQMD recommends that construction emissions be amortized over a 30-year project lifetime; therefore, the total construction GHG emissions were calculated, amortized over 30 years, and then compared to the SCAQMD operational GHG significance threshold of 1,400 MT CO<sub>2</sub>e per year.

The CalEEMod was used to estimate GHG emissions during construction. Construction of the project is anticipated to last up to 12 months. On-site sources of GHG emissions include off-road equipment and off-site sources include on-road vehicles (haul trucks, vendor trucks, and worker vehicles). Table 12 presents construction GHG emissions for the project from on-site and off-site emission sources.

**Table 12. Estimated Annual Construction Greenhouse Gas Emissions**

Year	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	CO <sub>2</sub> e
	Metric Tons			
2020	409.39	0.10	0.00	411.86
<b>Annualized emissions over 30 years (metric tons per year)</b>				<b>13.73</b>

Source: Appendix B  
 Notes: CO<sub>2</sub> = carbon dioxide; CH<sub>4</sub> = methane; N<sub>2</sub>O = nitrous oxide; CO<sub>2</sub>e = carbon dioxide equivalent.

As shown in Table 12, the estimated total GHG emissions during construction would be approximately 412 MT CO<sub>2</sub>e. Estimated project-generated construction emissions amortized over 30 years would be approximately 14 MT CO<sub>2</sub>e per year. As with project-generated construction air quality pollutant emissions, GHG emissions generated during construction of the project would be short-term in nature, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions.

Because there is no separate GHG threshold for construction, the evaluation of significance is determined by adding the amortized construction emissions to the operational emissions and comparing them to the operational threshold.

### **Long-Term Operational Emissions**

**Less Than Significant Impact.** CalEEMod was used to estimate potential project-generated operational GHG emissions from area sources (landscape maintenance), energy sources (natural gas and electricity), mobile sources, solid waste, and water supply and wastewater treatment. Emissions from each category are discussed in the following text with respect to the project. Operational year 2021 was assumed as the first full year of operation.

#### ***Area Sources***

CalEEMod was used to estimate GHG emissions from the project's area sources, which include operation of gasoline-powered landscape maintenance equipment, which produce minimal GHG emissions. See Section 3.3.2(b) for a discussion of landscaping equipment emissions calculations. Consumer product use and architectural coatings result in VOC emissions, which are analyzed in the air quality analysis only, and little to no GHG emissions.

#### ***Energy Sources***

The estimation of operational energy emissions was based on CalEEMod land use defaults and units or total area (i.e., square footage) of the project's land uses. For nonresidential buildings, CalEEMod energy intensity value (electricity or natural gas usage per square foot per year) assumptions were based on the California Commercial End-Use Survey database. Emissions are calculated by multiplying the energy use by the utility carbon intensity (pounds of GHGs per kilowatt-hour for electricity or 1,000 British thermal units for natural gas) for CO<sub>2</sub> and other GHGs. Annual natural gas (non-hearth) and electricity emissions were estimated in CalEEMod using the emissions factors for SCE, which would be the energy source provider for the project. The project has no natural gas connection to the site and will not use natural gas. CalEEMod default assumptions were used for electricity use. The CalEEMod default natural gas use was converted to electricity to account for the additional electricity load.

#### ***Mobile Sources***

All details for criteria air pollutants discussed in Section 3.3.2(b) are also applicable for the estimation of operational mobile source GHG emissions. Regulatory measures related to mobile sources include AB 1493 (Pavley) and related federal standards. AB 1493 required that CARB establish GHG emission standards for automobiles, light-duty trucks, and other vehicles determined by CARB to be vehicles that are primarily used for noncommercial personal transportation in the state. In addition, the National Highway Traffic Safety Administration and U.S. Environmental Protection Agency have established corporate fuel economy standards and GHG emission standards, respectively, for automobiles and light-, medium-, and heavy-duty vehicles. Implementation of these standards and fleet turnover (replacement of older vehicles with newer ones) will gradually reduce emissions from the project's motor vehicles. The effectiveness of fuel economy improvements was evaluated by using the CalEEMod emission factors for motor vehicles in 2021 to the extent it was captured in EMFAC 2014.

The Low Carbon Fuel Standard calls for a 10% reduction in the carbon intensity of motor vehicle fuels by 2020, which would further reduce GHG emissions. However, the carbon intensity reduction associated with

the Low Carbon Fuel Standard was not assumed in EMFAC 2014 and thus was not included in CalEEMod Version 2016.3.2 or the following calculations.

### ***Solid Waste***

The project would generate solid waste and therefore would result in CO<sub>2</sub>e emissions associated with landfill off gassing. CalEEMod default values for solid waste generation were used to estimate GHG emissions associated with solid waste. Per AB 341 (requiring mandatory commercial recycling beginning July 1, 2012), a 50% diversion rate has been included in the GHG assessment.

### ***Water and Wastewater***

Supply, conveyance, treatment, and distribution of water for the project require the use of electricity, which would result in associated indirect GHG emissions. Similarly, wastewater generated by the project requires the use of electricity for conveyance and treatment, along with GHG emissions generated during wastewater treatment. Water consumption estimates for both indoor and outdoor water use and associated electricity consumption from water use and wastewater generation were estimated using CalEEMod default values. Table 13 presents the GHG emissions of the project during operation.

**Table 13. Estimated Annual Operation Greenhouse Gas Emissions**

Emissions Source	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	CO <sub>2</sub> e
	<i>Metric Tons per Year</i>			
Area	0.00	0.00	0.00	0.00
Energy	28.79	0.00	0.00	28.91
Mobile	534.59	0.03	0.00	535.25
Waste	0.69	0.04	0.00	1.72
Water	19.36	0.01	0.00	19.60
Amortized construction emissions	—	—	—	13.73
<b>Total</b>				<b>599.21</b>
<i>SCAQMD Threshold</i>				<i>1,400.00</i>
<b>Threshold Exceeded?</b>				<b>No</b>

Source: Appendix B

Notes: CO<sub>2</sub> = carbon dioxide; CH<sub>4</sub> = methane; N<sub>2</sub>O = nitrous oxide; CO<sub>2</sub>e = carbon dioxide equivalent; SCAQMD = South Coast Air Quality Management District.

As shown in Table 13, the estimated total GHG emissions during operation of the project would be approximately 599 MT CO<sub>2</sub>e, including amortized construction emissions. The project would not exceed the SCAQMD threshold of 1,400 MT CO<sub>2</sub>e per year. Projects below this significance criterion have a minimal contribution to global emissions and are considered to have less than significant impacts. Therefore, operational impacts associated with directly or indirectly generating a significant quantity of GHG emissions would be less than significant.

b) **Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

**Less Than Significant Impact.** The following information supports this impact conclusion.

**Consistency with the City of Desert Hot Springs’s Climate Action Plan**

The City’s Climate Action Plan (CAP) is not a qualified GHG reduction plan according to CEQA Guidelines, Section 15183.5, and, thus, cannot be used in a cumulative impacts analysis to determine significance. Therefore, this discussion of consistency is for informational purposes only. Table 14 provides an overview of the measures and goals within the CAP that are applicable to the project and the project’s consistency with them. As shown in Table 14, the project does not conflict with any of the GHG reducing measures or goals within the CAP and, thus, is consistent with the plan. It should also be noted that the proposed project would not inhibit the City from implementing any of the measures not listed in Table 14 because they do not apply to the project.

**Table 14. Project Consistency with the Climate Action Plan GHG Emission Reduction Strategies**

Sphere	Climate Action Plan Measure	Project Consistency
Where we live – 14	<b>Solid Waste Diversion:</b> Increase solid waste diversion rate by an additional 10% to 78.1% by 2020 potentially through awareness programs, recognition, tiered rate structures, and other financial instruments.	<b>Consistent.</b> The Project would divert its solid waste in accordance with state and local regulations.
How we build – 4	<b>Green Building Program:</b> Promote the voluntary Green Building Program to prepare for enhanced Title 24 requirements and green building standards.	<b>Consistent.</b> The Project would be constructed in accordance with the building code adopted at the time of construction.
How we build – 5	<b>Green Building Support Services:</b> Advance the Voluntary Green Building Program to mandatory green building requirement with technical support services.	<b>Consistent.</b> The Project would be constructed in accordance with the building code adopted at the time of construction.
How we get around – 14	<b>Anti-Idling:</b> Pass ordinance that restricts idling of greater than 5 minutes for all commercial vehicles in specific zones. In accordance with CARB rules regarding idling of commercial Vehicles.	<b>Consistent.</b> The Project’s vehicles will limit idling during construction to no longer than 5 minutes.
RECREATE-4	<b>Ball Field Lighting Timers:</b> Promote the installation of timers for all ballfield or recreational lighting at schools and city facilities.	<b>Consistent.</b> The project will include lighting timers for the parks in order to reduce unnecessary use of energy.
RECREATE-8	<b>Irrigation System Controls:</b> Promote the installation of irrigation control sensors at parks, recreational facilities and golf courses.	<b>Consistent.</b> The project will include the use of an irrigation control system to manager watering of the park.

Source: City of Desert Hot Springs 2013a.

**Consistency with the SCAG’s 2016–2040 Regional Transportation Plan and the 2016 SCAQMD AQMP**

SCAG’s 2016 RTP/SCS is a regional growth-management strategy that targets per-capita GHG reduction from passenger vehicles and light-duty trucks in the Southern California region. The 2016 RTP/SCS incorporates local land use projections and circulation networks in city and county general plans. Typically, a project would be consistent with the RTP/SCS if the project does not exceed the underlying growth assumptions within the RTP/SCS. Because the project is not growth inducing, this type of consistency

analysis does not apply. The project would not conflict with most of the goals within SCAG’s 2016 RTP/SCS. The project would conflict with the goal to improve air quality and GHG in the region. However, as shown in Sections 3.3(b) and 3.7(a), the project would not exceed any SCAQMD thresholds and would not result in a substantial amount of air pollutant or GHG emissions.

While striving to achieve the NAAQS for O<sub>3</sub> and PM<sub>2.5</sub> and the CAAQS for O<sub>3</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> through a variety of air quality control measures, the SCAQMD 2016 AQMP also accommodates planned growth in the SSAB. Projects are considered consistent with, and would not conflict with or obstruct implementation of, the AQMP if the growth in socioeconomic factors (e.g., population, employment) is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook). As discussed in Section 3.3(a), the demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by SCAG for their 2016–2040 RTP/SCS, which are based on general plans for cities and counties in the SSAB, were used to estimate future emissions in the 2016 AQMP (SCAQMD 2017). Accordingly, the 2016 AQMP is generally consistent with local government plans. The project does not have growth-inducing components and thus would not conflict with the growth projections within the 2016 AQMP. Therefore, the project would be consistent with the goals of the 2016 AQMP.

**Consistency with CARB’s Scoping Plan**

The Scoping Plan (approved by CARB in 2008 and updated in 2014 and 2017) provides a framework for actions to reduce California’s GHG emissions and requires CARB and other state agencies to adopt regulations and other initiatives to reduce GHGs. The Scoping Plan is not directly applicable to specific projects; nor is it intended to be used for project-level evaluations.<sup>3</sup> Under the Scoping Plan, however, there are several state regulatory measures aimed at the identification and reduction of GHG emissions. CARB and other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area source emissions (e.g., energy usage, high-global warming potential (GHGs in consumer products) and changes to the vehicle fleet (i.e., hybrid, electric, and more fuel-efficient vehicles) and associated fuels (e.g., Low Carbon Fuel Standard), among others.

The Scoping Plan recommends strategies for implementation at the statewide level to meet the goals of AB 32 and establishes an overall framework for the measures that will be adopted to reduce California’s GHG emissions. Table 13 highlights measures that have been, or will be, developed under the Scoping Plan and presents the project’s consistency with Scoping Plan measures. The project would comply with all regulations adopted in furtherance of the Scoping Plan to the extent required by law and to the extent that they are applicable to the project.

**Table 15. Proposed Project Consistency with Scoping Plan GHG Emission Reduction Strategies**

Scoping Plan Measure	Measure Number	Proposed Project Consistency
<i>Transportation Sector</i>		
Advanced Clean Cars	T-1	<i>Consistent.</i> The project’s employees and visitors would operate vehicles in compliance with CARB vehicle standards that are in effect at the time of vehicle purchase.

<sup>3</sup> The Final Statement of Reasons for the amendments to the CEQA Guidelines reiterates the statement in the Initial Statement of Reasons that “[t]he Scoping Plan may not be appropriate for use in determining the significance of individual projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan” (CNRA 2009).

**Table 15. Proposed Project Consistency with Scoping Plan GHG Emission Reduction Strategies**

Scoping Plan Measure	Measure Number	Proposed Project Consistency
Low Carbon Fuel Standard	T-2	<i>Consistent.</i> Motor vehicles driven by the project's employees and visitors would use compliant fuels.
Regional Transportation-Related GHG Targets	T-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Advanced Clean Transit	—	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Last-Mile Delivery	—	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Reduction in VMT	—	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Vehicle Efficiency Measures <ol style="list-style-type: none"> <li>1. Tire Pressure</li> <li>2. Fuel Efficiency Tire Program</li> <li>3. Low-Friction Oil</li> <li>4. Vessel Speed Reduction</li> </ol>	T-6	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Heavy-Duty Vehicle GHG Emission Reduction <ul style="list-style-type: none"> <li>• Tractor-Trailer GHG Regulation</li> <li>• Heavy-Duty Greenhouse Gas Standards for New Vehicle and Engines (Phase I)</li> </ul>	T-7	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Medium- and Heavy-Duty Vehicle Hybridization Voucher Incentive Proposed Project	T-8	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Medium and Heavy-Duty GHG Phase 2	—	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
High-Speed Rail	T-9	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b><i>Electricity and Natural Gas Sector</i></b>		
Energy Efficiency Measures (Electricity)	E-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.

**Table 15. Proposed Project Consistency with Scoping Plan GHG Emission Reduction Strategies**

Scoping Plan Measure	Measure Number	Proposed Project Consistency
Energy Efficiency (Natural Gas)	CR-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Solar Water Heating (California Solar Initiative Thermal Program)	CR-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Combined Heat and Power	E-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Renewables Portfolio Standard (33% by 2020)	E-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Renewables Portfolio Standard (50% by 2050)	–	<i>Not applicable.</i> The project t would not prevent CARB from implementing this measure.
SB 1 Million Solar Roofs (California Solar Initiative, New Solar Home Partnership, Public Utility Programs) and Earlier Solar Programs	E-4	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Water Sector</b>		
Water Use Efficiency	W-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Water Recycling	W-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Water System Energy Efficiency	W-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Reuse Urban Runoff	W-4	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Renewable Energy Production	W-5	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Green Buildings</b>		
1. State Green Building Initiative: Leading the Way with State Buildings (Greening New and Existing State Buildings)	GB-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
2. Green Building Standards Code (Greening New Public Schools, Residential and Commercial Buildings)	GB-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
3. Beyond Code: Voluntary Programs at the Local Level (Greening New Public Schools, Residential and Commercial Buildings)	GB-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
4. Greening Existing Buildings (Greening Existing Homes and Commercial Buildings)	GB-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Industry Sector</b>		
Energy Efficiency and Co-Benefits Audits for Large Industrial Sources	I-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Oil and Gas Extraction GHG Emission Reduction	I-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.

**Table 15. Proposed Project Consistency with Scoping Plan GHG Emission Reduction Strategies**

Scoping Plan Measure	Measure Number	Proposed Project Consistency
Reduce GHG Emissions by 20% in Oil Refinery Sector	—	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
GHG Emissions Reduction from Natural Gas Transmission and Distribution	I-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Refinery Flare Recovery Process Improvements	I-4	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Work with the Local Air Districts to Evaluate Amendments to Their Existing Leak Detection and Repair Rules for Industrial Facilities to Include Methane Leaks	I-5	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Recycling and Waste Management Sector</b>		
Landfill Methane Control Measure	RW-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Increasing the Efficiency of Landfill Methane Capture	RW-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Mandatory Commercial Recycling	RW-3	<i>Consistent.</i> To the maximum extent practicable, the project would include recycling during both construction and operation, as required by local and state regulations.
Increase Production and Markets for Compost and Other Organics	RW-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Anaerobic/Aerobic Digestion	RW-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Extended Producer Responsibility	RW-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Environmentally Preferable Purchasing	RW-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Forests Sector</b>		
Sustainable Forest Target	F-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>High GWP Gases Sector</b>		
Motor Vehicle Air Conditioning Systems: Reduction of Refrigerant Emissions from Non-Professional Servicing	H-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
SF <sub>6</sub> Limits in Non-Utility and Non-Semiconductor Applications	H-2	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Reduction of Perfluorocarbons in Semiconductor Manufacturing	H-3	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Limit High GWP Use in Consumer Products	H-4	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Air Conditioning Refrigerant Leak Test During Vehicle Smog Check	H-5	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
Stationary Equipment Refrigerant Management Program – Refrigerant Tracking/Reporting/Repair Program	H-6	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.

**Table 15. Proposed Project Consistency with Scoping Plan GHG Emission Reduction Strategies**

Scoping Plan Measure	Measure Number	Proposed Project Consistency
Stationary Equipment Refrigerant Management Program – Specifications for Commercial and Industrial Refrigeration	H-6	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
SF <sub>6</sub> Leak Reduction Gas Insulated Switchgear	H-6	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
40% Reduction in Methane and Hydrofluorocarbon Emissions	–	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
50% Reduction in Black Carbon Emissions	–	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.
<b>Agriculture Sector</b>		
Methane Capture at Large Dairies	A-1	<i>Not applicable.</i> The project would not prevent CARB from implementing this measure.

Source: CARB 2008, 2017.

Notes: CARB = California Air Resources Board; GHG = greenhouse gas; VMT = vehicle miles traveled; N/A = not applicable; SB = Senate Bill; SF<sub>6</sub> = sulfur hexafluoride; GWP = global warming potential.

Based on the analysis in Table 15, the proposed project would be consistent with the applicable strategies and measures in the Scoping Plan.

The project would not impede the attainment of the GHG reduction goals for 2030 or 2050 identified in Executive Order (EO) S-03-05 and SB 32. EO S-03-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes for a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. While there are no established protocols or thresholds of significance for that future year analysis, CARB forecasts that compliance with the current Scoping Plan puts the state on a trajectory toward meeting these long-term GHG goals, although the specific path to compliance is unknown (CARB 2014).

To begin, CARB has expressed optimism with regard to both the 2030 and 2050 goals. It states in the First Update to the Climate Change Scoping Plan that “California is on track to meet the near-term 2020 GHG emissions limit and is well positioned to maintain and continue reductions beyond 2020 as required by AB 32” (CARB 2014). With regard to the 2050 target for reducing GHG emissions to 80% below 1990 levels, the First Update to the Climate Change Scoping Plan states the following (CARB 2014):

This level of reduction is achievable in California. In fact, if California realizes the expected benefits of existing policy goals (such as 12,000 megawatts of renewable distributed generation by 2020, net zero energy homes after 2020, existing building retrofits under AB 758, and others) it could reduce emissions by 2030 to levels squarely in line with those needed in the developed world and to stay on track to reduce emissions to 80% below 1990 levels by 2050. Additional measures, including locally driven measures and those necessary to meet federal air quality standards in 2032, could lead to even greater emission reductions.

In other words, CARB believes that the state is on a trajectory to meet the 2030 and 2050 GHG reduction targets set forth in AB 32, SB 32, and EO S-03-05. This is confirmed in the Second Update, which states (CARB 2017) the following:

The Proposed Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while also identifying new, technologically feasibility and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Proposed Plan is developed to be consistent with requirements set forth in AB 32, SB 32, and AB 197.

The project would not interfere with implementation of any of the previously described GHG reduction goals for 2030 or 2050 because the project would not exceed SCAQMD's recommended screening threshold of 1,400 MT CO<sub>2</sub>e per year (SCAQMD 2008). Because the project would not exceed the threshold, this analysis provides support for the conclusion that the project would not impede the state's trajectory toward the previously described statewide GHG reduction goals for 2030 or 2050.

As discussed previously, the project is consistent with the GHG emission reduction measures in the Scoping Plan and would not conflict with the state's trajectory toward future GHG reductions. In addition, since the specific path to compliance for the state in regard to the long-term goals will likely require development of technology or other changes that are not currently known or available, specific additional mitigation measures for the project would be speculative and cannot be identified at this time. The project's consistency would assist in meeting the City's contribution to GHG emission reduction targets in California. With respect to future GHG targets under SB 32 and EO S-03-05, CARB has also made clear its legal interpretation is that it has the requisite authority to adopt whatever regulations are necessary, beyond the AB 32 horizon year of 2020, to meet SB 32's 40% reduction target by 2030 and EO S-03-05's 80% reduction target by 2050; this legal interpretation by an expert agency provides evidence that future regulations will be adopted to continue the state on its trajectory toward meeting these future GHG targets. Based on the considerations previously outlined, the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and no mitigation is required. Therefore, impacts associated with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs would be less than significant.

### 3.8.3 Mitigation Measures

No mitigation measures are required.

## 3.9 Hazards and Hazardous Materials

### 3.9.1 Environmental Setting

The existing conditions and impact analysis for this section rely on a Phase I Environmental Site Assessment (ESA) prepared for the proposed project to assess information on past and present land uses, including identification of possible release of hazardous materials (Appendix E). The findings of the investigation are based on historical aerial

photographs, topographic maps, review of information contained in regulatory agency databases, available local agency records, interviews with site representatives, and a site reconnaissance.

**Existing Conditions**

Dudek performed a site reconnaissance on August 14, 2019 to inspect existing structures, where possible (Appendix E). Approximately 1/3 of the project site is developed as a Corporate Yard and animal shelter; the remaining 2/3 of the project site consists of vacant, undeveloped land. The Corporate Yard has been present within the project site since at least 1984. A construction staging area is located on the northeastern portion of the project site. Asphalt grindings from various operations were stored in piles within the staging area. A waste segregation area is located to the west of the construction staging area. This area is used to segregate waste collected by the City from illegal dumping activities. There are three general storage/office structures located to the east of the animal shelter. The Corporate Yard and animal shelter are accessed via asphalt drive on Hacienda Avenue.

- Two aboveground storage tanks (ASTs) are currently located on the subject property. A backup diesel generator is located on the subject property but is no longer in use. No evidence of leakage or staining was observed during the site inspection.
- Chemicals such as gasoline, diesel, motor oil, and transmission fluid were observed in containers greater than 5 gallons within the Corporate Yard. Smaller quantities of chemicals (compressor oil, gear oil, engine oil) were observed in flammable materials cabinets located in the shop area. Multiple containers of paint were observed in the paint shop in the northern portion of the Corporate Yard.
- One monitoring well was observed on the southwestern portion of the subject property. The well reportedly is owned by Mission Springs Water District. No cisterns, cesspools, or septic tanks were observed located on the project site.
- The structures within the Corporate Yard were constructed on the subject property sometime after 1972 but before 1984. Based on the structures on the subject property, building materials may contain asbestos and lead-based paint.

3.9.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:</b>				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**a) *Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?***

**Less Than Significant Impact.** Proposed project construction would involve the incidental transport and use of small quantities of common hazardous materials to operate construction equipment, such as oils, lubricants, and fuels, as well as specific materials for building construction, such as asphalt and concrete. Hazardous materials would be stored in designated areas away from environmentally sensitive areas in quantities that would not pose significant hazard to the public in the event of a release.

The California Department of Toxic Substances Control has primary regulatory authority for enforcing hazardous materials regulations. State hazardous waste regulations are contained primarily in Title 22 of the California Code of Regulations. All materials used during construction would be contained, stored, and handled in compliance with applicable standards and regulations established by the Department of Toxic Substances Control (DTSC), the United States EPA, and the Occupational Safety and Health Administration (OSHA). BMPs specific to construction waste management, as administered through the project’s SWPPP, would be required as mandatory procedures to be implemented during construction activities. Any potential impacts associated with the routine transport, use, or disposal of hazardous materials, although minimal, would be further minimized with adherence to applicable regulations.

Project operation would involve the use of common hazardous maintenance and landscape materials typically associated with park uses (i.e., fertilizers, pesticides, and herbicides, cleaning solutions, etc.) that could be potentially hazardous if handled improperly or ingested. However, these products are not considered acutely hazardous and are not generally considered unsafe. All storage, handling, and disposal of hazardous materials during project construction and operation would comply with applicable standards

and regulations. In addition, the proposed park use would not generate significant amounts of any hazardous materials

For the reasons stated above, impacts associated with the disposal of hazardous materials and/or the potential release of hazardous materials that could occur with the implementation of the proposed project are considered less than significant.

- b) ***Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?***

**Less Than Significant Impact.** The proposed project would include the construction and operation of a park use. As previously discussed in Response 4.9.2(a), construction of the proposed project would involve the use of potentially hazardous materials, including but not limited to, solvents, paints, fuels, oils, and transmission fluids. Project operation is anticipated to involve limited use of hazardous materials typical of park uses, such as pesticides and other landscaping materials. All storage, handling, and disposal of hazardous materials during project construction and operation would comply with applicable standards and regulations established by the DTSC, the United States EPA, and OSHA.

In addition, the Phase I ESA prepared for the project concluded that existing structures within the Corporate Yard might contain asbestos-containing materials (ACM). If any of these structures need to be demolished or relocated during construction of the proposed project, contact with potential ACM could pose a potential hazard during demolition. However, demolition activities would be required to comply with the SCAQMD Rule 1403, which requires testing, remediation procedures, and work practice requirements to limit asbestos emissions during demolition. In addition, as part of any removal of construction-generated hazardous waste from the project site, the applicant would be required to use a certified hazardous waste transportation company, which must haul hazardous waste to a permitted facility for treatment, storage, recycling, or disposal.

For the reasons stated above, risks associated with accidental release of hazardous materials would be adequately reduced to a less than significant level through compliance with applicable standards and regulations.

- c) ***Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?***

**No Impact.** The Two Bunch Palms Elementary school is located 0.6 miles south of the project site. The proposed project is not anticipated to result in the release of hazardous emissions, materials or waste. As previously discussed, the project site would function as a City park with sports fields. In addition, all construction and operation activities would comply with applicable standards and regulations established by the DTSC, the United States EPA, and OSHA.

- d) ***Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?***

**Less Than Significant Impact.** A regulatory database search was conducted to identify environmental records within and near the project site. The project site is listed in 11 different databases. Table 16 summarizes the databases that were searched, search distances from the project site, and records identified.

**Table 16. Regulatory Database Search**

Acronym	Database	Search Distance	Subject Property Listed?	Number of Surrounding Sites Listed
NPL	National Priorities List (including proposed NPL sites and NPL Liens [target property only])	1 mile	No	0

Additional Environmental Records, including local lists		Varies	Yes	3

Source: Appendix E

The Leaking Underground Storage Tank (LUST) database contains information about known releases. A release of gasoline was reported in 2000 during the removal of two underground storage tanks at the subject property. Upon the removal, soil samples were collected from beneath the underground storage tanks (USTs) and the two dispensers. All of the soil samples, with the exception of two soil samples (one beneath the diesel dispenser and one beneath the gasoline dispenser), were reported to have no detections of petroleum hydrocarbons or related compounds. The soil sample collected beneath the diesel dispenser (2 feet below ground surface) had a total petroleum hydrocarbons as diesel concentration of 31 milligrams per kilogram (mg/kg). The soil sample collected beneath the gasoline dispenser (2 feet below ground surface) had a total petroleum hydrocarbons as gasoline concentration of 860 mg/kg. In June 2000 one boring was drilled within 5 feet of the gasoline dispenser to further investigate the impacted soil. The boring was drilled to a depth of 30 feet and soil samples were taken at 5-foot intervals. Total petroleum hydrocarbons as gasoline, benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether were not detected in any of the soil samples collected. In August 2000, the regulatory agency recommended no further action at the site and the case was closed. Based on the findings of the investigation, the impacted soil beneath the dispenser is limited in extent and is not considered a threat to human health or the environment. The other database listings track information on sites that handle hazardous materials or generate hazardous waste but do not indicate an uncontrolled release of hazardous substances to the environment.

- e) ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?***

**No Impact.** The proposed project is located 7 miles north of the Palm Springs International Airport and is not located within a Riverside County Airport Land Use Commission (RCALUC) compatibility zone. Therefore, no would be no impact.

- f) ***Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?***

**Less Than Significant Impact.** The proposed project does not include any characteristics (e.g., permanent road closures or long-term blocking of road access) that would physically impair or otherwise conflict with an emergency response plan or emergency evacuation plan. During short-term construction activities, the proposed project is not anticipated to result in any substantial traffic queuing on nearby streets, and all construction equipment would be staged within or directly adjacent to the project site.

The proposed project does not include any changes to any public or private roadways that would interfere with the City’s emergency response plan or emergency evacuation plan. Further, the proposed project would not obstruct or alter any transportation routes that could be used as evacuation routes during emergency events. As such, impacts related to emergency response and evacuation plans associated with construction and operation of the proposed project would be less than significant.

**g) *Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?***

**No Impact.** Wildland fires occur in geographic areas that contain the types and conditions of vegetation, topography, weather, and structure density susceptible to risks associated with uncontrolled fires that can be started by lightning, improperly managed camp fires, cigarettes, sparks from automobiles, and other ignition sources. The project site is located in a developed area where wildfire is not considered a likely risk to people or structures. In addition, the project site and the surrounding areas do not include brush- and grass-covered areas typically found in areas susceptible to wildfires. Therefore, the proposed project would not expose people or structures to a significant risk of loss, injury, or death from wildland fires.

### 3.9.3 Mitigation Measures

No mitigation measures are required.

## 3.10 Hydrology and Water Quality

### 3.10.1 Environmental Setting

The North Coachella Valley, including the project site, lies in the northwestern end of the Salton Trough, a broad southeast-trending structural depression that includes the Coachella Valley, Salton Sea, and Imperial Valley. The Coachella Valley is filled with alluvial and lake-bed sediments that are several thousand feet thick. It is bordered on the north and east by the Little San Bernardino Mountains, on the northwest by the San Bernardino Mountains, and on the southwest by the San Jacinto and Santa Rosa Mountains.

The surrounding mountains help isolate the Coachella Valley and the City of Desert Hot Springs from Pacific maritime air masses, resulting in a subtropical desert climate with hot, dry summers and mild winters. Mean annual rainfall is very low from the desert floor into the foothills, ranging from 4 to 6 inches per year and averaging approximately 5 to 6 inches along the foothills. In some years, measurable rainfall has been reported within the City of Desert Hot Springs. Summer daytime temperatures can occasionally exceed 125 °F and winter temperatures infrequently fall below freezing.

Approximately 1/3 of the project site is developed as the City's Corporate Yard and animal shelter. The remainder of the project site consists of vacant disturbed land. The project site is located outside the 100-year floodplain, within shaded Zone X, per Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel No. 06065C0885G (August 8, 2008). The project site contains mostly low-lying desert plants and Sonoran Creosote Brush Scrub and the project site's topography is generally flat, sloping to the southeast, with elevations ranging from 1,031 feet (in the north) and 1,011 feet (in the southeast) above mean sea level (AMSL).

3.10.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>X. HYDROLOGY AND WATER QUALITY – Would the project:</b>				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on or off site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) **Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?**

**Less Than Significant Impact.** Pollutants of concern during project construction include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. During construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and transport of sediment downstream compared to existing conditions. During a storm event, soil erosion could occur at an accelerated rate. In addition, construction-related pollutants such as chemicals, liquid and petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste could be spilled, leaked,

or transported via stormwater runoff into adjacent drainages and into downstream receiving waters. Any of these pollutants has the potential to be transported via stormwater runoff.

Construction activities associated with the proposed project would disturb approximately 10 acres of soil. Projects that disturb greater than 1 acre of soil are required to comply with the State Water Resources Control Board's (SWRCB) NPDES permit Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction and Land Disturbance Activities (Order No. 2009-0009-DWQ, NPDES No. CAS000002, as amended by Orders No. 2010-0014-DWQ and 2012-0006-DWQ) (Construction General Permit). The Construction General Permit requires preparation of a SWPPP and implementation of construction BMPs during construction activities. In compliance with the Construction General Permit, a SWPPP would be prepared for the project and construction BMPs implemented to target pollutants of concern.

The proposed project includes construction of a football field, baseball field, common areas with concession and restrooms, a parking lot and on-site circulation, and location changes to the existing Corporate Yard. The Corporate Yard is anticipated to operate consistent with current conditions. Pollutants of concern during operation of the Corporate Yard Park could include suspended solids/sediment, nutrients, pesticides, trash and debris, oil and grease. The proposed project would result in an increase in impervious surface acreage of approximately 3.5 acres on the project site following project implementation. An increase in impervious surface area would expand the volume of runoff during a storm, which could increase the amount of pollutants discharged into downstream receiving waters. Visitors to the site would be a potential source of trash and debris. Landscaping included as part of the project would capture and aid with treatment of stormwater runoff from the increased impervious surface areas, but could also be a potential source of nutrients and pesticides. Any vehicles utilizing the parking area could be a source of oil, grease, and metals.

The proposed project would be designed with on-site stormwater retention infrastructure that, during the life of the project, would comply with the Stormwater Management and Discharge Controls per Chapter 13.08 of the Desert Hot Springs Municipal Code (Ordinance #1997-03). Compliance with the ordinance would minimize the discharge and transport of pollutants associated with increased impervious surfaces within the project site through the control of volume and rate stormwater runoff. In addition, during long-term operation, each project will be required to maintain the site under a post-construction Water Quality Management Plan (WQMP) that addresses potential runoff and ongoing maintenance of BMPs related to on-site drainage improvements.

Therefore, through compliance with all applicable regulations, the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.

**b) *Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?***

**Less Than Significant Impact.** Groundwater is the principal source of municipal water supply in the Coachella Valley. The project is underlain by the Mission Creek groundwater sub-basin, which along with the Garnet Hill sub-basin, occupies the northern portion of the Coachella Valley and forms part of the larger Coachella Valley Groundwater Basin. This basin is managed under the Mission Creek and Garnet Hill Subbasins Water Management Plan, operated by the Coachella Valley Water District, the Desert Water

Agency, and the Mission Springs Water District. The Urban Water Management Plan identifies long-term strategies to address current and future water demands in this area. The project site is located within the service boundary of the Mission Springs Water District.

The total water demand estimate for the proposed project is 0.018 mgd (20 AFY). The MSWD total water demand in 2020 is projected to be 9,550 acre-feet per year (AFY) (MSWD 2016). As such, the total estimated water demand for the proposed project would increase the City's total annual water demand by 0.002 percent. Therefore, the proposed project would not require a substantial increase in groundwater pumping for adequate water supply.

Furthermore, the proposed project would be designed with on-site stormwater retention infrastructure to contain a 100-year, 24-hour storm event, per Chapter 13.08 of the Desert Hot Springs Municipal Code (Ordinance #1997-03). As such, stormwater captured on-site would ensure groundwater recharge would not be reduced compared to existing conditions.

c) ***Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:***

i) ***result in substantial erosion or siltation on or off site;***

**Less Than Significant Impact.** Although there are no streams or rivers on the project site, excavated soil would be exposed and disturbed and drainage patterns would be temporarily altered during grading and other construction activities. In addition, during a storm event, soil erosion could occur at an accelerated rate. Therefore, there would be an increased potential for soil erosion and the transport of sediment downstream compared with existing conditions. As discussed in Response 4.10.2(a), the Construction General Permit requires preparation of a SWPPP and implementation of construction BMPs to reduce impacts to water quality during construction, including those impacts associated with soil erosion, and siltation. Implementation of the construction BMPs would reduce short-term impacts associated with on- or off-site erosion or siltation associated with the proposed project.

Development of the proposed project would increase impervious surface area on the project site by approximately 3.5 acres, which would increase stormwater runoff. However, impervious surface areas (such as common areas and parking/circulation) and installation of turf sports fields would reduce the potential for erosion or siltation on-site.

ii) ***substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;***

**Less Than Significant Impact.** Development of the proposed project would increase impervious surface area on the project site by approximately 3.5 acres, which would increase stormwater runoff generated during project operation. The proposed project would be designed with on-site stormwater retention infrastructure to contain a 100-year, 24-hour storm event, per Chapter 13.08 of the Desert Hot Springs Municipal Code (Ordinance #1997-03). Development on on-site stormwater retention would adequately convey and reduce runoff, such that on-site and off-site drainage facility capacity would not be exceeded during a design storm. As such, the proposed project would not substantially increase the rate or amount of surface runoff that would result in flooding on-or off-site.

*iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or*

**Less Than Significant Impact.** As discussed in Response 4.10.2(a), pollutants of concern during construction include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. Each of these pollutants on its own or in combination with other pollutants can have a detrimental effect on water quality. Drainage patterns would be temporarily altered during grading and other construction activities, and construction-related pollutants could be spilled, leaked, or transported via storm runoff into adjacent drainages and downstream receiving waters. However, the proposed project would be required to comply with the requirements set forth by the Construction General Permit and SWPPP, which would specify BMPs to be implemented to control the discharge of pollutants in stormwater runoff as a result of construction activities. As such, the proposed project would not contribute runoff water that would exceed the capacity of the existing stormwater drainage infrastructure.

*iv) impede or redirect flood flows?*

**Less Than Significant Impact.** According to the FEMA FIRM Panel No. 06065C0885G (August 8, 2008), the project site is located within the shaded Zone X (FEMA 2008). A shaded Flood Zone X designation encompasses areas with a moderate chance of flood as it includes areas with a 0.2 percent annual chance of flood (500- year), areas with a one percent annual chance of flood (100-year) with average depths of less than one foot or with drainage areas less than one square mile, and areas protected from levees from one percent annual chance of flood. Although the project site has a moderate chance of flooding, the proposed project would be designed with on-site stormwater retention infrastructure to contain a 100-year, 24-hour storm event, per Chapter 13.08 of the Desert Hot Springs Municipal Code (Ordinance #1997-03). Development on on-site stormwater retention would adequately convey and reduce runoff, such that on-site and off-site drainage facility capacity would not be exceeded during a design storm. As such, the proposed project would not considerably alter the existing drainage patterns or redirect flood flows.

**d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?**

**No Impact.** As discussed in 3.10.2(c), the proposed project is not within a 100-year flood zone. The project site is not located near a levee or dam, nor is the project located near a body of water that would pose potential seiche or tsunami impacts. As such, the proposed project would not pose risk of release of pollutants within a flood hazard, tsunami, or seiche zone.

**e) *Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?***

**Less Than Significant Impact.** The project is within the jurisdiction of the Colorado River Regional Water Quality Control Board (RWQCB). The Colorado River RWQCB adopted a Water Quality Control Plan (i.e., Basin Plan) (RWQCB 2019), which designates beneficial uses for all surface and groundwater within its jurisdiction and establishes the water quality objectives and standards necessary to protect those beneficial uses. As summarized below, the project would comply with the applicable NPDES permits and would implement construction and operational BMPs to reduce pollutants of concern in stormwater runoff.

As discussed in Response 4.10.2(a), during construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and sedimentation compared to existing conditions. In addition, chemicals, liquid products, and/or petroleum products (e.g., paints, solvents, and fuels), may be spilled or leaked and have the potential to be transported via stormwater runoff into receiving waters.

The proposed project would be required to comply with the requirements set forth by the Construction General Permit, which requires preparation of a SWPPP and implementation of construction BMPs to control stormwater runoff and discharge of pollutants.

The primary pollutants of concern during project operations are suspended solids/sediment, nutrients, pesticides, trash and debris, oil, and grease. During long-term operation, each project will be required to maintain the site under a post-construction Water Quality Management Plan (WQMP) that addresses potential runoff and ongoing maintenance of BMPs related to on-site drainage improvements. The proposed BMPs would capture and treat stormwater runoff and reduce pollutants of concern in stormwater runoff.

The proposed project would be designed with on-site stormwater retention infrastructure that, during the life of the project, would comply with the Stormwater Management and Discharge Controls per Chapter 13.08 of the Desert Hot Springs Municipal Code (Ordinance #1997-03). Compliance with the ordinance would minimize the discharge and transport of pollutants associated with increased impervious surfaces within the project site through the control of volume and rate stormwater runoff.

For the reasons described above, the proposed project would not conflict with or obstruct implementation of a water quality control plan or groundwater management plan.

### 3.10.3 Mitigation Measures

No mitigation measures are required.

## 3.11 Land Use and Planning

### 3.11.1 Environmental Setting

The project site is subject to the City of Desert Hot Springs General Plan land use and zoning designation of Residential (R-L). The R-L designation allows for low-density residential development with a maximum density of five units per gross acre. Figure 4 illustrates the land use designations for the project site and surrounding properties.

### 3.11.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XI. LAND USE AND PLANNING</b> – Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) ***Would the project physically divide an established community?***

**No Impact.** The project site is located within a developed area within the City. Existing single-family residential development is located directly north, west and south of the project site. Existing multi-family residential development is located directly east of the northern portion of the project site and a church is located east of the southern portion of the site. Approximately 1/3 of the project site has been utilized as the City's Corporate Yard and animal shelter since at least 1984, and would remain, as part of the new project.

The proposed project would develop the undeveloped portion of the project site with a new park use that would serve existing nearby residential land uses. Although there are residential uses located within the vicinity of the project site, none of these homes or neighborhoods would be divided by project development. In addition, implementation of the proposed project would not disturb or alter access to any existing adjacent uses. Therefore, the proposed project would not physically divide an established community.

b) ***Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?***

**Less Than Significant Impact.** The City's General Plan is the principal land use document guiding development within the City. The City's General Plan is a comprehensive plan that establishes goals, objectives, and policies intended to guide growth and development in the City. The Land Use Element of the General Plan establishes land use designations and develops a long-term land use vision for these land uses throughout the City. The project site is designated L-R on the City's General Plan Land Use Map (City of Desert Hot Springs 2002). Based on the City's Parks and Recreation Master Plan, the current parkland ratio in the City is 1.0 acres per 1,000 residents, which is considerably lower than the Quimby Act recommended ratio of 3.0 acres per 1,000 residents. Although parks are not expressly permitted in the Residential Low Density designation, per the City's Municipal Code, substantial parkland is needed to support existing and future residents within the City. As such, the proposed park is permitted under the existing land use designation to support existing nearby residential development, and reduce the parkland deficit in the City. Consequently, the proposed project would be consistent with the General Plan.

The City's Zoning Code is the primary implementation tool for the General Plan Land Use Element. The Zoning designation for the proposed project is L-R, consistent with the General Plan (City of Desert Hot Springs 2002). The proposed project is a recreational/park use, which is permitted within Residential zones within the City. Consequently, the proposed project would be consistent with the City's Zoning Code and required to comply with applicable development standards.

As the proposed project is consistent with the use of the existing General Plan land use designation and is consistent with the existing zoning code, impacts associated with conflict with a land use plan, policy, or regulation would be less than significant.

### 3.11.3 Mitigation Measures

No mitigation measures are required.

## 3.12 Mineral Resources

### 3.12.1 Environmental Setting

Mineral resources within the Coachella Valley are primarily located in to the east in north Indio and unincorporated Riverside County, along Dillon Road (Riverside County 2015). The California Geological Survey has established a classification system to denote both the location (i.e., zone) and significance of key extractive mineral resources. Areas where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists are classified as a Mineral Resource Zone (MRZ)-2.

The proposed project is mapped in MRZ-3, indicating that it is located in an area that contains mineral deposits, but the significance of which cannot be determined from available data. Although it is mapped in MRZ-3, there are no known mineral resource deposit sites within or near the project site (County of Riverside 2015). Moreover, any potential mineral resources located within or adjacent to the project site would not be commercially viable to extract because all properties in the immediate vicinity have been previously developed with incompatible land uses.

### 3.12.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XII. MINERAL RESOURCES</b> – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**a) *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?***

**No Impact.** Proposed project construction would require use of common construction materials, such as asphalt, concrete, and gravel. These materials are widely available throughout the region; therefore, the proposed project would not result in the loss of regionally or locally designated “significant” deposits of mineral resources (i.e., deposits classified by the California Geological Survey as MRZ-2 or deposits listed as locally important on a general plan).

In addition, the project site is not located within an area known to be underlain by regionally or locally important mineral resources or within an area that has the potential to be underlain by regionally or locally important mineral resources (County of Riverside 2015). Therefore, the proposed project would not result in loss of a known mineral resource.

b) ***Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?***

**No Impact.** The project site is not located within an area known to be underlain by regionally or locally important mineral resources (County of Riverside 2015). In addition, the proposed project would be developed in an area surrounded by existing residential development. The existing land uses would preclude the use of the project site for future mining activities. As such, implementation of the proposed project would not result in the loss of availability of a locally important mineral resource recovery site.

### 3.12.3 Mitigation Measures

No mitigation measures are required.

## 3.13 Noise

### 3.13.1 Environmental Setting

#### **Noise Characteristics**

Sound may be described in terms of level or amplitude (measured in decibels (dB)), frequency or pitch (measured in hertz (Hz) or cycles per second), and duration (measured in seconds or minutes). The standard unit of measurement of the amplitude of sound is the decibel. Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel scale (dBA) performs this compensation by discriminating against low and very high frequencies in a manner approximating the sensitivity of the human ear. Several descriptors of noise (noise metrics) exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise, on a community. These descriptors include the equivalent noise level over a given period ( $L_{eq}$ ), the statistical sound level ( $L_n$ ), the day-night average noise level ( $L_{dn}$ ), and the community noise equivalent level (CNEL). Each of these descriptors uses units of dBA.

$L_{eq}$  is a sound energy level averaged over a specified time period (typically no less than 10 - 15 minutes for environmental studies).  $L_{eq}$  is a single numerical value that represents the amount of variable sound energy received by a receptor during a time interval. For example, a 1-hour  $L_{eq}$  measurement would represent the average amount of energy contained in all the noise that occurred in that hour.  $L_{eq}$  is an effective noise descriptor because of its ability to assess the total time-varying effects of noise on sensitive receptors.  $L_{max}$  is the greatest sound level measured during a designated time interval or event.

Unlike the  $L_{eq}$  metrics,  $L_{dn}$  and CNEL metrics always represent 24-hour periods, usually on an annualized basis.  $L_{dn}$  and CNEL also differ from  $L_{eq}$  because they apply a time-weighted factor designed to emphasize noise events that occur during the evening and nighttime hours (when speech and sleep disturbance is of more concern). "Time weighted" refers to the fact that  $L_{dn}$  and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m.–7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m.–10:00 p.m.) is penalized by adding 5 dB, while nighttime (10:00 p.m.–7:00 a.m.) noise is penalized by adding 10 dB.  $L_{dn}$  differs from CNEL in that the daytime period is defined as 7:00 a.m.–10:00 p.m.,

thus eliminating the evening period.  $L_{dn}$  and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5 dB to 1 dB, and as such are often treated as equivalent to one another.

### Existing Noise Conditions

Noise measurements were conducted on and near the Site in August 2019 to characterize the existing noise levels. Table 15, Measured Noise Levels, provides the location, date, and time the noise measurements were taken. The noise measurements were taken using a SoftdB Piccolo sound level meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The sound level meter meets the current American National Standards Institute standard for a Type 2 (General Use) sound level meter. The sound level meter was calibrated before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Five short-term noise measurement locations that represent existing or proposed sensitive receivers were selected, on and near the perimeter of the Site. These locations are depicted as Receivers 1–5 (ST1–ST5) in Figure 5, Noise Measurement Locations. Short-term noise monitoring location 1 (ST1) is located near the northwest corner of the project site adjacent to Flora Avenue and Cholla Drive and represents ambient noise levels in the residential area to the west. ST2 is located near the northeast corner of the project site adjacent to Flora Avenue and represents ambient noise levels in the residential neighborhood to the north. ST3 is located in the residential neighborhood immediately to the east of the project site, while ST4 is located to the south, on the south side of Hacienda Avenue adjacent to the residences located there. ST5 is located on-site, in order to represent existing ambient noise levels within the future park. The measured energy-averaged ( $L_{eq}$ ) and maximum ( $L_{max}$ ) noise levels and measurement locations are provided in Table 17. The primary noise source at the sites identified in Table 7 was the traffic along adjacent roadways. As shown in Table 17, the measured sound levels ranged from approximately 60 dBA  $L_{eq}$  at ST3 to 64 dBA  $L_{eq}$  at ST2.

**Table 17. Measured Noise Levels**

Receptors	Location	Date	Time	$L_{eq}$ (dBA)	$L_{max}$ (dBA)
ST1	Near northwest project boundary	8/21/2019	9:36 a.m. – 9:51 a.m.	63.1	74.6
ST2	Near northern project boundary	8/21/2019	9:56 a.m. – 10:11 a.m.	63.5	71.2
ST3	Near eastern project boundary	8/21/2019	10:17 a.m. – 10:33 a.m.	59.9	69.9
ST4	Near southern project boundary	8/21/2019	10:39 a.m. – 10:54 p.m.	60.7	75.4
ST5	On-site	8/21/2019	11:00 a.m. – 11:15 a.m.	61.1	76.7

Source: Appendix F.

Notes:  $L_{eq}$  = equivalent continuous sound level (time-averaged sound level);  $L_{max}$  = maximum sound level during the measurement interval; dBA = A-weighted decibels.

### Sensitive Receptors

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would be considered noise- and vibration-sensitive and may warrant unique measures for

protection from intruding noise. Sensitive receptors near the Site include the low-density residential uses located immediately north and northwest of the Site.

These sensitive receptors represent the nearest residential land uses with the potential to be impacted by construction and operation of the project. Additional sensitive receptors are located farther from the Site in the surrounding community and would be less impacted by noise and vibration levels than the above-listed sensitive receptors.

**Regulatory Setting**

**State**

Government Code Section 65302(g) California Government Code Section 65302(g) requires the preparation of a Noise Element in a general plan, which shall identify and appraise the noise problems in the community. The Noise Element shall recognize the guidelines adopted by the Office of Noise Control in the State Department of Health Services and shall quantify, to the extent practicable, current and projected noise levels for the following sources:

- Highways and freeways
- Primary arterials and major local streets
- Passenger and freight on-line railroad operations and ground rapid transit systems
- Aviation and airport-related operations
- Local industrial plants
- Other ground stationary noise sources contributing to the community noise environment.

California General Plan Guidelines

The California General Plan Guidelines, published by the Governor’s Office of Planning and Research, provides guidance for the acceptability of specific land use types within areas of specific noise exposure. Table 16, Land Use Compatibility for Community Noise Environments, presents guidelines for determining acceptable and unacceptable community noise exposure limits for various land use categories. The guidelines also present adjustment factors that may be used to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community’s sensitivity to noise, and the community’s assessment of the relative importance of noise pollution (shown in Table 18). Office of Planning and Research guidelines are advisory in nature. Local jurisdictions, including the City of Desert Hot Springs, have the responsibility to set specific noise standards based on local conditions.

**Table 18. Land Use Compatibility for Community Noise Environments (State of California)**

	Community Noise Exposure (CNEL)			
	<i>Normally Acceptable<sup>a</sup></i>	<i>Conditionally Acceptable<sup>b</sup></i>	<i>Normally Unacceptable<sup>c</sup></i>	<i>Clearly Unacceptable<sup>d</sup></i>
Residential – low density, single-family, duplex, mobile homes	50-60	55-70	70-75	75-85
Residential – multiple-family	50-65	60-70	70-75	70-85
Transit lodging – motel, hotels	50-65	60-70	70-80	80-85

**Table 18. Land Use Compatibility for Community Noise Environments (State of California)**

	Community Noise Exposure (CNEL)			
	<i>Normally Acceptable<sup>a</sup></i>	<i>Conditionally Acceptable<sup>b</sup></i>	<i>Normally Unacceptable<sup>c</sup></i>	<i>Clearly Unacceptable<sup>d</sup></i>
Schools, libraries, churches, hospitals, nursing homes	50-70	60-70	70-80	80-85
Auditoriums, concert halls, amphitheatres	NA	50-70	NA	65-85
Sports arenas, outdoor spectators sports	NA	50-75	NA	70-85
Playgrounds, neighborhood parks	50-70	NA	67.5-77.5	72.5-85
Golf courses, riding stables, water recreation, cemeteries	50-70	NA	70-80	80-85
Office buildings, business commercial and professional	50-70	67.5-77.5	75-85	NA
Industrial, manufacturing, utilities, agriculture	50-75	70-80	75-85	NA

**Source:** OPR 2003

**Notes:** CNEL = community noise equivalent level; NA = not applicable

- <sup>a</sup> Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
- <sup>b</sup> Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features have been included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.
- <sup>c</sup> Normally Unacceptable: New construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise-insulation features must be included in the design.
- <sup>d</sup> Clearly Unacceptable: New construction or development should generally not be undertaken.

### ***City of Desert Hot Springs***

The Noise Element of the City of Desert Hot Springs General Plan (City of Desert Hot Springs. 2000) utilizes a Land Use Compatibility Noise Matrix for Community Noise Exposure Standards, as shown here in Table 19 (City of Desert Hot Springs Land Use Compatibility Noise Guidelines). Generally, the noise levels specified in Table 19 are consistent with the guidance provided by the State of California (Table 19), but there are some differences; most notably, the noise compatibility standards for multi-family uses differ from those for single-family uses somewhat in the State standards but do not differ from single-family uses under the City's standards.

**Table 19. City of Desert Hot Springs Land Use Compatibility Noise Guidelines**

Land Uses	CNEL						
	50	55	60	65	70	75	80
Residential Land Uses: Single & Multi-family Dwellings, Group Quarters Mobile Homes	A						
		B					
			C				
					D		
Transient Lodging: Hotels & Motels	A						
		B					
				C			
						D	
School Classrooms, Libraries, Churches, Hospitals, Nursing Homes & Convalescent Hospitals	A						
		B					
				C			
						D	
Recreational Land Uses: Golf Courses, Open Space (walking, bicycling, or horseback riding trails, etc.)	A						
		B					
			C				
						D	
Office Building, Personal Business, & Professional Services	A						
		B					
				C			
						D	
Commercial Land Uses: Retail Trade, Movie Theater, Restaurant, Bars, Entertainment, Services	A						
		B					
				C			
						D	
Heavy Commercial/Industrial: Wholesale, Manufacturing, Utilities, Transport, Communication	A						
					C		
						D	
Auditorium, Concert Halls, Amphitheaters, Music Shells (may be sensitive receptor/generator)		B					
					D		
Sports Arenas, Outdoor Spectator Sports		B					
					D		

A = NORMALLY ACCEPTABLE - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

B = CONDITIONALLY ACCEPTABLE - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

C = NORMALLY UNACCEPTABLE - New Construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

D = CLEARLY UNACCEPTABLE - New construction or development should generally not be undertaken.

Source: City of Desert Hot Springs. 2000.

The interior and exterior noise standards are in terms of the CNEL noise metric. The standards state that for residential land uses, exterior noise exposure levels of up to 60 dBA CNEL are considered “normally acceptable” and noise levels of up to 65 dBA CNEL are considered “conditionally acceptable”. Heavy Commercial/Industrial land uses are considered “normally acceptable” in environments where the noise level reaches up to 75 dBA CNEL.

The City’s Municipal Code Section 8.12.030 states that it is unlawful for any person to make, suffer, permit, allow, continue, or cause to be made, suffered, permitted, allowed, or continued, within City limits or within 200 feet

thereof, any noise disturbance. Per Section 8.12.020 a noise disturbance is any sound that endangers safety or health of any person, disturbs a reasonable person of normal sensitivities, or endangers personal or real property.

Section 8.12.090 of the Municipal Code states that it is unlawful for any person to cause, suffer, allow, or permit any of the following outside of the following hours: Monday through Friday, 7:00 AM through 6:00 PM.; Saturday, 8:00 AM through 6:00 PM and Sunday, 9:00 AM through 5:00 PM.

- Loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, garbage cans, or similar objects in such a manner as to cause a noise disturbance across a residential real property boundary.
- Operating any mechanically powered saw, sander, drill, grinder, lawn or garden tool, or similar device so as to cause a noise disturbance across a residential real property boundary.

Under Section 8.12.100 of the Municipal Code, it is unlawful for any person to cause, suffer, allow or permit any construction, drilling or demolition work, or the use of tools or equipment therefore, between the hours of 5:00 p.m. of each day and 7:00 a.m. of the next day, except when daylight savings time is in effect. During such times as daylight savings is in effect in the City, no such activities shall be permitted between the hours of 6:00 p.m. of each day and 6:00 a.m. of the next day. No such activities shall be permitted on Sundays.

Section 8.12.110 of the Municipal Code, Special provisions lists activities that are exempt from the provisions of this chapter including the following:

1. Those noise events in the community (e.g., arterial traffic noise) that are more accurately measured by application of the general plan noise element policy;
2. School bands, school athletic and school entertainment events;
3. Outdoor gatherings, public dances, shows and sporting and entertainment events provided such events are authorized by the City via permit, or previously approved development agreement;
4. Activities conducted in public parks and public playgrounds with a valid City permit;

In Section 9.04.030, the Ordinance states that except as herein otherwise provided, no person shall be engaged or employed nor shall any person cause any other person to be engaged or employed in any work of construction, erection, alteration, or repair, addition to or improvement of any building, structure, road or improvement to realty between the hours of 5:00 PM of each day and 7:00 AM of the next day, except when daylight savings time is in effect. When daylight savings time is in effect, no such activities shall be permitted between the hours of 6:00 PM of each day and 6:00 AM of the next day. Additionally, no such activities shall be permitted on Sundays.

Section 17.40.180 No loudspeaker, bells, gongs, buzzers, mechanical equipment or other sounds, attention attracting, or communication device associated with any use shall be discernible beyond any boundary line of the parcel, except fire protection devices, burglar alarms and church bells. The following provisions shall apply:

- A. In residential areas, no exterior noise level shall exceed 65 dBA and no interior noise level shall exceed 45 dBA.
- B. All residential developments shall incorporate the following standards to mitigate noise levels:  
Increase the distance between the noise source and receiver.
  1. Locate land uses not sensitive to noise (i.e., parking lots, garages, maintenance facilities, utility areas, etc.) between the noise source and the receiver.

- 2. Bedrooms should be located on the side of the structure away from major rights-of-way.
- 3. Quiet outdoor spaces may be provided next to a noisy right-of-way by creating a U-shaped development which faces away from the right-of-way.
- C. The minimum acceptable surface weight for a noise barrier is 4 pounds per square foot (equivalent to 3/4-inch plywood). The barrier shall be of a continuous material which is resistant to sound including: (1) masonry block; (2) precast concrete; or (3) earth berm or a combination of earth berm with block concrete.
- D. Noise barriers shall interrupt the line of sight between noise source and receiver.

Section 17.40.300 of the Municipal Code states that no vibration associated with any use shall be permitted which is discernible beyond the boundary line of the property.

### 3.13.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIII. NOISE – Would the project result in:</b>				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) ***Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?***

On-site noise-generating activities associated with the project would include short-term construction activities, as well as on-site operational noise. The project would also generate off-site traffic noise along local roadways in the area.

### Short-Term Construction Impacts

**Less Than Significant with Mitigation Incorporated.** Construction noise and vibration are temporary phenomena. Construction noise and vibration levels vary from hour to hour and day to day, depending on the equipment in use, the operations being performed, and the distance between the source and receptor.

Equipment that would be in operation during construction would include, in part, excavators, graders, backhoes, compressors, welders, and paving equipment. The typical maximum noise levels for various pieces of construction equipment at a distance of 50 feet are presented in Table 20, Construction Equipment Noise Levels. Note that the equipment noise levels presented in Table 20 are maximum noise levels. Typically, construction equipment operates in alternating cycles of full power and low power, producing average noise levels less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time.

**Table 20. Construction Equipment Noise Levels**

Equipment Type	Maximum Noise Level dB(A) at 50 feet
Backhoe	80
Compactor	82
Concrete Mixer	85
Crane	83
Generator	81
Loader	85
Paver	89
Roller	74
Truck	88
Saw	76

Source: DOT 2018

The maximum noise levels at 50 feet for typical construction equipment would be 89 dB for the equipment typically used for this type of development project, although the hourly noise levels would vary. Construction noise in a well-defined area typically attenuates at approximately 6 dB per doubling of distance. Construction equipment would typically be operating all over the project site, both near and far from any one location in the project vicinity. The nearest point of construction activities to any one of the closest noise-sensitive receivers (residences located on all sides) would be approximately 65 feet, and the farthest would be more than 800 feet. Because construction taking place within 65 feet would be temporary and intermittent, and because the site is relatively large, the distance from the nearby receivers to the “acoustic center” (the point from which the energy sum of all construction activity noise, near and far, would be centered on an average or typical basis) is utilized. The nearest noise-sensitive receivers are located approximately 230 feet away from what would be the acoustic center of construction activity. Thus, the distance to construction activities for the closest residences would be as near as 65 feet away, but would typically be approximately 230 feet away.

The Federal Highway Administration's (FHWA) Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at the nearest occupied noise-sensitive land use. (Although the model was funded and promulgated by the FHWA, the RCNM is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the RCNM consist of the receiver/land use types, the equipment type and number of each (e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of hours the equipment typically works per day), and the distance from the noise-sensitive receiver. No topographical or structural shielding was assumed in the modeling. The RCNM has default duty-cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty-cycle values were used for this noise analysis.

Using the FHWA's RCNM construction noise model and construction information, the estimated noise levels from one of the loudest phases of construction (grading) were calculated for the nearest noise-sensitive land uses, as presented in Table 21.

**Table 21. Construction Noise Model Results Summary**

Construction Phase	Construction Noise at Representative Receiver Distances ( $L_{eq}$ (dBA))	
	Nearest Source-Receiver Distance (Approx. 65' Away)	Typical Source-Receiver Distance (Approx. 230' Away)
Demolition	83	73
Site Preparation	82	72
Grading	82	73
Building Construction	79	71
Architectural Coating	71	60
Paving	78	69

Source: Appendix F

Notes:  $L_{eq}$  = equivalent continuous sound level;

As presented in Table 21, the construction noise levels are predicted to range from approximately 71 to 83 dBA  $L_{eq}$  at the nearest existing residences when construction would be near the project boundary, approximately 65 feet away. More typically, when construction activities would take place on the project site both near and far, construction noise would be lower, ranging from approximately 60 to 73 dBA  $L_{eq}$ .

As previously discussed, the City's municipal code prohibits construction between the hours of 5:00 PM of each day and 7:00 AM of the next day, except when daylight savings time is in effect. When daylight savings time is in effect, no such activities are permitted between the hours of 6:00 PM of each day and 6:00 AM of the next day. Additionally, construction is permitted on Sundays. It is anticipated that construction activities associated with the proposed project would take place exclusively during these permitted hours.

Although nearby off-site residences would be exposed to elevated construction noise levels, the exposure would be short-term and would cease upon completion of project construction, and project

construction would not violate the City's standards for construction noise. However, construction noise levels would be substantially higher than existing ambient daytime noise levels. **MM-NOI-1** (Section 3.13.3) would be implemented to substantially reduce construction noise.

### **Long-Term Operational Impacts**

**Less Than Significant Impact.** As described in detail in Section 2.2 (Project Components), the proposed project includes development of approximately 7.6 acres of a 10-acre site as a community park. The remainder of the site would continue to operate as the City's corporate yard. The proposed project would provide parks amenities to local residents, including a football field, a baseball field, a common area and a parking area. The existing animal shelter at the south end of the Corporate Yard would remain in the same location. The proposed park would be open to the public from 7 am to 10 pm daily.

Long-term operational noise associated with the project includes noise from the proposed outdoor events, and from parking lot activities. Long-term operational noise also includes project-generated traffic. Each of these is addressed below.

### ***Outdoor Event Noise***

The proposed project site would host recreational activities including local football and baseball games. The proposed activities could occur during the park's permitted operating hours (i.e., between the hours of 7:00 a.m. to 10:00 p.m.).

Events would be permitted by the City's Community Services Department through a facility rental application/agreement basis, with the City conditioning individual events with a variety of noise-related stipulations, based on the specific characteristics of a particular event. For example, one such stipulation may include a requirement that outdoor events only use non-amplified music after a certain time in the evening or night. Regardless of the specific stipulations, the purpose of these noise-related conditions placed upon events would ensure compliance with the City's applicable noise standards.

### ***Parking Lot Noise Levels***

A comprehensive study of noise levels associated with surface parking lots was published in the Journal of Environmental Engineering and Landscape Management (Volume 12, Issue 2, 2004). The study found that average noise levels during the peak period of use of the parking lot (generally in the morning with arrival of commuters, and in the evening with the departure of commuters), was 47 dBA at 1 meter (3.28 feet) from the outside boundary of the parking lot. The parking area would function as a point source for noise, which means that noise would attenuate at a rate of 6 dBA with each doubling of distance. The parking lot is proposed to be situated in the southwest corner of the project site, no closer than 70 feet from the nearest residential land use. At a distance of 70 feet, parking lot noise levels would be approximately 20 dBA  $L_{eq}$ . Thus, although relatively brief parking lot activities noise (i.e., door slams, engine startups, car alarm "chirps" etc.) would be audible at nearby residences, the overall hourly noise

levels would be quite low, and well below the existing ambient levels. No substantial noise increase would occur.

**Off-Site Traffic Noise Levels**

The proposed project would generate traffic along adjacent arterials and local roadways (i.e., Flora Avenue, Hacienda Avenue and Cholla Drive). The City does not have a specific noise criterion for evaluating off-site noise impacts to residences or noise-sensitive areas from project-related traffic. For the purposes of this noise analysis, such impacts are considered significant when they cause an increase of 5 dB compared to existing noise levels. An increase or decrease in noise level of at least 5 dB is required before a noticeable change in community response would be expected (Caltrans 2013). Thus, a clearly perceptible increase (+5 dB) in noise exposure of sensitive receptors could be considered significant.

Noise from the nearby roadways at 100 feet from the centerline was calculated using the FHWA Traffic Noise Model (TNM version 2.5) (FHWA 2004). The potential off-site noise impacts caused by the increase in vehicular traffic from the operation of the project on the nearby roadways were calculated for the following conditions: Existing Year, Existing Year with Project, Future Year (Existing plus Ambient Growth plus Cumulative Projects) without Project, and Future Year with Project. The RCNM inputs and outputs are provided in Appendix H.

Table 22 summarizes the traffic noise modeling analyses. As shown in Table 22, noise levels are expected to increase by a maximum of 0.9 decibel as a result of the project. The increase would be well below the threshold of significance of 5 dB and would result in a less than audible change.

**Table 22. Change in Noise Levels as a Result of Project (dBA CNEL)**

Roadway	Segment	CNEL at 100 Feet					
		Existing (2019)	Existing (2019) with Project	Future (Existing plus Ambient Growth plus Cumulative Projects)	Future (Existing plus Ambient Growth plus Cumulative Projects) with Project	Maximum Change in Noise Level	Potential Significant Impact?
Flora Avenue	Cholla Drive to West Drive	44	44.9	47.1	47.7	0.9	No
Hacienda Avenue	Cholla Drive to West Drive	50	50.4	53.3	53.5	0.4	No
Cholla Drive	Flora Avenue to Hacienda Avenue	49.9	50.6	53.2	53.6	0.7	No

Source: Appendix F

**b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?**

**Less Than Significant Impact.** Construction activities may expose persons to excessive groundborne vibration or groundborne noise, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2013). Information from Caltrans indicates that continuous vibrations with a peak particle velocity of approximately 0.1 inch/second

begin to cause annoyance. Heavier pieces of construction equipment, such as bulldozers, have peak particle velocities of approximately 0.089 inch/second or less at a distance of 25 feet (DOT 2018).

Groundborne vibration typically attenuates over short distances. At the distance from the nearest residence to the construction area (approximately 65 feet) and with the anticipated construction equipment, the peak particle velocity would be approximately 0.021 inch/second. At the closest sensitive receptors, vibration levels would be well below the vibration threshold of potential annoyance of 0.1 inch/second.

Construction can also affect nearby buildings by inflicting damage from vibration. However, construction vibration associated with this project would not result in structural building damage. Building damage typically occurs at vibration levels of 0.5 inch/second or greater for buildings of reinforced-concrete, steel, or timber construction. The heavier pieces of construction equipment used for this project would include backhoes, front-end loaders, and flat-bed trucks. Pile driving, blasting, or other special construction techniques would not be used for construction of the proposed project; therefore, excessive groundborne vibration and groundborne noise with the potential to adversely affect nearby buildings would not be generated. Once operational, the project would not generate groundborne vibration. As such, no building damage would be expected to occur as a result of project-related vibration during construction or operation.

- c) ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

**No Impact.** The project area is not located within the vicinity of a private airstrip. The nearest airport to the project is Palm Springs International Airport, located approximately 7 miles south of the project area (Caltrans 2019). The proposed project area is located outside of the Airport Influence Area Boundary of the Palm Springs International Airport (Riverside County 2005). As such, the project area is not located within a 2-mile radius of any public airport, and no airport land use plans apply to the site. Therefore, the project would not expose people recreating or working in the project area to excessive noise related to public airports.

### 3.13.3 Mitigation Measures

**MM-NOI-1** The following shall be implemented during project construction:

- Construction shall not take place between the hours of 5:00 p.m. and 7:00 a.m. (or between the hours of 6:00 p.m. and 6:00 a.m. when daylight savings time is in effect), or at any time on Sundays.
- Stationary construction noise sources such as generators or pumps shall be located at least 100 feet from sensitive land uses.
- Construction staging areas shall be located as far from noise-sensitive land uses.
- During construction, the contractor shall ensure all construction equipment is equipped with appropriate noise-attenuating devices. Idling equipment shall be turned off when not in use.

- Equipment shall be maintained so that vehicles and their loads are secured from rattling and banging.

### 3.14 Population and Housing

#### 3.14.1 Environmental Setting

The area surrounding the project site has seen constant growth and urbanization for over 160 years (SCAG 2016). The City’s population was 25,200 in 2008 (SCAG 2016). As of January 2019, the City’s population is 29,251 (DOF 2019). The City’s population is anticipated to be 58,100 by 2035 (SCAG 2016).

#### 3.14.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIV. POPULATION AND HOUSING – Would the project:</b>				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) ***Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

**No Impact.** The proposed project would include development of the new park with sports fields on the project site, and retain the existing Corporate Yard land uses. The proposed project would not include the construction of any new residences or businesses, and is intended for use by the existing population. Therefore, the proposed project would not affect the location, distribution, density, or growth rate of populations within the project vicinity. Further, the proposed project would not create employment opportunities that could induce population growth. Therefore, no impacts related to substantial unplanned population growth would occur, and no mitigation is required.

- b) ***Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?***

**No Impact.** The proposed project would include development of a new park with sports fields. There is no housing currently present on the project site. Consequently, housing displacement would not occur as a

result of project implementation. Although no housing or people would be displaced by the proposed project, land currently zoned for residential land uses would be developed as a park, and would no longer be available for development of future anticipated residents.

Therefore, the proposed project would not result in an impact to the displacement existing people or housing necessitating the construction of replacement housing elsewhere.

### 3.14.3 Mitigation Measures

No mitigation measures are required.

## 3.15 Public Services

### 3.15.1 Environmental Setting

#### **Fire Protection**

The City contracts with Riverside County Fire Department/Cal Fire (RCFD) for a full range of fire protection services provided 24 hours a day 7 days a week. The RCFD is staffed with a combination of County and State of California Department of Forestry & Fire Protection employees. The City has two RCFD fire stations, Battalion 10, Station 37 is the City's busiest fire station and is located at 65958 Pierson Blvd, approximately 0.4 miles north of the proposed project. Battalion 10, Station 36; located at 11535 Karen Avenue is approximately 2.9 miles west of the project site.

In addition to the other RCFD located in the Coachella Valley, the department maintains a cooperative mutual aid agreement with other agencies and communities to assist in suppressing fire or controlling emergency incidents. Mutual aid is an agreement among emergency responders to lend assistance across jurisdictions provided resources are available and is not to the detriment of their own service area.

#### **Police Services**

Police services are provided to the project area by the Desert Hot Springs Police Department. The police department operates out of a single location and is located at 65-950 Pierson Blvd, approximately 0.4 miles north of the project site.

#### **Schools**

The project site and surrounding area is located within the Palm Springs Unified School District (PSUSD). The PSUSD provides kindergarten through 12<sup>th</sup> grade educational services and facilities and currently operates 19 elementary schools, 5 middle schools, 4 high schools, and 4 alternative schools.

Within the City and its sphere of influence, PSUSD operates five elementary schools, one middle school, one alternative high school, and one high school. The nearest PSUSD school to the project site is Two Bunch Palms Elementary school, located 0.6 miles south of the project site.

#### **Parks**

See Section 3.16, Recreation

**Other Public Facilities**

The Desert Hot Springs Public Library is located at 11691 West Drive and is a branch of the Riverside County Library System. The Library contains 29,728 volumes within a 3,500 square foot building (City of Desert Hot Springs 2002).

3.15.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XV. PUBLIC SERVICES</b>				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:*

**Fire protection?**

**Less Than Significant Impact.** As discussed in Section 3.17, Transportation/Traffic, the proposed project would not result in a substantial increase in traffic congestion or significant impacts at local intersections that would delay emergency vehicles. The project site would include two access points: one on Hacienda Avenue and one on Cholla Drive. Development of two access points would make it possible to utilize one as an emergency access, if needed, without restricted access to/from the site. In addition, the proposed project would comply with all Fire Code requirements and the proposed site plan would require approval by the RCFD prior to project implementation. The proposed project would not impair emergency response vehicles, increase times response times, and would not substantially increase calls for service. As such, the response profile for the area would not be significantly impacted in terms of service delivery, staffing requirements, facilities, and equipment.

Although the proposed project would include development of a new park, the project site is located in a developed area that can be easily accessed by the fire department. The proposed project is intended to serve the existing population around the project area and would not induce population growth or significantly increase visitors to the service area. Therefore, the fire department would be able to maintain current levels of service provided to the project site and project vicinity.

***Police protection?***

**Less Than Significant Impact.** Police protection and law enforcement services are provided to the City by the Desert Hot Springs Police Department (DHSPD). The project site is serviced by the police station located at 65950 Pierson Boulevard, approximately 0.4 miles north of the site. Although the proposed project would include construction of a new park, the project is intended to serve the existing population in and around the project vicinity and would not significantly increase visitors to the area. Therefore, DHSPD would be able to maintain current levels of service provided to the project site without the need for new police facilities.

***Schools?***

**No Impact.** Implementation of the proposed project would not alter existing school facilities or result in an increase in population that would generate new students in the school district.

***Parks?***

**Less Than Significant Impact.** According to the City Parks and Recreation Master Plan (City of Desert Hot Springs 2013), the City has a current ratio of one acre per 1,000 residents, which is considerably below the Quimby-recommended ratio of three acres per 1,000 residents. To meet the Quimby standard, the Master Plan identifies a need for an additional 151 acres of parkland by buildout of the City.

The proposed project includes the development of a new City park with two sports fields. Therefore, project implementation would have a positive impact on the City's existing park acreage and would help the City in meeting established standards.

***Other public facilities?***

**No Impact.** Implementation of the proposed project would not include any new housing, businesses, or other development that would require new or expanded other public facilities such as hospitals or libraries in the area surrounding the project site.

### 3.15.3 Mitigation Measures

No mitigation measures are required.

## 3.16 Recreation

### 3.16.1 Environmental Setting

The City offers a variety of passive and active recreational opportunities for residents and visitors to the region. According to the Desert Hot Spring's Final Parks and Recreation Master Plan, there are approximately 27.29 total acres of parkland. There are seven parks, recreational facilities including a skate park, two community centers, a Community Health & Wellness Center/Boys & Girls Club, Senior Center and the Cabot's Pueblo Museum. None of these facilities is within or in close proximity to the project site. Guy J. Tedesco Park, located approximately 0.34 miles east of the project site, is the closest recreation facility to the project site. This park encompasses 6.29 acres, featuring a BMX park, playground picnic area, basketball court, and teen center.

3.16.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVI. RECREATION</b>				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?***

**No Impact.** The proposed project includes development of an approximately 7.5-acre park consisting of a football field, baseball field, common area with concessions and restroom, and parking and circulation. The purpose of the proposed project is to develop the underutilized parcels as a park, which would provide additional recreational opportunities consistent with the Parks and Recreation Master Plan. The park is proposed adjacent to existing residential development where no nearby recreation facilities are developed.

Development of the proposed park would provide additional parkland to residents, reducing the demand on existing parks within the City and slowing physical deterioration at existing facilities. As such, project implementation would not result in substantial physical deterioration of existing recreational facilities within the City.

Further, as described in Section 3.14, Population and Housing, no residential or commercial land uses are proposed as part of the project that would increase population or employment growth that could result in accelerated use of existing recreational facilities within the City.

**b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?***

**Less Than Significant Impact with Mitigation Incorporated.** There is no identifiable adverse physical impact to the environment resulting from construction of the proposed park. As presented in this IS/MND, potential project-related impacts are either less than significant or less than significant with mitigation incorporated. Mitigation has been proposed for impacts related to biological resources (refer to **MM BIO-1** and **MM BIO-2** in Section 4.4). Additionally, mitigation has been proposed for impacts related to Cultural Resources and TCRs (refer to **MM CUL-1** and **MM CUL-2** in Sections 3.5 and 3.18). In addition, mitigation has been proposed for impacts to paleontological resources (refer to **MM GEO-1** in Section 3.7),

### 3.16.3 Mitigation Measures

No additional mitigation measures are required.

## 3.17 Transportation

### 3.17.1 Environmental Setting

#### Methodology

##### **Study Area and Scope**

Regional access to the project would be via Interstate (I-) 10 and State Route (SR)-62. The roadway network in the City generally follows a north-south grid pattern and the transportation within the City is provided by arterials such as Pierson Boulevard and collector streets such as Palm Drive. Local access to the project would be via Flora Avenue, Cholla Drive and Hacienda Avenue. The project driveway along Cholla Drive would be full access and the driveway along Hacienda Avenue would operate as a right-in-right-out only.

The study area is comprised of three intersections that would mostly be impacted by the project and the two proposed access points to the project site. Figure 6 illustrates the location of the study area intersections. Study area intersections are as follows:

1. Cholla Drive/Flora Avenue
2. Cholla Drive/Hacienda Avenue
3. West Drive/Hacienda Avenue
4. Cholla Drive Project Access
5. Hacienda Avenue Project Access

This analysis focuses on the weekday AM (7:00 to 9:00 a.m.) peak period and the PM (4:00 to 6:00 p.m.) peak period. The peak periods represent the highest cumulative total traffic for the adjacent street system. The intersections were analyzed for the following study scenarios:

- **Existing Conditions** – The study area intersections were analyzed for weekday AM and PM peak hour traffic volumes and operations. The existing conditions analyzed are representative of the year 2019.
- **Existing plus Project Conditions** – This scenario includes analysis of weekday AM and PM peak hour traffic volumes, and traffic operations with project traffic added to the existing conditions. Project traffic comprises of traffic generated from the proposed park use. This traffic was distributed and assigned to the roadway segments and intersections in the study area and analyzed under Existing plus Project conditions.
- **Existing plus Ambient Growth Conditions** – This scenario includes analysis of weekday AM and PM peak hour volumes and traffic operations prior to the time the proposed project is completed and is estimated by increasing the existing traffic volumes by an appropriate growth rate. An average growth rate of 2% per year was utilized based on review of recent studies and projects in the vicinity of the project to forecast and analyze the Existing plus Ambient Growth traffic volumes and conditions.

- **Existing plus Ambient Growth plus Project Conditions** - This scenario includes analysis of weekday AM and PM peak hour traffic volumes, and traffic operations with project traffic added to the Existing plus Ambient Growth conditions.
- **Existing plus Ambient Growth plus Project plus Cumulative Projects Conditions** – This scenario includes analysis of weekday AM and PM peak hour volumes and traffic operations with traffic generated that by other approved/pending projects in the study area within a foreseeable period and added to Existing plus Ambient Growth plus Project traffic volumes and conditions.

**Intersection Analysis Methodology**

Intersections within the study area were analyzed using the methodologies described in the Highway Capacity Manual, Sixth Edition: A Guide for Multimodal Mobility Analysis (HCM) intersection analysis methodology to analyze the operation of signalized and unsignalized study intersections (TRB 2016). It should be noted that all study intersections are currently unsignalized. The HCM methodology describes the operation of an intersection using a range of Levels of Service (LOS) from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding control delay experienced per vehicle for unsignalized intersections. Table 23 shows the LOS for unsignalized and signalized intersections under the HCM methodology (delay).

**Table 23. Level of Service for Intersections Using HCM Methodology**

Level of Service	Unsignalized Intersections Control Delay (in seconds)	Signalized Intersections Control Delay (in seconds)
A	< 10.0	< 10.0
B	> 10.0 to < 15.0	> 10.0 to < 20.0
C	> 15.0 to < 25.0	> 20.0 to < 35.0
D	> 25.0 to < 35.0	> 35.0 to < 55.0
E	> 35.0 to < 50.0	> 55.0 to < 80.0
F	> 50.0	> 80.0

Source: TRB 2016

**Significance Criteria**

The City of Desert Hot Springs General Plan Circulation Element has established LOS D as the minimum acceptable LOS for the City’s intersections and roadway segments to assure minimal level of peak hour operations. Based on the City-established performance standards, a significant impact would occur if the proposed project causes an intersection to worsen to LOS E or F, from LOS D or better. To reduce a potential impact to a less than significant level, feasible mitigation measures should be identified that will maintain the acceptable LOS. If a project is forecast to worsen a facility already operating at LOS E or F under pre-project conditions, proposed mitigation measures should maintain operation of the impacted facility at pre-project conditions.

Existing Conditions

**Existing Roadway System**

**Flora Avenue** is a two-lane, east-west, undivided roadway in the study area and is a unclassified roadway in the City’s General Plan – Circulation Element. Parking is allowed along Flora Avenue; however, parking is only allowed on the northern side of the street along the portion of Flora Avenue that is adjacent to the project site. The speed limit is 30 mph within the study area. Existing (ADT count along Flora Avenue between Cholla Drive and West Drive was observed to be 319 vehicles.

**Hacienda Avenue** is a two-lane, east-west undivided roadway in the study area and is classified as a Major Collector by the City's General Plan – Circulation Element. Parking is allowed along Hacienda Avenue; however, parking is only allowed on the southern side of the street along the portion of Hacienda Avenue that is adjacent to the project site. The speed limit is 30 mph within the study area. Existing ADT count along Hacienda Avenue between Cholla Drive and West Drive was observed to be 1,733 vehicles.

**Cholla Drive** is a two-lane, north-south undivided roadway in the study area and is classified as a Secondary by the City's General Plan – Circulation Element. Parking is allowed along Cholla Drive; however, parking is only allowed on the western side of the street along the portion of Cholla Drive that is adjacent to the project site. The speed limit is 30 mph within the study area. Existing ADT count along Cholla Drive between Flora Avenue and Hacienda Avenue was observed to be 1,795 vehicles.

**West Drive** is a two-lane, north-south undivided roadway in the study area and is classified as a Minor Collector by the City's General Plan – Circulation Element. Parking is allowed along some portions of West Drive, and the speed limit is 30 mph within the study area.

### **Existing Transit System**

Public transportation in the City is provided primarily by the Sunline Transit Agency (STA) (City of Desert Hot Springs 2000). There are no routes that directly serve the study area, however STA offers a “Sun Dial” service that provides curb-to-curb service from home to destination (City of Desert Hot Springs 2000).

### ***Sunline Transit Agency (STA)***

STA is a Joint Powers Agreement (JPA) consisting of the County of Riverside, and the Cities of Coachella, Desert Hot Springs, Indio, Palm Desert, Palm Springs, Cathedral, Indian Wells, La Quinta, and Rancho Mirage (STA 2019). STA's service area encompasses 1,120 square miles of the Coachella Valley, offering services to the Cities of Cathedral, Coachella, Desert Hot Springs, Indian Wells, Indio, La Quinta, Palm Desert, Palm Springs, Rancho Mirage, and the unincorporated communities of Bermuda Dunes, Desert Edge, Mecca, North Shore, Oasis, Thermal and Thousand Palms (STA 2019).

STA operates 19 bus lines, maintains 665 bus stops and estimates to serve 3.9 million fixed route individual passenger boardings from 2018 to 2019 (STA 2019). Their fixed bus routes operate 363 days a year on Monday through Friday from 5:00 am to 11:00 pm, and on the weekends from 5:00 am to 10:00 pm (STA 2019). STA bus routes generally operate every 20 to 90 minutes (STA 2019). Two routes serve the City and are further discussed below.

### **Bus Line 14**

Bus Line 14 serves the City as well as the City of Palm Springs. Approximately 602,574 passengers used Bus Line 14 from 2017 – 2018 (STA 2019). This route has no bus stops that directly serve the project site. The closest Bus Line 14 stop to the project site is Stop 23, Palm at Estrella, approximately 0.6 miles east. Bus Line 14 is considered a key STA transit route (STA 2019).

### **Bus Line 15**

Bus Line 15 serves Desert Edge to the City. Approximately 113,705 passengers used Bus Line 15 from 2017 – 2018 (STA 2019). Like Bus Line 14, this route has no bus stops directly serving the project site. The closest bus stop to the project site is located at Stop 3 on Hacienda at Palm, approximately 0.5 miles east.

### **Existing Pedestrian and Bicycle Facilities**

The City's Bicycle and Pedestrian Master Plan was finalized in February 2018. The City of Desert Hot Spring Bicycle and Pedestrian Master Plan is used a guide to improve bicycling and walking activity throughout the City.

#### ***Pedestrian Facilities***

The project site serves active transportation users, as its surrounding areas are mainly residential neighborhoods. Most of the study area roadways are constructed with curbs, gutters, and sidewalks. The portion of Cholla Drive adjacent to the project site has a sidewalk only on the west side of the street. The portion of Flora Avenue adjacent to the project site has a sidewalk only on the north side of the street. The portion of Hacienda Avenue adjacent to the Project site has a sidewalk only on the south side of the street. West Drive is constructed with curbs, gutters, and sidewalks on both sides of the street within the study area.

The project would be responsible for half-width improvements, which would include constructing sidewalks along the project frontage along Cholla Drive and Hacienda Avenue. A pedestrian access to Flora Avenue from the walkway between the corporate yard and baseball field may be proposed at a later date to improve pedestrian connectivity to the site.

#### ***Bicycle Facilities***

As identified by Caltrans, the following classes are used to identify bicycle facilities within the City:

- **Class I Bike Paths** are hard-surface routes within an exclusive right-of-way physically separated from vehicular roadways and intended specifically for non-motorized use.
- **Class II Bike Lanes** are marked bicycle lanes within roadways adjacent to the curb lane, delineated by appropriate striping and signage.
- **Class III Bike Routes** are marked by a series of signs designating a preferred route between destinations such as residential neighborhoods and shopping areas. These routes share the right-of-way with on-road vehicles.

There are no Class I Bike paths in the City (City of Desert Hot Springs 2019).

According to the City's 2019 Bicycle and Pedestrian Master Plan, existing bike lanes include a class III bike route on West Drive and a class II bike lane on Cholla Drive. Additional bicycle facilities are proposed in the areas surrounding the project site (City of Desert Hot Spring 2019).

### **Existing Traffic Volumes**

Existing weekday ADT counts at the roadway segments and peak hour turn movement counts at the study intersections were conducted in September 2019, during a typical non-holiday week while schools were in session. Traffic count worksheets are provided in Appendix G.

### **Existing Intersection Operations**

Table 24 shows the intersection operations during both the AM and the PM peak hours under the existing conditions. LOS worksheets are provided in Appendix G. All study area intersections are currently operating at LOS C or better under Existing conditions.

**Table 24. Existing Weekday Peak Hour Intersection LOS**

No.	Intersection	Control	AM Peak		PM Peak	
			Delay <sup>1</sup>	LOS <sup>2</sup>	Delay <sup>1</sup>	LOS <sup>2</sup>
1	Cholla Drive/Flora Avenue	unsignalized	8.8	A	7.4	A
2	Cholla Drive/Hacienda Avenue	unsignalized	9.4	A	7.6	A

### 3.17.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVII. TRANSPORTATION – Would the project:</b>				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) **Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?**

**Less Than Significant Impact.** The proposed project would not conflict with an applicable plan, ordinance, or policy that establishes measures of effectiveness for the performance of the circulation system, as further discussed below.

#### Trip Generation

A review of trip generation rates for a park use was conducted to determine the most appropriate daily and peak hour trip rate for the project. It should be noted that the San Diego Association of Governments (SANDAG) Brief Guide of Vehicular Trip Generation Rates for the San Diego Region, April 2002, City Park generation rate (i.e., 50 trips per acre) is significantly higher than the Institute of Transportation Engineers Trip Generation, 10th Edition (ITE 2017), Public Park generation rate (i.e. 0.78 trips per acre). Therefore, to provide a conservative analysis, the SANDAG trip generation rate was selected to determine the trip generation of the project.

Table 25 presents the trip generation for the project. Since the project proposes various outdoor events and has less enclosed facilities, to be conservative, the City Park trip rate was been utilized to estimate the trip generation for the park site (7.5 acres). It should be noted that this trip rate is representative of a typical weekday and weekend activities such as special events related to sports fields may generate additional trips.

**Table 25. Project Trip Generation**

Land Use	Size/Units	Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
<b>Trip Rates<sup>1</sup></b>								
City Park (w meeting rooms and sports facilities)	per acre	50.0	50%	50%	13%	50%	50%	9%
<b>Trip Generation</b>								
Corporate Yard Park	7.50 acres	375	25	24	49	17	17	34

Source: Appendix G

Notes:

<sup>1</sup> Daily trip rate AM and PM trip rate from SANDAG's Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002.

As shown in Table 25, the proposed project would generate approximately 375 daily trips, including 49 AM peak-hour trips (25 inbound and 24 outbound), and 34 PM peak-hour trips (17 inbound and 17 outbound).

**Trip Distribution and Assignment**

Local trip distribution for the project was determined based on logical commute patterns, the surrounding roadway network and review of recent traffic studies prepared for other developments in the vicinity of the project. Approximately 25% of the project traffic would be expected to travel east along Hacienda Avenue, 25% and 15% would travel north along West Drive and Cholla Drive, respectively. Approximately 15% is forecast to travel south along Cholla Drive and West Drive and about 5% would travel west along Flora Avenue.

The trip distribution percentages to and from the intersection were applied to the proposed project's weekday AM and PM peak-hour trip generation estimates to calculate the project trip assignment (i.e., AM and PM peak-hour volumes that the project would generate).

**Existing plus Project Conditions**

The project-specific impacts under Existing plus Project conditions within the study area for intersection operations were analyzed based on the City of Desert Hot Springs LOS criteria. Project traffic volumes were added to the Existing traffic volumes to derive the Existing plus Project traffic condition.

**Intersection Operations**

An intersection LOS analysis was prepared for the Existing plus Project condition using the HCM methodology for unsignalized intersections. Table 26 summarizes the results of the Existing plus Project intersection analysis for the AM and PM peak hours.

**Table 26. Existing Plus Project Peak Hour Intersection LOS**

No.	Intersection	Control	Peak Hour Delay – LOS		Significant Impact?	
			AM	PM	AM	PM

1	Cholla Drive/Flora Avenue	unsignalized	9.0 - A	7.4 - A	No	No
2	Cholla Drive/Hacienda Avenue	unsignalized	9.7 - A	7.6 - A	No	No
3	West Drive/Hacienda Avenue	unsignalized	17.8 - C	9.4 - A	No	No
4	Cholla Drive/Project Access	unsignalized	10.9 - B	9.3 - A	No	No
5	Project Access/Hacienda Avenue	unsignalized	10.9 - B	9.4 - A	No	No

Source: Appendix G

Notes:

<sup>1</sup> Delay (in seconds) for unsignalized intersections

<sup>2</sup> Level of Service (LOS)

As shown in Table 26, all of the study area intersections are forecast to continue to operate with satisfactory LOS, at LOS C or better, under Existing plus Project conditions during both peak hours. As such, the proposed project would not significantly affect study area intersections under Existing plus Project conditions.

**Existing plus Ambient Growth plus Project Conditions**

The project-specific impacts under Existing plus Ambient Growth plus Project conditions within the study area for intersection operations were analyzed based on the City of Desert Hot Springs LOS criteria. Project traffic volumes were added to the Existing plus Ambient Growth traffic volumes to derive the Existing plus Ambient Growth plus Project traffic condition.

**Intersection Operations**

An intersection LOS analysis was prepared for the Existing plus Ambient Growth plus Project condition using the HCM methodology for unsignalized intersections. Table 27 summarizes the results of the Existing plus Ambient Growth plus Project intersection analysis for the AM and PM peak hours. Detailed LOS calculation worksheets are included in Appendix G.

**Table 27. Existing Plus Ambient Growth Plus Project Peak Hour Intersection LOS**

No.	Intersection	Control	Peak Hour Delay – LOS		Significant Impact?	
			AM	PM	AM	PM
1	Cholla Drive/Flora Avenue	unsignalized	9.2 - A	7.5 - A	No	No
2	Cholla Drive/Hacienda Avenue	unsignalized	9.9 - A	7.7 - A	No	No
3	West Drive/Hacienda Avenue	unsignalized	19.9 - C	9.6 - A	No	No
4	Cholla Drive/Project Access	unsignalized	11.0 - B	9.3 - A	No	No
5	Project Access/Hacienda Avenue	unsignalized	11.0 - B	9.4 - A	No	No

Source: Appendix G

Notes:

<sup>1</sup> Delay (in seconds) for unsignalized intersections

<sup>2</sup> Level of Service (LOS)

As shown in Table 27, all of the study area intersections are forecast to continue to operate with satisfactory LOS, at LOS C or better, under Existing plus Ambient Growth plus Project conditions during both peak hours. As such, the proposed project would not significantly affect study area intersections under Existing plus Ambient Growth plus Project conditions.

### Existing plus Ambient Growth plus Project plus Cumulative Projects Conditions

The project-specific impacts under Existing plus Ambient Growth plus Project plus Cumulative conditions within the study area for intersection operations were analyzed based on the City of Desert Hot Springs LOS criteria. A list of approved/pending projects was obtained from the City. The location, land use, and trip generation summary of the cumulative projects list is summarized in Table 28. Traffic volumes estimated from trip generation (Table 25) were added to the Existing plus Ambient Growth plus Project traffic volumes.

**Table 28. Cumulative Projects Trip Generation Summary**

Project	Location	Land use/Description	Size/Units	Daily
1. New City Hall <sup>1</sup>	11999 Palm Drive	New single-story office building	13,400 sf	303
2. New Social Services Building <sup>1</sup>	65753 Pierson Blvd	New County Services Building and Commercial Strip Center	80,000 sf	1,807
3. Best Western Hotel and SPA <sup>1</sup>	Southwest corner of 8th Street & Palm Drive	Hotel and SPA	80 rooms	669
4. Hacienda Assisted Care <sup>1</sup>	66753 Hacienda Ave	Assisted Living Facility	12 beds	50
5. Grocery Outlet <sup>2</sup>	Northwest corner of Palm Drive and Park Lane	Retail (Phase I: Gasoline with Convenience store and car wash plus fast food)	20,000 sf	1,399
6. County Library <sup>3</sup>	Pierson Blvd	New County Library	15,000 sf	1,081
7. Marbella Villa Condominiums <sup>1</sup>	15th Street west of Palm Drive	New residential condos, community club house, public art, etc.	404 units	2,198
<b>Total Cumulative Project Trip Generation</b>				<b>7,507</b>

### Intersection Operations

An intersection LOS analysis was prepared for the Existing plus Ambient Growth plus Project plus Cumulative Projects condition using the HCM methodology for unsignalized intersections. Table 29 summarizes the results of the Existing plus Ambient Growth plus Project intersection analysis for the AM and PM peak hours.

**Table 29. Cumulative Conditions Weekday Peak Hour Intersection LOS**

No.	Intersection	Control	Peak Hour Delay – LOS		Significant Impact?	
			AM	PM	AM	PM
1	Cholla Drive/Flora Avenue	unsignalized	9.4 - A	7.6 - A	No	No
2	Cholla Drive/Hacienda Avenue	unsignalized	9.9 - A	7.7 - A	No	No
3	West Drive/Hacienda Avenue	unsignalized	21.7 - C	9.9 - A	No	No
4	Cholla Drive/Project Access	unsignalized	11.1 - B	9.4 - A	No	No
5	Project Access/Hacienda Avenue	unsignalized	11.1 - B	9.5 - A	No	No

Source: Appendix G

Notes:

<sup>1</sup> Delay (in seconds) for unsignalized intersections

<sup>2</sup> Level of Service (LOS)

As shown in Table 29, all of the study area intersections are forecast to continue to operate with satisfactory LOS, at LOS C or better, under Existing plus Ambient Growth plus Project plus Cumulative Projects conditions during both peak hours. As such, the proposed project would not significantly affect study area intersections under Existing plus Ambient Growth plus Project plus Cumulative Projects conditions.

### Conclusion

As shown under the analysis of existing, existing plus ambient growth and cumulative conditions, the proposed project would not result in LOS that conflicts with policies established in the City's General Plan. Therefore, the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

#### **b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?**

**Less Than Significant Impact.** CEQA Guidelines Section 15064.3, subdivision (b), focuses on newly adopted criteria adopted pursuant to SB 743 for determining the significance of transportation impacts. Pursuant to SB 743, the focus of transportation analysis changes from vehicle delay to vehicle miles traveled (VMT). The related updates to the CEQA Guidelines required under SB 743 were approved on December 28, 2018. As stated in CEQA Guidelines Section 15064.3(c), the provisions of Section 15064.3 shall apply prospectively. A lead agency may elect to be governed by the provision of Section 15064.3 immediately. The provisions must be implemented statewide by July 1, 2020.

The project's VMT was estimated using CalEEMod Version 2016.3.2 (CAPCOA 2017). CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant emissions associated with the construction and operational activities from a variety of land use projects, such as residential, commercial, and industrial facilities. CalEEMod does not incorporate any traffic model or local data, and is therefore a conservative estimating tool for VMT. The project's annual VMT is estimated to be 1,241,798, totaling 3,402 on a daily basis.

Per the Technical Advisory on Evaluating Transportation Impacts in CEQA, residential, office and retail projects tend to have the greatest influence on VMT and the projects that decrease local VMT but increase total VMT should be avoided. No residential, office and retail use land uses are proposed as part of the

project. As such, the proposed project would primarily serve the recreational needs of the local residents and is not considered to have a significant VMT impact. Therefore, the proposed project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3(b) and the impacts would be less than significant.

**c) *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?***

**Less than Significant Impact.** The proposed project would be accessed from Cholla Drive via a full-access driveway (main access) and from Hacienda Drive (secondary access) via a right-in-right-out only driveway. The project would be responsible for on-site circulation improvements (driveways and internal drive aisles) and frontage improvements along Cholla Drive and Hacienda Drive. These on-site and adjacent improvements would be designed in accordance with all applicable design standards set forth by the City. The design will undergo City and Fire Department review before approval to ensure that the local development standards for roadways are met without resulting in traffic safety impacts including hazardous design features. The project would not include sharp curves or dangerous intersections. Additionally, as shown in the response to Impact 3.16.2(a), the level of service at the proposed driveway intersections along Cholla Drive (Intersection # 4) and Hacienda Avenue (Intersection # 5) would be LOS B or better and would not cause a significant delay.

**d) *Would the project result in inadequate emergency access?***

**Less than Significant Impact.** As discussed in the response to Impact 3.16.2(c), the project site would be accessible via driveways along Cholla Drive and Hacienda Drive. Each of the proposed driveways would be designed and constructed to City standards and comply with City width, clearance, and turning-radius requirements. The project site would be designed with adequate space for an emergency vehicle to enter the paved common area from the roundabout. There would also be access at the west end of the football field, adjacent to the parking lot and, if necessary, an emergency vehicle could enter the grass area at the southeast corner of the site from Hacienda Avenue. The project site would be accessible to emergency responders during construction and operation of the proposed project. Development of two driveway access points and compliance with all applicable local requirements related to emergency vehicle access and circulation would ensure the proposed project would not result in inadequate emergency access.

### 3.17.3 Mitigation Measures

No mitigation measures are required.

## 3.18 Tribal Cultural Resources

### 3.18.1 Environmental Setting

Assembly Bill (AB) 52, which went into effect on July 1, 2015, requires a lead agency to consider a project's impacts on Tribal Cultural Resources (TCRs). Such resources include sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register or included in a local register of historical resources (PRC Section 21074). AB 52 also gives Lead Agencies the discretion to determine, supported by substantial evidence, whether a resource falling outside the definition stated above nonetheless qualifies as a "tribal cultural resource."

### **Native American Heritage Commission Outreach**

On November 13, 2019, Dudek requested that the Native American Heritage Commission (NAHC) conduct a search of its Sacred Lands File to determine if cultural resources important to Native Americans have been recorded in the project footprint and buffer area. On November 18, 2019, Dudek received a response from NAHC stating that the search of its Sacred Lands File was positive for the presence of Native American cultural resources within one mile of the project site or surrounding vicinity. The NAHC requested that the City contact the following tribes for more information:

- Agua Caliente Band of Cahuilla Indians, Jeff Grubbe, Chairperson
- Agua Caliente Band of Cahuilla Indians, Patricia Garcia, THPO
- Augustine Band of Cahuilla Mission Indians, Amanda Vance, Chairperson
- Cabazon Band of Mission Indians, Doug Welmas, Chairperson
- Cahuilla Band of Indians, Luther Salgado, Chairperson
- Los Coyotes Band of Mission Indians, Shane Chapparosa, Chairperson
- Los Coyotes Band of Mission Indians, John Parada, Environmental Director
- Morongo Band of Mission Indians, Robert Martin, Chairperson
- Morongo Band of Mission Indians, Denisa Torres, Cultural Resource Manager
- Ramona Band of Mission Indians, John Gomez, Environmental Coordinator
- Ramona Band of Cahuilla Mission Indians, Joseph Hamilton, Chairperson
- San Fernando Band of Mission Indians, John Valenzuela, Chairperson
- San Manuel Band of Mission Indians, Lee Clauss, Director of Cultural Resources
- Santa Rosa Band of Mission Indians, Steven Estrada, Chairperson
- Serrano Nation of Mission Indians, Goldie Walker, Chairperson
- Soboba Band of Luiseno Indians, Joseph Ontiveros, Cultural Resource Department
- Soboba Band of Luiseno Indians, Rosemary Morillo, Chairperson
- Soboba Band of Luiseno Indians, Carrie Garcia, Cultural Resources Manager
- Torres-Martinez Desert Cahuilla Indians, Michael Mirelez, Cultural Resource Coordinator

To date, two letter responses have been received. Agua Caliente Band of Cahuilla Indians responded in a letter dated November 27, 2019. The tribal representative stated that the project site is not within the Tribe's reservation, but it is within the Tribes Traditional Use Area. Soboba Band of Luiseno Indians responded in a letter dated November 29, 2019, The tribal representative stated that the project site is outside of the existing reservation, but the project site falls within the Tribe's Traditional Use Area. No information has been received documenting any known TCRs that would be impacted by the proposed project.

### **Assembly Bill 52 Outreach**

The City requested list of Native American contacts from the NAHC. On April 9, 2020, the City received a response from the NAHC with a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the proposed project. The list included a total of 27 tribal representatives from 23 Native American tribes.

On May 14, 2020, the City mailed AB 52 notification letters via certified mail to tribal representatives identified by the NAHC, as follows:

- Agua Caliente Band of Cahuilla Indians, Jeff Grubbe, Chairperson
- Augustine Band of Cahuilla Indians, Amanda Vance, Chairperson
- Cabazon Band of Mission Indians, Doug Welmas, Chairperson
- Cahuilla Band of Indians, Daniel Salgado, Chairperson
- Campo Band of Diegueno Mission Indians, Ralph Goff, Chairperson
- Ewiiapaayp Band of Kumeyaay Indians, Michael Garcia, Vice Chairperson
- Ewiiapaayp Band of Kumeyaay Indians, Robert Pinto, Chairperson
- Jamul Indian Village, Erica Pinto, Chairperson
- Jamul Indian Village, Lisa Cumper, THPO
- La Posta Band of Diegueno Mission Indians, Javaughn Miller, Tribal Administrator
- Los Coyotes Band of Mission Indians, Shane Chapparosa, Chairperson
- Manzanita Band of Kumeyaay Nation, Angela Elliott Santos, Chairperson
- Mesa Grande Band of Diegueno Mission Indians, Micheal Linton, Chairperson
- Morongo Band of Mission Indians, Robert Martin, Chairperson
- Quechan Tribe of Fort Yuma Reservation, Jill McCormick, Historic Preservation Officer
- Ramona Band of Cahuilla Mission Indians, Joseph Hamilton, Chairperson
- San Fernando Band of Mission Indians, Donna Yocum, Chairperson
- San Manuel Band of Mission Indians, Jessica Mauck, Director of Cultural Resources
- Santa Rosa Band of Mission Indians, Steven Estrada, Chairperson
- Serrano Nation of Mission Indians, Wayne Walker, Co-Chairperson
- Serrano Nation of Mission Indians, Mark Cochrane, Co-Chairperson
- Soboba Band of Luiseno Indians, Scott Cozart, Chairperson
- Sycuan Band of the Kumeyaay Nation, Cody Martinez, Chairperson
- Torres-Martinez Desert Cahuilla Indians, Thomas Torte, Chairperson
- Twenty-Nine Palms Band of Mission Indians, Darrell Mike, Chairperson
- Viejas Band of Kumeyaay Indians, John Christman, Chairperson

During the 30-day response period, the City received responses from four tribes: the San Manuel Band of Mission Indians, Cabazon Band of Mission Indians, Quechan Tribe of Fort Yuma Reservation and Soboba Band of Luiseno Indians. The Soboba Band of Luiseno Indians responded on June 11, 2020, requesting formal consultation with the City. The response letter did not indicate presence of TCRs within the project site, but included a request a consultation meeting with the City. The other three responding tribes declined formal AB 52 consultation.

3.18.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVIII. TRIBAL CULTURAL RESOURCES</b>				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:*

i) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

**Less Than Significant Impact with Mitigation Incorporated.** As discussed in Section 3.5, Cultural Resources, Response 3.5(b), the records search indicates that 38 previously recorded cultural resources were located within the 1-mile study area buffer, but no resources have been identified within or near the project site. Nonetheless, there is potential for inadvertent discovery of TCRs during ground-disturbing construction activities. **MM-CUL-1** would be implemented during construction in the event of an inadvertent discovery of archaeological resources to allow for assessment and evaluation of the resources. Furthermore, **MM-CUL-2** contains protocol to be implemented should construction activities uncover human remains. As such, impacts to TCRs eligible for listing in the California Register of Historic Places (CRHR) would be less than significant with mitigation incorporated.

- ii) ***A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?***

**Less Than Significant Impact with Mitigation Incorporated.** No known TCRs have been identified in the project site through previous archeological investigations, site reconnaissance or in consultation with affiliated tribes identified in the NAHC SFL. The City is currently undergoing government-to-government consultation with the Soboba Band of Luiseno Indians, pursuant to AB 52. During the formal consultation process, the Soboba tribal representative has made recommendations to incorporate mitigation that would ultimately reduce the potential to impact subsurface archaeological resources and TCRs. As such, as discussed in Section 3.5.2, with the implementation of **MM-CUL-1 through MM-CUL-5**, impacts associated with TCRs would be less than significant.

### 3.18.3 Mitigation Measures

Implementation of **MM-CUL-1** through **M-CUL-5**, included in their entirety in Section 3.5.3, would reduce potential impacts to TCRs.

## 3.19 Utilities and Service Systems

### 3.19.1 Environmental Setting

#### **Domestic Water**

Domestic water for project site is provided by Mission Springs Water District (MSWD). MSWD's water supply source is 100 percent groundwater produced from MSWD-owned and operated wells. The District provides water service to approximately 37,600 people in their water service area (MSWD 2016). MSWD maintains approximately 276 miles of water lines, 20 reservoir sites, and 24 pumps sites within 10 pressure zones (MSWD 2017). Annually, MSWD produces approximately 9,000 acre-feet of water for their service area of 135 square miles (MSWD 2017).

#### **Wastewater**

Sanitary sewer collection and treatment facilities for the project site are provided by MSWD. MSWD maintains approximately 89 miles of sewer lines within the service area of approximately 135 square miles (MSWD 2017). The District operates two separate wastewater treatment plants, which currently treat approximately 2.3 million gallons per day.

#### **Solid Waste**

The City has a franchise agreement with Desert Valley Disposal Inc. (DVD) for the provision of complete residential, commercial and roll-off trash disposal. Additional services include electronic waste pick-up, construction debris removal and paper shredding services for commercial and industrial businesses.

3.19.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:</b>				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

**Water**

**Less Than Significant Impact.** The MSWD total water demand in 2020 is projected to be 9,550 acre-feet per year (AFY) (MSWD 2016). The MSWD 2015 UWMP assumes a portion of the water supply, starting in 2020 would be from recycled water, but no infrastructure has been established to-date that can treat and distribute recycled water to allowable land uses, such as landscaping.

Landscape water demand for the project is based on the estimated landscape irrigation area and water usage equations of the MSWD Water Efficient Landscaping Guidelines (MSWD 2009). The overall purpose of the guidelines is to establish effective water efficient landscape requirements for newly installed and rehabilitated landscapes. The estimated landscape water demand for the proposed project would be 0.018 million gallons per day (mgd). Water demand associated with the on-site restrooms (2 stalls) and water fountains in common areas would result in a negligible increase to the landscape water demand. As such,

the total water demand for the proposed project would be 0.018 mgd (20 AFY). The total estimated water demand for the proposed project would increase the City's total annual water demand by 0.002 percent. As such, the proposed project would not result in a substantial increase in water demand that would require construction of new water infrastructure.

Approximately one third of the project site is currently developed as the City's Corporate Yard and animal shelter. The remaining two thirds of the project site is vacant, disturbed land. Existing water infrastructure is present along Hacienda Avenue, Cholla Drive and Flora Avenue. The proposed project would connect to the existing sewer lines adjacent to the project site, and would not require expansion of the existing water lines to serve the project site.

### **Sewer**

**Less Than Significant Impact.** MSWD provides wastewater collection services to the project site. MSWD's existing wastewater system consists of approximately 89 miles of sewer line, concentrated in the central portion of the City where development is most dense. Existing sewer lines west of West Drive, where the project is located, were installed in the 1980s (MSWD 2016). Existing sewer infrastructure is present along Hacienda Avenue, Cholla Drive and Flora Avenue, adjacent to the project site. The proposed project would connect to the existing sewer lines adjacent to the project site, and would not require expansion of the existing sewer lines to serve the project site.

- b) ***Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?***

**Less Than Significant Impact.** MSWD provides domestic water and wastewater service to the project site. MSWD's water supply source is 100 percent groundwater produced from MSWD-owned and operated wells that draw from the Mission Creek Subbasin. The Mission Creek Subbasin is considered an unconfined aquifer with a saturated thickness of 1,200 feet or more and an estimated total storage capacity on the order of 2.6 million acre-feet. The subbasin is naturally recharged by surface and subsurface flow from the Mission Creek, Dry, and Big Morongo Washes, the Painted Hills, and surrounding mountain drainages (MSWD 2016).

The Mission Creek Subbasin is currently in overdraft condition (MSWD 2016). Groundwater overdraft within the Mission Creek Subbasin (excluding artificial recharge) is now estimated to have averaged up to 9,000 AFY. Due to continuing overdraft conditions in the Mission Creek Subbasin, Coachella Valley Water District (CVWD) and Desert Water Authority (DWA) began constructing facilities to replenish the Mission Creek Subbasin in October 2001. The current replenishment program is effectively increasing water levels and is expected to stabilize or reverse the water level decline. As required by the policies of the General Plan, the City will continue to cooperate with MSWD and other agencies/jurisdictions in implementing a groundwater replenishment program capable of ensuring the viability of the Mission Creek subbasin.

Because the current replenishment programs for the Mission Creek Subbasin seem to be increasing water levels, there are sufficient supplies available for mission springs to continue pumping groundwater to support its services area. As described in 3.19.2(a), the proposed project would result in an increase the City's total annual water demand by 0.002 percent. As such, the proposed project would not result in a substantial increase in water demand that would exceed MSWD's water supply.

- c) ***Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?***

**Less Than Significant Impact.** MSWD operates two wastewater treatment plants (WWTP). The Horton WWTP, located on Verbena Drive approximately 1.2 miles southeast of the project site, has a capacity of 2.3 million gallons per day (mgd) (2,800 AFY). The average daily flow metered to the plant in 2015 was 1.69 mgd (1,893 AFY). The Desert Crest WWTP is located about 4 miles southeast of the project site, has a capacity of 0.18 mgd (202 AFY) and serves a country club development and mobile home park. The average daily flow to the Desert Crest WWTP in 2015 was metered at 0.04 mgd (45 AFY). The 2015 wastewater demand used approximately 70 percent of MSWD's existing WWTP capacity. In addition, MSWD approved the West Valley Water Reclamation Program in August 2019. The first phase of the WVWRP would be developed over a period up to 10 years with a maximum design capacity of 1.5 mgd.

The wastewater demand for the Corporate Yard is assumed to remain unchanged. The proposed park would result in minimal wastewater demand associated with the restroom facility within two toilets and sinks, and water fountains in common areas. Irrigation water would be conveyed to on-site stormwater infrastructure, where it would infiltrate the soil and return to the groundwater table. As such, the proposed project would not result substantially increase the total MSWD wastewater demand, and MSWD would have adequate capacity to serve the project site.

- d) ***Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?***

**Less Than Significant Impact.** Solid waste disposal and recycling services for the City are provided by Desert Valley Disposal (DVD). Solid waste and green waste collected from the project site would be hauled to the Edom Hill Transfer Station. Waste from this transfer station would then be sent to a permitted landfill or recycling facility outside of the Coachella Valley. These include Badlands Disposal Site, El Sobrante Sanitary Landfill, and/or Lamb Canyon Disposal Site. Data indicates that these landfills have approximately 25, 50, and 95 percent of their remaining design capacity, respectively (EPA 2019).

As described further in Section 3.14, Population and Housing, the proposed project includes implementation of a park use that would not result in any increase in population or employment. Although the proposed project would result in an increase in visitors to the site, any increase in solid waste associated with on-site users of the park, such as trash and rubbish from park users, is anticipated to be nominal and within the existing service capacity of the DVD, which currently serves the project area.

- e) ***Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?***

**Less Than Significant Impact.** The California Integrated Waste Management Act (AB 939) changed the focus of solid waste management from landfill to diversion strategies (e.g., source reduction, recycling, and composting). The purpose of the diversion strategies is to reduce dependence on landfills for solid waste disposal. AB 939 established mandatory diversion goals of 25 percent by 1995 and 50 percent by 2000. DVD services include both typical solid waste and green waste generated at the project site (cardboard, paper waste, food waste, etc.) that can be transferred to Edom Hill Transfer Station.

In an effort to reduce the amount of solid waste that would ultimately end up in a county landfill, DVD provides a resource recovery/recycling service that includes provision of a container for the separation of

cans, glass and newsprint for weekly pick up. Each development within the DLVSP would be supplied with a container for recyclable items that is separate from the solid waste container. This program is in conformance with AB 939.

### 3.19.3 Mitigation Measures

No mitigation measures are required.

## 3.20 Wildfire

### 3.20.1 Environmental Setting

The California Department of Forestry and Fire Protection (CAL FIRE) classifies land in California based on fire hazard severity. An area that is not located within a state responsibility area (SRA) is designated as either a local responsibility area (LRA) or federal responsibility area (FRA) for fire protection. The project is designated as a LRA. The entire project site is classified as non-very high fire hazard severity zone (Non-VHFHSZ) (CAL FIRE 2009).

### 3.20.2 Impact Analysis

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XX. WILDFIRE</b> – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) ***Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?***

**No Impact.** The project site is not located within or near SRAs or land classified as a Very High Fire Hazards Severity Zone (CAL FIRE 2009). In addition, as discussed in Section 3.9, Hazards and Hazardous Materials, the proposed project does not include any characteristics (e.g., temporary or permanent road closures or the long-term blocking of road access) that would physically impair or otherwise conflict with an adopted emergency response plan or emergency evacuation plan.

b) ***Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?***

**No Impact.** The project site is not located within or near SRAs or land classified as a Very High Fire Hazards Severity Zone (CAL FIRE 2009).

c) ***Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?***

**No Impact.** The project site is not located within or near SRAs or land classified as a Very High Fire Hazards Severity Zone (CAL FIRE 2009).

d) ***Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?***

**No Impact.** The project site is not located within or near SRAs or land classified as a Very High Fire Hazards Severity Zone (CAL FIRE 2009). In addition, As previously discussed in Section 3.7, Geology and Soils, landslides or other forms of natural slope instability do not represent a significant hazard to the project because the project site is located in a relatively flat area.

### 3.20.3 Mitigation Measures

No mitigation measures are required.

### 3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XXI. MANDATORY FINDINGS OF SIGNIFICANCE</b>				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

**Biological Related - Less Than Significant with Mitigation Incorporated.** As described in Section 3.4.2(a), the proposed project has potential for impacts to special-status plants and wildlife. Project implementation has potential to impact USFWS-designated critical habitat for Coachella Valley milk vetch. As a Covered Activity under the CVMSHC, “take” of Covered species (including Coachella Valley milk vetch) would be authorized with payment of the CVMSHCP mitigation fee. Potential impacts to nesting birds within shrubs, ornamental trees and bare ground near the project site would be avoided through implementation of **MM BIO-1**. Potential impacts to burrowing owl nesting habitat within debris piles within the project site would be avoided through implementation of **MM BIO-2**.

**Cultural/Historic Related - Less Than Significant Impact with Mitigation Incorporated.** The proposed project’s potential to degrade, threaten, or otherwise eliminate important historical or archaeological resources is analyzed in Section 3.5, Cultural Resources, and Section 3.18, Tribal Cultural Resources. The

EIC records search did not identify any historic resources that could be impacted by the proposed project. The EIC records search identified 39 previously recorded cultural resources within the 1-mile project site buffer area, No known cultural resources were identified within or near the project site. Despite the low probability of encountering archaeological deposits, inadvertent discoveries are possible during ground-disturbing activities. During tribal outreach by the City, the Soboba Band of Luiseno Indians requested formal tribal consultation pursuant to AB 52 because the project site is within an area with an increased likelihood for presence of TCRs. During the formal consultation process, the Soboba tribal representative has made recommendations to incorporate mitigation that would ultimately reduce the potential to impact subsurface archaeological resources and TCRs. As such, as discussed in Section 3.5.2 and Section 3.18.2, with the implementation of **MM-CUL-1 through MM-CUL-5**, impacts associated with unknown subsurface archaeological resources and TCRs would be less than significant.

- b) ***Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?***

**Less Than Significant Impact with Mitigation Incorporated.** As analyzed throughout Section 3, the proposed project would result in less than significant impacts or no impact to aesthetics, agriculture and forestry resources, air quality, energy, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, public services, recreation, transportation, utilities and service systems, and wildfire. Mitigation would be required to reduce potentially significant impacts related to biological resources, cultural resources, geology and soils (including paleontological resources), noise, and TCRs.

- c) ***Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?***

**Less Than Significant Impact.** Direct and indirect environmental effects on human beings were analyzed in the following sections: aesthetics, air quality, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, and transportation. As found in the discussion for each relevant section, all potential impacts to human beings would be less than significant or result in no impact except Noise. **MM-NOI-1** includes measures to reduce noise generated during construction activities, thus reducing potential noise impacts to nearby residents.

The proposed project would comply with all applicable federal, state, and local policies and regulations. For example, the construction contractor would comply with the SWRCB Construction General Permit to avoid water quality impacts. As such, the proposed project would not result in environmental effects that will cause substantial adverse effects on human beings.

 LIGHT FIXTURE TYPE 'SA'

### LUMINIS EC802/EC803 SERIES ECLIPSE MAXI - LED 8" Pole/Wall mount

TYPE: \_\_\_\_\_ QUANTITY: \_\_\_\_\_ PROJECT: \_\_\_\_\_

CATALOG NUMBER: \_\_\_\_\_

FIXTURE	WATTAGE	VOLTAGE	FINISH	OPTION	OPTION	OPTION	OPTION

- Heavy cast aluminum top cover with integral LED heat dissipating pad.
- 30" dia. x .090" (2.3) thick hard aluminum top shade. Underside surface is painted white enamel to optimize light performance (EC803 only).
- Set of three aluminum louvers.
- Set of 4 X 1/2" (3) solid aluminum struts.
- Cast aluminum upper electrical housing.
- Cast aluminum lower electrical housing.

**EC802**  
**EC803**

**MATERIALS**  
Eclipse is made of corrosion resistant 356 aluminum alloy with a copper (CU) content of less than 0.1%.  
The lower cast aluminum housing fits with a 4" (102) or 5" (127) pole and contains all electrical controls on a removable tray.

**CERTIFICATION**  
Tested to UL1998 and CSA 22.2 #250 ETL listed wet location.  
Photometric testing performed by an independent laboratory in accordance with IES LM-79-08 standards at 25°C. Lumen depreciation in accordance with IESNA LM80 standards. CE certification on request.  
Rated IP65.

**ELECTRICAL**  
**LED DRIVER**  
Standard driver is 0-10V dimming-ready (dims to 10%) with 120-277 multi-volt compatibility (50-60Hz), optional 347V on request, minimum operating temperature of -30°C/-22°F, output over voltage protection, output over current protection, output short circuit protection with auto-recovery, and over temperature protection (110°C).

**LED**  
Type II, III or V light distribution via high performance optical lenses. Standard 4000K/90CRI. Optional 2700K, 3000K and 3500K. Removable modular LED platform.  
Optional Amber LED for turtle sensitive areas.  
Wavelengths: 584.5nm to 597nm.

**LIFE**  
75,000hrs L<sub>70</sub>B<sub>50</sub> (based on IESNA TM-21 Test Method and LM-80 data).  
145,000hrs L<sub>70</sub>B<sub>50</sub> (calculated projection from LM-80 data).

**FINISH**  
Five-stage preparation process including preheating of cast aluminum parts for air extraction, and an environmentally friendly alloy sealant. Polyester powder coating is applied through an electrostatic process and oven cured for long term finish.

**MOUNTING**  
Maximum weight: 29lbs (13kg).  
Eclipse is designed for ease of access and installation. Standard luminaire mounts on a 4" (102) or 5" (127) pole. Alternate pole or wall attachments are proposed with high quality components to meet multiple installation conditions.

 LIGHT FIXTURE TYPE 'SB'

### Datasheet: OSQ Area Luminaire on Light-Structure System™ Pole

**Luminaire Data**  
Manufacturer ..... Cree, Inc.  
Material and finish ..... Die-cast aluminum with silver powder-coat finish<sup>1</sup>  
Mounting ..... Direct mount arm to Musco auxiliary bracket  
Pole attachment ..... Auxiliary bracket mount  
Weight (luminaire) ..... 26.5 lb (12 kg)

**Regulatory and Voluntary Qualifications**  
UL ..... cULus Listed  
Environment ..... Suitable for wet locations  
Ingress Protection ..... IP66  
Emissions ..... Meets FCC Part 15, Subpart B, Class A standards for conducted and radiated emissions  
RoHS ..... Compliant

**Photometric Characteristics**  
Lumen maintenance factor<sup>2</sup>  
25k hours<sup>3</sup> ..... 0.96  
50k hours<sup>3</sup> ..... 0.92  
75k hours<sup>3</sup> ..... 0.88  
100k hours<sup>3</sup> ..... 0.84  
CIE correlated color temperature ..... 5700 K  
Color Rendering Index (CRI), minimum ..... 70  
Lumens ..... 17,000

**Footnotes:**  
1) Cree's exclusive Colorfast DeltaGuard® finish features an E-coat epoxy primer with an ultra-durable powder topcoat, providing excellent resistance to corrosion, ultraviolet degradation, and abrasion.  
2) Lumen maintenance values at 25°C ambient temperature are calculated per TM-21 based on LM-80 data and in-situ luminaire testing.  
3) Values are represented as projected values within six times limit of tested hours per IES TM-21-11.  
4) Values are represented as calculated values due to exceeding six times limit of tested hours.

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
<i>Abronia villosa</i> var. <i>aurita</i>	chaparral sand-verbena	None/None/1B.1	None	Chaparral, Coastal scrub, Desert dunes; sandy/annual herb/(Jan)Mar-Sep/245-5250	Not expected to occur. No suitable vegetation (i.e., chaparral, coastal scrub or desert dunes) is present to support this species.
<i>Ambrosia monogyra</i>	singlewhorl burrobrush	None/None/2B.2	None	Chaparral, Sonoran desert scrub; sandy/perennial shrub/Aug-Nov/30-1640	Not expected to occur. A minimal amount of desert scrub is present; however, conspicuous perennial shrub likely to have been detected during the 2019 site visit. The nearest known occurrence is approximately 10 miles south of the study area (CDFW 2019).
<i>Astragalus bernardinus</i>	San Bernardino milk-vetch	None/None/1B.2	None	Joshua tree woodland, Pinyon and juniper woodland; Often granitic or carbonate/perennial herb/Apr-June/2950-6560	Not expected to occur. The study area is outside of the species' known elevation range and there is no suitable vegetation or soils present.
<i>Astragalus lentiginosus</i> var. <i>coachellae</i>	Coachella Valley milk-vetch	FE/None/1B.2	Covered	Desert dunes, Sonoran desert scrub (sandy)/annual / perennial herb/Feb-May/130-2150	Not expected to occur. This species occur in dunes and sandy flats, along the disturbed margins of sandy washes and sand dunes. The study area lacks suitable sandy soils (i.e., soils on-site are compacted) and lacks washes where the species is known to occur. While there are numerous known occurrences less than one mile south of the study area, these occur along Morongo Wash (CDFW 2019).

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
<i>Astragalus sabulorum</i>	gravel milk-vetch	None/None/2B.2	None	Desert dunes, Mojavean desert scrub, Sonoran desert scrub; Usually sandy, sometimes gravelly. Flats, washes, and roadsides/annual / perennial herb/Feb–June/-195–3050	Low potential to occur. There is a minimal amount of a desert scrub present; however, the study area lacks washes. Furthermore, the nearest known occurrence is from 1906 and is approximately 22 miles southeast of the study area (CDFW 2019).
<i>Astragalus tricarinatus</i>	triple-ribbed milk-vetch	FE/None/1B.2	Covered	Joshua tree woodland, Sonoran desert scrub; sandy or gravelly/perennial herb/Feb–May/1475–3905	Not expected to occur. The study area is outside of the species' known elevation range.
<i>Ayenia compacta</i>	California ayenia	None/None/2B.3	None	Mojavean desert scrub, Sonoran desert scrub; rocky/perennial herb/Mar–Apr/490–3595	Not expected to occur. A minimal amount of desert scrub is present; however, the study area lacks suitable rocky habitats to support this species. This species occurs in rocky canyons and the nearest known occurrence is from 1922 and is approximately 10.6 miles south of the study area within Tahquitz Canyon (CDFW 2019).
<i>Chylismia arenaria</i>	sand evening-primrose	None/None/2B.2	None	Sonoran desert scrub (sandy or rocky)/annual / perennial herb/Nov–May/-225–3000	Low potential to occur. The study area is located within the species' known elevation range and there is a minimal amount of desert scrub present; however, the nearest known occurrence is from 1924 and is approximately 40 miles southeast of the study area at the Salton Sea near Oasis (CDFW 2019).

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
<i>Cladium californicum</i>	California sawgrass	None/None/2B.2	None	Meadows and seeps, Marshes and swamps Alkaline or Freshwater/perennial rhizomatous herb/June-Sep/195-5250	Not expected to occur. No suitable vegetation (i.e., meadows and seeps, marshes and swamps) is present to support this species.
<i>Jaffuelobryum wrightii</i>	Wright?s jaffuelobryum moss	None/None/2B.3	None	Alpine dwarf scrub, Mojavean desert scrub, Pinyon and juniper woodland; Dry openings, rock crevices, carbonate/moss/N.A./520-8200	Not expected to occur. The study area is located within the species' known elevation range and there is a minimal amount of desert scrub present; however, the study area lacks rock crevices and carbonate soils to support this species.
<i>Matelea parvifolia</i>	spearleaf	None/None/2B.3	None	Mojavean desert scrub, Sonoran desert scrub; rocky/perennial herb/Mar-May(July)/1440-3595	Not expected to occur. The study area is outside of the species' known elevation range.
<i>Mentzelia tricuspis</i>	spiny-hair blazing star	None/None/2B.1	None	Mojavean desert scrub; sandy, gravelly, slopes, and washes/annual herb/Mar-May/490-4200	Not expected to occur. The study area is located within the species' known elevation range and there is a minimal amount of desert scrub present; however, the study area lacks suitable gravelly, slopes, and washes to support this species. The nearest known occurrence is within the Whitewater River approximately 6.6 miles west of the study area (CDFW 2019).
<i>Mentzelia tridentata</i>	creamy blazing star	None/None/1B.3	None	Mojavean desert scrub; rocky, gravelly, sandy/annual herb/Mar-May/2295-3855	Not expected to occur. The study area is outside of the species' known elevation range.

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
<i>Nemacaulis denudata</i> var. <i>gracilis</i>	slender cottonheads	None/None/2B.2	None	Coastal dunes, Desert dunes, Sonoran desert scrub/annual herb/(Mar)Apr–May/-160–1310	Low potential to occur. The study area is located within the species' known elevation range; however, there is a minimal amount of desert scrub present and the nearest known occurrence is from 1948 and is approximately 5.5 miles southwest of the study area (CDFW 2019).
<i>Petalonyx linearis</i>	narrow-leaf sandpaper-plant	None/None/2B.3	None	Mojavean desert scrub, Sonoran desert scrub; Sandy or rocky canyons/perennial shrub/(Jan–Feb)Mar–May(June–Dec)/-80–3660	Not expected to occur. The study area is located within the species' known elevation range; however, there is a minimal amount of desert scrub present and the study area lacks rocky canyons to support this species. The nearest known occurrence is from 1879 and is approximately 11.3 miles west of the study area within the San Gorgonio Pass (CDFW 2019).
<i>Saltugilia latimeri</i>	Latimer's woodland-gilia	None/None/1B.2	None	Chaparral, Mojavean desert scrub, Pinyon and juniper woodland; rocky or sandy, often granitic, sometimes washes/annual herb/Mar–June/1310–6235	Not expected to occur. The study area is outside of the species' known elevation range.

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
<i>Salvia greatae</i>	Orocopia sage	None/None/1B.3	Covered	Mojavean desert scrub, Sonoran desert scrub/perennial evergreen shrub/Mar-Apr/-130-2705	Not expected to occur. The study area is located within the species' known elevation range; however, there a minimal amount of desert scrub present and this conspicuous perennial evergreen shrub would likely to have been detected during the 2019 site visit. The nearest known occurrence is approximately 42 miles southeast of the study area (CDFW 2019).
<i>Senna covesii</i>	Coves' cassia	None/None/2B.2	None	Sonoran desert scrub; Dry, sandy desert washes and slopes/perennial herb/Mar-June(Aug)/735-4250	Not expected to occur. The study area is located within the species' known elevation range; however, there a minimal amount of desert scrub present and the study area lacks suitable desert washes and slopes to support this species. The nearest known occurrence is approximately 23 miles south of the study area (CDFW 2019).
<i>Wislizenia refracta</i> ssp. palmeri	Palmer's jackass clover	None/None/2B.2	None	Chenopod scrub, Desert dunes, Sonoran desert scrub, Sonoran thorn woodland/perennial deciduous shrub/Jan-Dec/0-985	Not expected to occur. The study area is located slightly above the species' known elevation range. Conspicuous perennial deciduous shrub likely to have been detected during the 2019 site visit. The nearest known occurrence is approximately 42 miles south of the study area (CDFW 2019).

B.2: SPECIAL-STATUS PLANT SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State/CRPR)	CVMSHCP	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Wislizenia refracta ssp. refracta	jackass-clover	None/None/2B.2	None	Desert dunes, Mojavean desert scrub, Playas, Sonoran desert scrub/annual herb/Apr–Nov/1965–2625	Not expected to occur. The study area is outside of the species' known elevation range.
Xylorhiza cognata	Mecca-aster	None/None/1B.2	Covered	Sonoran desert scrub/perennial herb/Jan–June/65–1310	Not expected to occur. The study area is located within the species' known elevation range; however, there a minimal amount of desert scrub present and the study area lacks suitable slopes and canyons to support this species. The nearest known native/natural occurrence is approximately 17.7 miles southeast of the study area (CDFW 2019).

**Federal**

FE: Federally listed as endangered

FT: Federally listed as threatened

**State**

SE: State listed as endangered

SR: State listed as rare

**CRPR: California Rare Plant Rank**

1A: Plants presumed extirpated in California and either rare or extinct elsewhere

1B: Plants rare, threatened, or endangered in California and elsewhere

2B: Plants rare, threatened, or endangered in California, but more common elsewhere

4: Plants of Limited Distribution – A Watch List

**Threat Rank**

0.1 – Seriously threatened in California (more than 80% of occurrences threatened/high degree and immediacy of threat)

0.2 – Moderately threatened in California (20%–80% occurrences threatened/moderate degree and immediacy of threat)

0.3 – Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

**CVMSHCP:** Coachella Valley Multiple Species Habitat Conservation Plan

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Amphibians</i>					
Rana draytonii	California red-legged frog	FT/SSC	None	Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water; uses adjacent uplands	Not expected to occur. No suitable aquatic resources are present to support this species.
Rana muscosa	mountain yellow-legged frog	FE/SE, WL	None	Lakes, ponds, meadow streams, isolated pools, and open riverbanks; rocky canyons in narrow canyons and in chaparral	Not expected to occur. No suitable aquatic resources are present to support this species.
<i>Reptiles</i>					
Anniella stebbinsi	southern California legless lizard	None/SSC	None	Coastal dunes, stabilized dunes, beaches, dry washes, valley-foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and moist sandy or loose, loamy soils	Not expected to occur. Although there is a minimal amount of creosote bush present that can potentially serve as suitable habitat, the study area soils are highly compacted and lack the loose loamy soils that this species generally prefers.
Arizona elegans occidentalis	California glossy snake	None/SSC	None	Commonly occurs in desert regions throughout southern California. Prefers open sandy areas with scattered brush. Also found in rocky areas.	Low potential to occur. There are some open marginal sandy areas with limited scattered creosote brush; however, the soils are highly compacted and disturbed. Additionally, the study area is isolated because of surrounding development.
Charina umbratica	southern rubber boa	None/ST	None	Montane oak-conifer and mixed-conifer forests, montane chaparral, wet meadows; usually in vicinity of streams or wet meadows	Not expected to occur. The study area is outside the species' known range in the San Jacinto and San Bernardino Ranges, and suitable habitat is absent. The nearest CNDDDB occurrence is approximately 14.5 miles southwest of the project site.
Crotalus ruber	red diamond rattlesnake	None/SSC	None	Coastal scrub, chaparral, oak and pine woodlands, rocky grasslands, cultivated areas, and desert flats	Low potential to occur. The project footprint generally consists of disturbed and developed habitat with sparse creosote brush. The nearest CNDDDB occurrence is approximately 1.7 miles southeast of the project site.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Gopherus agassizii</i>	Mojave desert tortoise	FT/ST	Covered	Arid and semi-arid habitats in Mojave and Sonoran Deserts, including sandy or gravelly locations along riverbanks, washes, sandy dunes, canyon bottoms, desert oases, rocky hillsides, creosote flats, and hillsides	Not expected to occur. Although there is marginal suitable habitat (sparse creosote bush), the soils have been compacted; surrounding areas are highly disturbed and surrounded by ornamental vegetation and development. The nearest CNDDDB occurrence is approximately 4.1 miles east of the study area (CDFW 2019).
<i>Phrynosoma blainvillii</i>	Blainville's horned lizard	None/SSC	None	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley-foothill hardwood, conifer, riparian, pine-cypress, juniper, and annual grassland habitats	Low potential to occur. There are some open marginal sandy areas with limited scattered creosote brush; however, the soils are highly compacted and disturbed. Additionally, the study area is at the edge of the species range and isolated from suitable habitat due to surrounding development.
<i>Phrynosoma mcallii</i>	flat-tailed horned lizard	None/SSC	Covered	Desert washes and flats with sparse low-diversity vegetation cover and sandy soils	Not expected to occur. The study area lacks suitable sandy soils; the soils present are highly compacted. Additionally, the study area is isolated because of surrounding development. The nearest CNDDDB occurrence is approximately 4.8 miles southwest from the study area (CDFW 2019).
<i>Thamnophis hammondii</i>	two-striped gartersnake	None/SSC	None	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. The study area lacks suitable habitat to support this species.
<i>Uma inornata</i>	Coachella fringe-toed lizard	FT/SE	Covered	Sand dunes in sparse desert scrub, alkali scrub, and desert wash	Not expected to occur. Although the nearest CNDDDB occurrence is approximately 0.7 miles south of the project site, this site lacks the suitable habitat (i.e., sand dunes, desert wash) needed for this species to occur.
<i>Birds</i>					
<i>Aquila chrysaetos</i> (nesting & wintering)	golden eagle	BCC/FP, WL	None	Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats	Not expected to nest or forage; however, species may fly over the site. There is no suitable nesting habitat present. Additionally, the adjacent areas are developed and highly disturbed which limits the potential for this species to occur.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Asio otus</i> (nesting)	long-eared owl	None/SSC	None	Nests in riparian habitat, live oak thickets, other dense stands of trees, edges of coniferous forest; forages in nearby open habitats	Not expected to nest or forage. The study area lacks dense stands of trees and species is unlikely to forage over a small parcel in an otherwise developed area.
<i>Athene cunicularia</i> (burrow sites & some wintering sites)	burrowing owl	BCC/SSC	Covered	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Moderate potential to occur. There are some debris piles that can potentially serve as refuge for this species; however, no burrows were observed during the site visit and there are urbanized/developed areas within the site. The nearest CNDDDB occurrence is 0.2 miles away in 2005 (CDFW 2019).
<i>Cypseloides niger</i> (nesting)	black swift	BCC/SSC	None	Nests in moist crevices, caves, and cliffs behind or adjacent to waterfalls in deep canyons; forages over a wide range of habitats	Not expected to occur. There are no nearby waterfalls, moist crevices, caves, or cliffs suitable for nesting.
<i>Icteria virens</i> (nesting)	yellow-breasted chat	None/SSC	Covered	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Not expected to occur. Suitable habitat (i.e., riparian woodlands, willows, or vine tangles) is absent.
<i>Lanius ludovicianus</i> (nesting)	loggerhead shrike	BCC/SSC	None	Nests and forages in open habitats with scattered shrubs, trees, or other perches	Low potential to nest and forage. There is open habitat with scattered creosote shrubs present that can potentially serve as suitable habitat. However the shrubs are far in between and surrounded by development and ornamental plants.
<i>Piranga rubra</i> (nesting)	summer tanager	None/SSC	Covered	Nests and forages in mature desert riparian habitats dominated by cottonwoods and willows	Not expected to occur. Suitable habitat is absent.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Poliophtila californica californica</i>	coastal California gnatcatcher	FT/SSC	None	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Not expected to occur. The study area is outside the species' range.
<i>Pyrocephalus rubinus</i> (nesting)	vermilion flycatcher	None/SSC	None	Nests in riparian woodlands, riparian scrub, and freshwater marshes; typical desert riparian with cottonwood, willow, mesquite adjacent to irrigated fields, ditches, or pastures	Not expected to occur. There are no water resources available to create suitable habitat for this species (i.e., woodland and desert riparian scrub, marshes, or irrigated fields).
<i>Setophaga petechia</i> (nesting)	yellow warbler	BCC/SSC	Covered	Nests and forages in riparian and oak woodlands, montane chaparral, open ponderosa pine, and mixed-conifer habitats	Not expected to nest. Although this species likely occurs in migration, no riparian or other suitable vegetation for nesting occurs within the study area.
<i>Toxostoma crissale</i>	Crissal thrasher	None/SSC	Covered	Nests and forages in desert riparian and desert wash; dense thickets of sagebrush and other shrubs such as mesquite, iron catclaw acacia, and arrowweed willow within juniper and pinyon-juniper woodlands	Not expected to occur. The study area lacks the desert wash and scrub thickets this species requires. The nearest CNDDDB occurrence was in 1989 and approximately 8.7 miles south from the study area (CDFW 2019).
<i>Vireo bellii pusillus</i> (nesting)	least Bell's vireo	FE/SE	Covered	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. No suitable riparian vegetation present and the study area is located outside the known range of this subspecies.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Mammals</i>					
<i>Antrozous pallidus</i>	pallid bat	None/SSC	None	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in man-made structures and trees	Low potential to roost and forage. The developed and urbanized surrounding areas may provide suitable roosting habitat; however, no roosting habitat occurs on the study area and foraging habitat is marginal.
<i>Chaetodipus fallax pallidus</i>	pallid San Diego pocket mouse	None/SSC	None	Desert wash, desert scrub, desert succulent scrub, and pinyon-juniper woodland	Not expected to occur. The project footprint generally consists of disturbed and developed habitat with sparse creosote bush. Additionally, the study area is isolated because of surrounding development. The nearest CNDDDB occurrence is approximately 2.7 miles north of the study area.
<i>Corynorhinus townsendii</i>	Townsend's big-eared bat	None/SSC	None	Mesic habitats characterized by coniferous and deciduous forests and riparian habitat, but also xeric areas; roosts in limestone caves and lava tubes, man-made structures, and tunnels	Not expected to roost and forage. The study area lacks the riparian habitat, coniferous, and deciduous forests favored by this species. Additionally, the study area and immediate vicinity lack suitable roosting habitat.
<i>Glaucomys oregonensis californicus</i>	San Bernardino flying squirrel	None/SSC	None	Coniferous and deciduous forests, including riparian forests	Not expected to occur. The study area does not support coniferous, deciduous, or riparian forests.
<i>Lasiurus xanthinus</i>	western yellow bat	None/SSC	Covered	Valley-foothill riparian, desert riparian, desert wash, and palm oasis habitats; below 2,000 feet above mean sea level; roosts in riparian and palms	Not expected to occur. The study area lacks suitable riparian, desert wash, or palm oasis habitats.
<i>Neotoma lepida intermedia</i>	San Diego desert woodrat	None/SSC	None	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Not expected to occur. The scattered creosote scrub is isolated from suitable habitat due to surrounding development. The study area is likely at the very edge of the species' range or outside its range.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
<i>Nyctinomops femorosaccus</i>	pocketed free-tailed bat	None/SSC	None	Pinyon-juniper woodlands, desert scrub, desert succulent shrub, desert riparian, desert wash, alkali desert scrub, Joshua tree, and palm oases; roosts in high cliffs or rock outcrops with drop-offs, caverns, and buildings	Not expected to roost, low potential to forage. The scattered creosote scrub is isolated from suitable habitat due to surrounding development. Additionally, there are no cliffs, caverns or rocky outcrops for roosting. The nearest CNDDDB occurrence is 8.7 miles away.
<i>Nyctinomops macrotis</i>	big free-tailed bat	None/SSC	None	Rocky areas; roosts in caves, holes in trees, buildings, and crevices on cliffs and rocky outcrops; forages over water	Not expected to occur. The study area lacks rocky areas, caves, large trees, or cliffs for roosting, and the site is outside the species known range. Additionally there are no water resources for foraging. The nearest CNDDDB occurrence is approximately 20.8 miles east of the study area.
<i>Ovis canadensis nelsoni</i>	Nelson's bighorn sheep	None/FP	None	Steep slopes and cliffs, rough and rocky topography, sparse vegetation; also canyons, washes, and alluvial fans	Not expected to occur. The study area is located outside the rocky cliffs and steep slopes known to support this species. Additionally, the adjacent surrounding areas consist of urbanized and developed limiting the potential for this species to occur.
<i>Ovis canadensis nelsoni</i> pop. 2 DPS	Peninsular bighorn sheep DPS	FE/FP, ST	Covered	Dry, rocky, low-elevation desert slopes, canyons, and washes; females near water during lambing season	Not expected to occur. There are no rocky slopes, canyons, or washes present. Additionally, the adjacent surrounding areas are urbanized and developed. The nearest CNDDDB occurrence is approximately 12.6 miles away from the study area.
<i>Perognathus longimembris bangsi</i>	Palm Springs pocket mouse	None/SSC	Covered	Creosote scrub, desert scrub, and grasslands; sparse to moderately dense vegetative cover	Low potential to occur. There is sparse creosote scrub within the study area; however, the project footprint generally consists of disturbed and developed habitat. Additionally, the study area is isolated because of surrounding development. The nearest CNDDDB occurrence is approximately 3.7 miles away from the study area.
<i>Perognathus longimembris brevinasus</i>	Los Angeles pocket mouse	None/SSC	None	Lower-elevation grassland, alluvial sage scrub, and coastal scrub	Not expected to occur. The study area lacks suitable habitat to support this species and is located outside of the species' known range.
<i>Spermophilus (Xerospermophilus) tereticaudus chlorus</i>	Palm Springs round-tailed ground squirrel	None/SSC	Covered	Sandy arid regions of Lower Sonoran Life Zone including creosote bush scrub and creosote-palo verde	Low potential to occur. The study area supports a limited amount of creosote bush. However, the surrounding areas are urbanized and developed. The nearest CNDDDB occurrence is approximately 8.5 miles southwest from the study area.

B.3: SPECIAL-STATUS WILDLIFE SPECIES DETECTED OR POTENTIALLY OCCURRING IN THE STUDY AREA (CONTINUED)

Scientific Name	Common Name	Status (Federal/State)	CVMSHCP	Habitat	Potential to Occur
Taxidea taxus	American badger	None/SSC	None	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	Not expected to occur. Although the site is open, it is disturbed and surrounded by ornamental vegetation and development. Additionally, there were no burrows observed during the on-site visit that would indicate this species was present.
<i>Invertebrates</i>					
Dinacoma caseyi	Casey's June beetle	FE/None	None	Found only in two populations in a small area of southern Palm Springs	Not expected to occur. Suitable habitat absent. This species is only known to occur within Palm Springs within Whitewater River and Tahquitz Creek.

**Status Legend**

**Federal**

BCC: USFWS – Birds of Conservation Concern

# 1 Executive Summary

---

Dudek conducted a Phase I Environmental Site Assessment (ESA) for the property located at 65810 Hacienda Avenue in Desert Hot Springs, Riverside County, California (subject property) (Figure 1, Site Location). The subject property consists of approximately 10 acres of land located within five contiguous parcels. The Assessor Parcel Numbers (APNs) for the subject property include: 663-320-008, 663-320-009, 663-320-011, 663-320-020, and 663-320-014.

The findings of this investigation are based on historical aerial photographs, topographic maps, review of information contained in regulatory agency databases, available local agency records, interviews with site representatives, and a site reconnaissance.

Information gathered for this report indicated the following:

- The subject property was vacant, undeveloped land before 1953. The subject property was first developed as a corporate yard and animal shelter sometime after 1972 but before 1984.
- The subject property use has remained unchanged since it was first developed.
- Adjacent and nearby properties have included undeveloped land, residential housing, and a church.
- Two underground storage tanks were removed from the subject property in 2000. One soil sample collected from beneath a fuel dispenser contained petroleum hydrocarbons; subsequent drilling and sampling revealed no impacts and the case was closed with no further action required.
- Based on the documents reviewed, site inspection, and brief visual observation of neighboring properties, it is unlikely that adjacent or nearby properties have impacted the environmental conditions at the subject property.

This assessment revealed one controlled recognized environmental condition at the subject property; no evidence of recognized environmental conditions (REC) were identified in connection with the subject property.

Dudek performed this Phase I ESA of the subject property in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E1527-13. This report summarizes the research and findings of the Phase I ESA.

**Project Location**

DHS Corporate Yard Phase I

INTENTIONALLY LEFT BLANK

# 2 Introduction

---

This Phase I ESA was performed according to the guidelines stipulated in the ASTM Standard E 1527-13, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.” The subject property is located at 65810 Hacienda Avenue in Desert Hot Springs, Riverside County, California (Figure 1). The subject property consists of five contiguous parcels with APNs (APNs) 663-320-008, 663-320-009, 663-320-011, 663-320-020, and 663-320-014.

This Phase I ESA is being conducted for the City of Desert Hot Springs as part of the due diligence prior to the redevelopment of the subject property.

## 2.1 Assessment Procedure and Scope of Investigation

Phase I ESAs assist in identifying past and present land use, including identification of possible releases or disposal of manufacturing or other wastes if such information is contained within regulatory reports or files, and/or is currently visible on site. The assessment reviews local, county, state, and U.S. Environmental Protection Agency lists of known or potentially hazardous waste sites, landfills, and sites currently under investigation for environmental violations that may be of concern to a site.

The scope of this environmental investigation consisted of (1) a reconnaissance of the subject property; (2) a search of regulatory agency records; (3) review of available historical aerial photographs, topographic maps, Sanborn fire insurance maps, City Directory listings, and building department records; (4) an environmental lien search; (5) interview of a representative of the property owner; and (6) preparation of this Phase I ESA report detailing the findings of the investigation.

These activities were conducted to identify RECs. The term “recognized environmental condition” means the presence or likely presence of any hazardous substances or petroleum products on the subject property under conditions that indicate an existing release, a past release, or a material threat of a release into the ground, groundwater, or surface water.

The term “controlled recognized environmental condition” (controlled REC) is an environmental condition that would have been considered a REC in the past, but which has been remediated and received risk-based closure by a regulatory agency (i.e., no further action letter) where residual contamination remains in place. Furthermore, the term controlled REC is used if the property is subject to a control or use restriction (i.e., property use restrictions, activity and use limitations, institutional controls, or engineering controls) due to residual on-site contamination.

The term “historical recognized environmental condition” (historical REC) is an environmental condition that would have been considered a REC in the past, but which has been remediated and received unrestricted residential use closure by the regulatory agency. Therefore, no controls or use restrictions have been applied to the property.

The term “recognized environmental condition” is not intended to include *de minimis* conditions. *De minimis* conditions are conditions that generally do not present a material risk of harm to public health or the environment, and thus would not be the subject of an enforcement action if brought to the attention of governmental agencies.

## 2.2 Qualifications of Environmental Professionals

This Phase I ESA was prepared by Marcelo Azevedo, geologist, and Susan Smith, geologist. Qualifications for Ms. Smith, and Mr. Azevedo are presented in Appendix A.

I, Susan Smith, declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in Section 312.10 of 40 Code of Federal Regulations 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 Code of Federal Regulations Part 312.

# 3 Site Location

---

The subject property consists of approximately 10 acres of land located within five contiguous parcels of land (APNs 663-320-008, 663-320-009, 663-320-011, 663-320-020, and 663-320-014). The subject property is located at 65810 Hacienda Avenue in Desert Hot Springs, Riverside County, California (Figure 1). Approximately 1/3 of the subject property is developed as a Corporate Yard and animal shelter; the remaining 2/3 of the subject property consists of vacant, undeveloped land.

The subject property is accessed via a driveway located off of Hacienda Boulevard to the south. The subject property is bound to the west by Cholla Drive then residential housing, to the north by Flora Avenue then residential housing, to the south by Hacienda Avenue then residential housing, and to the west by an apartment complex and vacant, undeveloped land.

INTENTIONALLY LEFT BLANK

# 4 Environmental Setting

---

The subject property is located in the Coachella Valley Region of California and it is nestled between two mountain ranges – the San Bernardino and San Jacinto Mountains. The subject property is located in the Colorado Desert region of the Sonoran Desert. The Big Morongo Wash is located approximately 1 mile west of the subject property. The Big Morongo Canyon Preserve is located approximately 5 miles north of the subject property.

General topographic information for the subject property and the surrounding area was obtained from a review of topographic maps and from a site visit. The topography of the subject property is gently sloped towards the south-southeast (Appendix B, Historical Topographic Maps). The subject property is at an elevation of 1,028 feet above mean sea level.

No subsurface geologic investigations were performed as part of this Phase I ESA. According to the Environmental Data Resources (EDR) Report, the dominant soils in the vicinity of the subject property are mapped as the Carsitas unit which consists of a fine sand with very rapid infiltration rates.

Based on sources searched by EDR, one public water supply well was mapped within 1 mile of the subject property. Fourteen water wells were identified within a 1-mile radius of the subject property (Appendix C, Regulatory Database Search Report). The depth to water was not included for any of the wells identified in the EDR Report. According to the California Department of Water Resources Well Completion Report Map (DWR 2019), there are 12 well completion reports in the vicinity of the subject property (Township 02S; Range 04E; Sections 8, 16, 17, 23, 24, 25, 27, 30, 34 and 36) (Appendix D, Local Agency Records). The well completion reports were dated from 1949 to 2004 and the wells were designated for irrigation, domestic supply, industrial, and cathodic protection uses. Water levels ranged from 150 to 860 feet below ground surface. The information and drawings provided in the reports indicate that the wells depicted on the California Department of Water Resources Well Completion Report Map were not located on the subject property. Based on information from a site located approximately 1 mile southeast of the subject property, in 2010 the depth to groundwater ranged from 238 to 241 feet below ground surface with a gradient of 0.02 ft/ft toward the south-southeast. In addition, one monitoring well was observed on the subject property during the site reconnaissance; no additional information was provided for this well.

Dudek reviewed the California Division of Oil, Gas, and Geothermal Resources online database, which has information for known oil and gas wells in the state, for wells on or near the subject property (DOGGR 2019). According to this database there are 3 geothermal wells within one mile of the subject property. Two wells are located at approximately 1 mile to the northeast and one well located approximately 0.6 mile to the southeast of the subject property. There are no oil and gas wells on the subject property or within 1 mile of the subject property.

As per Federal Emergency Management Agency, National Flood Hazard Layer Viewer, the subject property is located within a minimum flood hazard zone. (FEMA 2019).

INTENTIONALLY LEFT BLANK

# 5 Interviews

---

## 5.1 Site Representative Interview

On August 14, 2019, Susan Smith of Dudek interviewed the representative of the subject property, Daniel Porras. Mr. Porras stated that the subject property is currently used as a city yard and animal shelter. Mr. Porras stated that prior to the aforementioned development that the subject property was vacant, undeveloped land. Mr. Porras stated that the use of the subject property has not changed since it was first developed.

Mr. Porras stated that new and used oil are stored in 55-gallon drums on the subject property. There are currently two aboveground storage tanks that are used to store unleaded gasoline and diesel fuel for city vehicles. Mr. Porras stated that two underground storage tanks were previously located on the subject property; the tanks were removed and the regulatory agency closed the case.

Mr. Porras stated that he is not aware of any environmental lawsuits, environmental liens, or activity and land use limitations related to environmental issues.

## 5.2 User-Provided Information

In accordance with ASTM Standard E1527-13, Dudek posed questions to the user of this Phase I ESA, the City of Desert Hot Springs. As of the date of this report, Dudek has not received answers to these following questions:

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?
2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
3. As the user of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
4. If the purchase price of the subject property was below fair market value, did this occur because contamination was/is known or believed to be present at the property?
5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, a) Do you know the past uses of the property, b) do you know of specific chemicals that are present or once were present at the property, c) do you know of spills or other chemical releases that have taken place at the property, d) or do you know of any environmental cleanups that have taken place at the property?
6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

## 5.3 Local Agency Records

### 5.3.1 City of Desert Hot Springs Building Department

Dudek contacted the City of Desert Hot Springs Building Department to obtain information on building permits associated with the subject property. The City of Desert Hot Springs Building Department responded on October 7, 2019, indicating that they do not have any records of permits for the subject property (Appendix D).

### 5.3.2 Riverside County Department of Environmental Health

Dudek contacted the Riverside County Department of Environmental Health (EHD) to obtain information about spills, tanks, or chemicals used that may have impacted the environmental conditions on the subject property. The EHD responded that they had records relevant to the request. Dudek reviewed the records on September 17, 2019. The records contained information about hazardous materials inspections, underground storage tanks, and aboveground storage tanks at the subject property. Violations included in the records were mostly administrative in nature (lack of an updated Hazardous Materials Business Plan). Additional violations were noted for the hazardous waste storage (labeling, water in secondary containment, open containers of used oil, and exceeded accumulation dates). The records indicated that two steel USTs (1,000-gallon diesel and 3,000-gallon unleaded gasoline) were installed at the subject property in 1981. UST inspection reports revealed that the tanks passed integrity testing requirements. The USTs were removed in 2000; the UST removal is discussed in more detail in Section 10.1.

### 5.3.3 State Water Resources Control Board

Dudek searched GeoTracker, the State Water Resources Control Board's data management system, for sites that impact, or have the potential to impact water quality in California, with emphasis on groundwater. Records include sites that require cleanup, various unregulated projects, and permitted facilities (GeoTracker 2019). One listing associated with the subject property was identified on the GeoTracker database; additional details are presented in Section 10.1. No other sites were identified within 0.5 miles of the subject property.

#### 5.3.3.1 Subject Property

The subject property address, 65810 Hacienda Avenue, was identified in the LUST GeoTracker database. On August, 5 2000 the site's cleanup status was considered completed and the case was closed. Additional information about the listing is presented in Section 10.1.

Dudek also contacted the State of California Colorado River Regional Water Quality Control Board to obtain any records of spills, releases, or any other incidents that may have impacted the environmental conditions of the subject property. The State of California Colorado River Regional Water Quality Control Board responded on August 26, 2019 with records for the subject property; after review, the records provided are the same records available on GeoTracker (Appendix D).

### 5.3.4 South Coast Air Quality Management District

Dudek contacted the South Coast Air Quality Management District (SCAQMD) to obtain records pertaining to the subject property. The SCAQMD responded on August 22, 2019 with the following records associated to the subject property:

- A Fuel Storage and Dispensing Facility Permit to Operate from 1996: Permission to operate one gasoline UST with 3,000 gallons capacity and one Diesel UST with 1,000 gallons capacity.
- A Fuel Storage and Dispensing Facility Permit to Operate from 2002 and 2012: Permission to operate one gasoline AST with 3,000 gallons capacity.

### 5.3.5 Department of Toxic Substances Control

Dudek contacted the Department of Toxic Substances Control to obtain any records pertaining to the subject property. The Department of Toxic Substances Control responded on August 9, 2019, indicating that they do not have any records for the subject property (Appendix D). Dudek also searched EnviroStor database management system used for tracking cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination. Two sites were identified within 0.5 mile of the subject property; (EnviroStor 2019); these sites were also identified in the EDR Report and are discussed in Section 10.2.

### 5.3.6 National Pipeline Mapping Viewer

Dudek consulted the National Pipeline Mapping System (NPMS) online database. The NPMS provides a public map viewer application that displays data related to gas transmission and hazardous liquid pipelines, liquefied natural gas plants, and breakout tanks under Department of Transportation Pipeline and Hazardous Material Safety Administration jurisdiction (Appendix D) (NPMS 2019).

Dudek identified following information from NPMS Public Viewer:

- An active natural gas transmission pipeline, operated by PG&E, runs along the Golden state Highway 10, approximately 3.9 miles southwest of the subject property.
- An active hazardous liquid pipeline runs along the Golden State Highway 10, approximately 4.0 miles southwest of the subject property.
- An active natural gas transmission pipeline, operated by PG&E, runs along the state Highway 62, approximately 3.7 miles northwest of the subject property.
- There are no accidents or incidents identified on or within 1 mile of the subject property.

INTENTIONALLY LEFT BLANK

# 6 Site Reconnaissance

---

A site reconnaissance was conducted on August 14, 2019 by Susan Smith of Dudek. The site reconnaissance consisted of walking the subject property, including inspection of structures where possible, recording observations, and taking photographs. A site features map is included as Figure 2, Subject Property, and photographs are included in Appendix E.

The subject property is comprised of approximately 10 acres of land within APNs 663-320-008, 663-320-009, 663-320-011, 663-320-020, and 663-320-014 and is located at 65810 Hacienda Avenue, Desert Hot Springs, Riverside County, California (Figure 1). The subject property is accessed via a driveway located on Hacienda Avenue (Figure 2).

Approximately 1/3 of the subject property is developed as a Corporate Yard and animal shelter; the remaining 2/3 of the subject property consists of vacant, undeveloped land (Photographs 1 through 5). A construction staging area is located on the northeastern portion of the subject property (Photograph 6). A waste segregation area is located to the west of the construction staging area (Figure 2; Photograph 7); this area is used to segregate waste collected by the City from illegal dumping activities. There are three structures located to the east of the animal shelter; these buildings are used for general storage and offices (Photograph 8).

The subject property is bound to the north by Flora Avenue then residential housing (Photograph 9), to the south by Hacienda Avenue then residential housing (Photograph 10), to the east by an apartment complex and vacant land (Photograph 11), and to the west by Cholla Drive then residential housing (Photograph 12).

## 6.1 Summary of Observations

### **Surface Water Discharge**

The subject property slopes gently toward the south-southeast.

### **Pits, Ponds, or Lagoons**

No pits, ponds or lagoons were observed on the subject property.

### **Distressed Vegetation**

Distressed vegetation was not observed on the subject property during the site reconnaissance.

### **Indications of Solid Debris Storage**

Asphalt grindings from various operations were stored in piles on the northeastern portion of the subject property in a construction staging area (Photograph 13). A pile of asphalt grindings was observed in the northern portion of the subject property, north of the fuel ASTs (Photograph 14). A pile of clean sand was observed on the central portion of the Corporate Yard portion of the subject property (Photograph 15). There were no other indications of solid debris storage observed on the subject property.

### **Chemical Storage or Use**

Chemicals such as gasoline, diesel, motor oil, and transmission fluid were observed in containers greater than 5 gallons on the subject property (Photograph 16). Smaller quantities of chemicals (compressor oil, gear oil, engine oil) were observed in flammable materials cabinets located in the shop area (Photographs 17 and 18). Multiple containers of paint were observed in the Paint Shop portion of the subject property (Photograph 19). All storage containers appeared to be in good condition and the storage areas were free of staining.

Used oil and used oil filters were stored in a cement-bermed, covered waste storage area (Photograph 20). Minor staining was observed within the cement-bermed area but not outside of the waste storage area.

An out-of-service compressed natural gas station was observed in the northwest corner of the Corporate Yard (Photograph 21).

### **Pools of Liquid**

No unnaturally discolored pools or flowing water were observed on the subject property.

### **Groundwater Wells, Cisterns, Cesspools, or Septic Tanks**

One monitoring well was observed on the southwestern portion of the subject property (Photograph 22). The well reportedly is owned by the local water district (Mission Springs Water District). No cisterns, cesspools, or septic tanks were observed located on the subject property.

### **Drains and Sumps**

No drains or sumps were observed on the subject property.

### **Transformers and Hydraulic Equipment**

Three pole-mounted transformers were observed on the northwestern portion of the subject property, adjacent to the fuel ASTs (Photograph 23). The transformers appeared to be in good condition and free of staining. A hydraulic vehicle lift is reportedly located in the garage area of the subject property; the reservoirs are below grade but were reportedly in good condition (Photograph 24).

### **Abnormal Odor**

No abnormal odors on the subject property were noticed during the site reconnaissance.

### **Soil Disturbances**

No abnormal soil disturbances on the subject property were observed during the site reconnaissance.

### **Storage Tanks**

Two ASTs (one 1,000-gallon diesel and one 3,000-gallon gasoline) were observed on the western side of the Corporate Yard portion of the subject property (Photographs 25 through 27). A backup generator with a diesel

tank was observed to the north of the shop building (Photograph 28). No staining was observed in the vicinity of any tanks on the subject property.

**Pipelines**

No pipelines or pipeline markers were observed on the subject property.

**Staining**

No stained soil was observed on the subject property during the site reconnaissance.

INTENTIONALLY LEFT BLANK

# 7 Review of Historical Aerial Photographs

Dudek reviewed historical aerial photographs obtained from EDR for 1953, 1955, 1972, 1984, 1996, 2002, 2005, 2009, 2012, and 2016 (Appendix F). The photographs provided background information to assess the possibility of past activities that could present environmental concerns.

The aerial photographs are described in Table 1.

**Table 1. Aerial Photographs**

Date	Description
1953	The subject property appears to be vacant, undeveloped land. A dirt road running east-west (present day Hacienda Avenue) appears to the south of the subject property. The surrounding area also appears as vacant and undeveloped land. Some housing developments are present to the east of the subject property.
1955	No apparent changes are observed on the subject property as compared to the 1953 aerial photograph. New roads appear to the north, east and southeast of the subject property. More development appears to the east and northeast of the subject property.
1972	No apparent changes are observed on the subject property as compared to the 1955 aerial photo. Two new dirt roads appears on the southern portion of the subject property. New housing developments appear to the south and southeast of the subject property. The area to the north and to the east appears to be more developed when compared to the 1955 areas photograph. The road running east-west (present day Pierson Boulevard), located north of the subject property, appears to be wider when compared to the 1955 aerial photograph.
1984	A graded area and several new structures appears on the northern portion of the subject property. Two new dirt roads appear to the west and to the north of the subject property. One new dirt road appears to the south of the subject property, giving access to the subject property. The immediately adjacent areas to the east, north and west of the subject property still vacant and undeveloped land. New housing developments appear in the area adjacent and south of the subject property. The surrounding areas to the north, east, and south appears to be more developed when compared to the 1972 aerial photograph.
1996	An asphalted road now gives access to the subject property form Hacienda Boulevard located adjacent and to the south. Additional structures are present on the graded and asphalted area on the northwestern part of the subject property. New developments appear adjacent to and south of the subject property. A new graded area and new structures appear to the east of the subject property. The immediately adjacent area to the east, north, and west still appear to be vacant and undeveloped land. Further development appears adjacent and to the south of the subject property.
2002	A larger area of the subject property appears to be graded and cleared of vegetation. One of the roads on the southern portion of the property appears to be asphalted. No apparent changes are observed in the areas immediately adjacent and to the east, north, and west of the subject property. Additional housing developments appear in the area adjacent and to the south of the subject property.
2005	A new road (present day Flora Avenue) and new block of housing development appears adjacent and to the north of the subject property. Additional structures appear within the new graded area in the subject property.

**Table 1. Aerial Photographs**

Date	Description
2009	No apparent changes are observed within the subject property when compared to the 2005 aerial photograph. New developments appear adjacent to and to the west and northwest of the subject property. A new road appears running north/south (present day Cholla Drive) and parallel to the western boundary of the subject property.
2012	No apparent changes are observed within the subject property when compared to the 2009 aerial photograph. New developments appear adjacent and to the east of the subject property.
2016	No apparent changes are observed when compared to the 2006 aerial photograph.

**Note:** See Appendix F for corresponding EDR photographs.

INTENTIONALLY LEFT BLANK

# 8 Review of Historical Topographic Maps

Dudek reviewed historical topographic maps from 1901, 1940/1941, 1944, 1955/1958, 1957/1958, 1972, 1978, and 2012 (Appendix B). The topographic maps are a historical source that can be used to document the prior use of the subject property and surrounding area.

The topographic maps are described in Table 2.

**Table 2. Topographic Maps**

Date	Scale	Description
1901	1:125,000	The subject property and surrounding area appear to be vacant land.
1940/1941	1:62,500	No apparent changes are observed on the subject property. New roads are present to the east and northeast of the subject property. A light duty road running north south is present to the west northwest of the subject property.
1944	1:62,500	No apparent changes are observed on the subject property and surrounding area when compared to the 1941 topographic map.
1955/1958	1:24,000	A light duty road running north/south is depicted on the southern portion of the subject property. The subject property is depicted as a vacant and undeveloped land. A new light duty road (present day Hacienda Avenue) appears adjacent to the south of the subject property. A creek is depicted running through the southwest corner of the subject property. A new light duty road and some small structures are observed east of the subject property. New roads and additional housing developments are present to the north, east and southeast of the subject property.
1957/1958	1:62,500	There are no apparent changes as compared to the 1955/1958 topographic map.
1972	1:24,000	An additional light duty road running north/south is depicted on the southeastern portion of the subject property. Additional roads appear to the south of the subject property. Further housing developments appear to the north, east, and southeast of the subject property.
1978	1:24,000	The subject property is depicted as vacant and undeveloped land. Further development with new structures appear to the north, east and southeast of the subject property.
2012	1:24,000	An asphalted road is depicted on the southern portion of the subject property. A new road running north/south appear adjacent and to the west of the subject property. A new road running east/west appears adjacent and to the south of the subject property.

**Note:** See Appendix B for corresponding maps.

INTENTIONALLY LEFT BLANK

# 9 Site History

This site history is based on a review of historical aerial photographs, historical topographic maps, and interviews.

The subject property was a vacant land since before 1953. The subject property is currently developed as a corporate yard and animal shelter for the City of Desert Hot Springs.

The information obtained from review of these historical use records is summarized in Table 3.

**Table 3. Site History**

Period	Subject Property	Adjoining Area	Source	Comment
1953 - 1972	The subject property is depicted as vacant, undeveloped land.	Surrounding properties were also primarily vacant land.	AP, TM	The scale of the topographic maps do not show fine detail.
1972-1984	The subject property is vacant, undeveloped land.	Properties in the immediate vicinity of the subject property are vacant and undeveloped land, A grid of minor roads appear to the south of the subject property.	AP, TM	None
1984 - 2002	The subject property is developed with a graded and asphalted area with multiple structures.	Surrounding properties were primarily vacant, except for the adjoining property to the south where appear to be a housing development.	AP, TM	None
2002 - 2016	The subject property is developed with a graded and asphalted area with multiple structures.	Surrounding properties appear to be housing developments	AP, TM	None

**Notes:**

Historical aerial photographs (AP)

Historical topographic maps (TM)

## 9.1 Fire Insurance Maps

Historical Sanborn fire insurance maps were requested from EDR. Sanborn maps provide information regarding the historical uses of the subject property and surrounding properties. Sanborn maps typically exist for cities with populations of 2,000 or more; the coverage is dependent on the location of the subject site within the city limits. The Sanborn Map Report lists the subject property as an unmapped property; no additional information was included in the report (Appendix G, Certified Sanborn Map Report).

## 9.2 City Directory

City directory listings were requested from EDR (Appendix H, City Directory Report). The city directory search was conducted for the subject property, addressed as 65810 Hacienda Avenue, Desert Hot Springs, California. The subject property was not listed in the EDR database search (Appendix H, City Directory Report). With the exception of a church, surrounding property listings are residential.

## 9.3 Review of Environmental Liens

An environmental lien search is required to satisfy the requirements of the “All Appropriate Inquiries Rule for CERCLA [Comprehensive Environmental Response, Compensation and Liability Act]” liability. A lien search was conducted as part of this Phase I ESA for APNs 663-320-008, 663-320-009, 663-320-011, 663-320-020, and 663-320-014. No environmental liens or activity and use limitations were identified with the parcels searched (Appendix I, Environmental Lien Search Report).

## 9.4 Vapor Encroachment Condition

Dudek evaluated vapor encroachment to determine whether there is a potential for vapors originating from contaminated soil and/or groundwater to occur in the subsurface below the existing and potential future on-site structures.

The EDR Records Search was used to evaluate listed contaminated sites as identified in federal, state, and local databases. Information obtained from other sources (historical reports, geologic and hydrogeological information, site reconnaissance, interviews, local regulatory agency responses), as discussed in this report, were also considered.

The EDR vapor encroachment worksheet is used to evaluate types of soils, geology, and hydrology as well as listed contaminated sites as identified in federal, state, and local databases. Dudek reviews the findings in the worksheet and determines if a VEC does or does not exist. The table below presents a summary of the VEC findings.

### Summary of Vapor Encroachment Condition Findings

Potential for Vapor Intrusion on Subject Property	
<i>Areas of Concern</i>	<i>Conclusion</i>
Subject Property (existing conditions)	VEC does not exist.
Subject Property (former condition)	VEC exists.
Adjoining property or nearby property operations or existing conditions	VEC does not exist.
Historical uses of adjoining property or nearby properties	VEC does not exist.
Regulatory review of sites identified on federal, state, and local databases	VEC does not exist.

As discussed in Section 10.1, petroleum hydrocarbon impacts were identified in one shallow soil sample collected in 2000 during underground storage tank removal. A subsequent investigation revealed no subsurface impacts from a location approximately 5 feet away from the original sample location. Based on the limited extent and age of the release (almost 20 years), the VEC associated with the former conditions at the subject property does not present a current VEC for the subject property. Based on the findings of the EDR Vapor Encroachment Screening worksheet, there are no listed sites near the subject property that create a VEC (Appendix J).

# 10 Public Agency Records Search Review

The regulatory database search gives a listing of sites within up to a 1-mile radius of the subject property (“target property” is the term used by EDR) that are known to be chemical handlers, hazardous waste generators, or have reported releases of hazardous substances or petroleum products. Information in these listings includes the location of the site relative to the subject property, type of potential environmental concern present, and the status of the site. In August 2019, EDR conducted the database search for this Phase I ESA; the report is included in Appendix C.

The following sections list the databases that were searched and search distances from the subject property. The regulatory databases identified in Table 4 were included in this search.

**Table 4. Regulatory Database Search**

Acronym	Database	Search Distance	Subject Property Listed?	Number of Surrounding Sites Listed
NPL	National Priorities List (including proposed NPL sites and NPL Liens [target property only])	1 mile	No	0
Delisted NPL	National Priority List Deletions	1 mile	No	0
CERCLIS -SEMS	Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) – Superfund Enterprise Management System	0.5 miles	No	0
CERCLIS NFRAP	CERCLIS No Further Remedial Action Planned	0.5 miles	No	0
CORRACTS	Resource Conservation and Recovery Act (RCRA) Corrective Action	1 mile	No	0
RCRA TSDF	RCRA - Transportation, Storage, and Disposal Facilities	0.5 miles	No	0
RCRA GEN	RCRA registered small or large quantity generators of hazardous waste	0.25 miles	No	0
RCRA-LQG	RCRA Large Quantity Generators	0.25 miles	No	0
RCRA-SQG	RCRA Small Quantity Generators	0.25 miles	No	0
RCRA-CESQG	RCRA Conditionally Exempt Small Quantity Generators	0.25 miles	No	0
RCRA NonGen/NLR	RCRA Handlers, but not generators, of hazardous waste	0.25 miles	No	1
ERNS	Emergency Response Notification System	Target Property	No	0
US ENG CONTROLS	Sites with Engineering Controls	0.5 miles	No	0
US INST CONTROLS	Sites with Institutional Controls	0.5 miles	No	0
RESPONSE	State- and Tribal-Equivalent NPL	1 mile	No	0
ENVIROSTOR	State- and Tribal-Equivalent CERCLIS	1 mile	No	2
SWF/LF	State and Tribal Landfill and/or Solid Waste Disposal Site	0.5 miles	No	0
LUST	State Leaking Underground Storage Tank	0.5 miles	Yes	0
CPS-SLIC	Spills, Leaks, Investigations, and Cleanups	0.5 miles	No	0
Indian LUST	Tribal Leaking Underground Storage Tank	0.5 miles	No	0

**Table 4. Regulatory Database Search**

Acronym	Database	Search Distance	Subject Property Listed?	Number of Surrounding Sites Listed
UST	State and Tribal Registered Underground Storage Tank	0.25 miles	No	0
AST	State and Tribal Registered Aboveground Storage Tank	0.25 miles	Yes	0
Indian UST	Registered Underground Storage Tank on Tribal Land	0.25 miles	No	0
FEMA UST	FEMA-owned Registered Storage Tank	0.25 miles	No	0
LUCIS	Institutional Control/Engineering Control	0.5 miles	No	0
Indian VCP	Voluntary Cleanup on Tribal Land	0.5 miles	No	0
VCP	State and Tribal Voluntary Cleanup	0.5 miles	No	0
US Brownfields	State and Tribal Brownfields	0.5 miles	No	0
HIST UST	Historical Underground Storage Tank	0.25 miles	No	0
HIST CORTESE	Historical Hazardous Waste and Substances List	0.5 miles	No	0
RGA LUST	Recovered Government Archives Leaking Underground Storage Tank	Target Property	Yes	0
INDIAN RESERVATION	Indian Reservations	1 mile	No	0
Additional Environmental Records, including local lists		Varies	Yes	3

**Note:** Refer to Appendix C.

## 10.1 Subject Property Listings

The subject property is listed in eleven different databases. The subject property is reported in the database listings as City of Desert Hot Springs and Desert Hot Springs City Yard. The listings include: LUST, CERS HAZ WASTE, SWEEPS UST, RGA LUST, CERS TANKS, CA FID UST, CERS, HAZNET, AST, and FINDS databases. The LUST database contains information about known releases. A release of gasoline was reported in 2000 during the removal of two underground storage tanks at the subject property. Upon the removal, soil samples were collected from beneath the USTs and the two dispensers. All of the soil samples, with the exception of two soil samples (one beneath the diesel dispenser and one beneath the gasoline dispenser), were reported to have no detections of petroleum hydrocarbons or related compounds. The soil sample collected beneath the diesel dispenser (2 feet below ground surface) had a total petroleum hydrocarbons as diesel of 31 milligrams per kilogram (mg/kg). The soil sample collected beneath the gasoline dispenser (2 feet below ground surface) had a total petroleum hydrocarbons as gasoline concentration of 860 mg/kg. In June 2000 one boring was drilled within 5 feet of the gasoline dispenser to further investigate the impacted soil. The boring was drilled to a depth of 30 feet and soil samples were taken at a 5 foot intervals. Total petroleum hydrocarbons as gasoline, benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether were not detected in any of the soil samples collected. In August 2000, the regulatory agency recommended no further action at the site and the case was closed. Based on the findings of the investigation, the impacted soil beneath the dispenser is limited in extent and is not considered to be a threat to human health or the environment.

The other database listings track information on sites that handle hazardous materials or generate hazardous waste but do not indicate an uncontrolled release of hazardous substances to the environment.

## 10.2 Nearby Property Listings

A total of six nearby sites were listed in the database search report.

Two of the six listings were in the databases that track information on sites that handle hazardous materials or generate hazardous waste, but do not necessarily indicate an uncontrolled release of hazardous substances to the environment.

Two of the six nearby sites (Desert Hot Springs High School and Edward L. Wenzlaff Elementary School) are school properties and were listed in the ENVIROSTOR database. An investigation at the high school property revealed no impacts and no further action was required as of 2003. A 2009 investigation at the elementary school site revealed no impacts at the site and no further action was required as of 2009.

The remaining two sites were listed in databases with known releases and are discussed below.

- Bill's Garage, approximately 0.75 miles northeast of the subject property, is located at 11875 Palm Drive. The site is listed in the LUST, HIST CORTESE, Notify 65, and CERS databases. The LUST database documents a release of gasoline to soil in 1989; the release was discovered during tank closure operations at the site. The case was closed by the regulatory agency in 1992. Based on the distance from the subject property, impacted media (soil only), regulatory status (closed case), and groundwater flow direction (south-southeast, this site is not likely to impact the environmental conditions at the subject property.
- ARCO Facility #1968, approximately 0.9 miles southeast of the subject property, is located at 12775 Palm Drive. The site is listed in the Notify 65 and LUST databases. The LUST databases include two separate releases of oil to the soil; both cases are listed as closed in 1991 and 1995. Based on the distance from the subject property, impacted media (soil only), regulatory status (closed cases), and groundwater flow direction (south-southeast), this site is not likely to impact the environmental conditions at the subject property.

## 10.3 Unmapped Sites

Unmapped sites are flagged by EDR, but not mapped due to insufficient address information. They are usually included in the database search report because they are in the same zip code as the subject property. There were no unmapped sites listed in the EDR Report.

INTENTIONALLY LEFT BLANK

# 11 Potential Hazards and Environmental Concerns

---

Information regarding the following potential sources of hazards and hazardous material releases from the interview, site reconnaissance, and review of regulatory agency records is as follows:

## **Agricultural Use**

The subject property was vacant and undeveloped since at least 1972, and does not appear to have been used for agricultural purposes.

## **Off-Site Sources**

This environmental assessment did not reveal potential off-site sources of contamination that may impact the environmental conditions of the subject property.

## **Residential Use**

Based on a review of historical sources and EDR Reports, the subject property has not been used for residential purposes.

## **Polychlorinated Biphenyl Items**

Three pole-mounted transformers were observed on the subject property; the transformers appeared to be in good condition and free of staining.

## **Fill Material**

No fill material was observed on the subject property.

## **Stained Soil**

No stained soil was observed on the subject property.

## **Debris**

Asphalt grindings were observed on the northern portion of the subject property.

## **Tanks**

Two underground storage tanks were removed from the subject property in 2000. Two ASTs are currently located on the subject property. A backup diesel generator is located on the subject property but is no longer in use. No evidence of leakage or staining was observed during the site inspection.

### **Asbestos and Lead-Based Paint**

The structures on the subject property were constructed on the subject property sometime after 1972 but before 1984. Based on the structures on the subject property, building materials may contain asbestos and lead-based paint.

### **Radon**

The EDR Report presents radon test results for the vicinity of the subject property. The Federal EPA Radon Zone for Riverside County is 2, which corresponds with indoor average expected radon levels of <2 pCi/L. The Federal Radon Action Level is 4 pCi/L.

# 12 Findings and Recommendations

---

Information gathered for this report indicated the following:

- The subject property was vacant, undeveloped land before 1953. The subject property was first developed as a corporate yard and animal shelter sometime after 1972 but before 1984.
- The subject property use has remained unchanged since it was first developed.
- Adjacent and nearby properties have included undeveloped land, residential housing, and a church.
- Two underground storage tanks were removed from the subject property in 2000. One soil sample collected from beneath a fuel dispenser contained petroleum hydrocarbons; subsequent drilling and sampling revealed no impacts and the case was closed with no further action required.
- Based on the documents reviewed, site inspection, and brief visual observation of neighboring properties, it is unlikely that adjacent or nearby properties have impacted the environmental conditions at the subject property.

This assessment revealed one controlled recognized environmental condition at the subject property; no evidence of recognized environmental conditions (REC) were identified in connection with the subject property.

Dudek has the following recommendation:

- Given the age of the structures on the subject property, building materials may contain asbestos and lead-based paint. Prior to the demolition of the structures, a survey should be conducted to determine whether building materials contain asbestos or lead-based paint. If present, these materials should be disposed of in accordance with applicable local, state, and federal guidelines.

INTENTIONALLY LEFT BLANK

# 13 Limitations

---

The following data gaps were identified for this Phase I ESA:

- Dudek did not receive responses for User Provided Information required by ASTM Standard E1527-13.

Based on the review of additional information identified and the history of the subject property, Dudek determines this data gap to be less than significant. Should information be obtained following publication of this report that would change the findings of this report, an addendum with the findings will be submitted.

The findings and conclusions presented in this report are professional opinions based solely on the indicated data described in this report, visual observations of the subject property and vicinity, and our interpretation of the available historical information and documents reviewed. Dudek makes no warranty as to the accuracy of statements made by others or the accuracy of information included in documentation reviewed in connection with this study. This study was not intended to be a definitive investigation of potential contamination at the subject property and the recommendations do not necessarily include all conditions that may be present. It is possible that conditions or contamination exist at the subject property that have not been previously identified or that are not identified in this Phase I ESA.

No warranties or guarantees or representations, expressed or implied, are made by Dudek, except for the representation that this report has been prepared in accordance with current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professionals performing the same or similar services in the same or similar locality. The conclusions are intended exclusively for the purpose outlined herein, and may not be suitable for, or relied upon, by others and any use of this document is at the sole risk of said user.

In accordance with ASTM Standard E 1527-13, this Phase I ESA is valid for 180 days. After 180 days, this report, or the information presented in this report is no longer valid and must be updated or revised, as appropriate.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

65810 HACIENDA AVENUE  
DESERT HOT SPRINGS, CA 92240

#### COORDINATES

Latitude (North): 33.9551350 - 33° 57' 18.48"  
Longitude (West): 116.5133580 - 116° 30' 48.08"  
Universal Transverse Mercator: Zone 11  
UTM X (Meters): 544965.2  
UTM Y (Meters): 3757093.8  
Elevation: 1028 ft. above sea level

# EXECUTIVE SUMMARY

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>DESERT HOT SPRINGS H</i></b> Facility Id: 33820014 Status: No Action Required	<b><i>65850 PIERSON BOULEV</i></b>	<b><i>N 1/4 - 1/2 (0.385 mi.)</i></b>	<b><i>10</i></b>	<b><i>32</i></b>
<b><i>EDWARD L. WENZLAFF E</i></b> Facility Id: 60001140 Status: No Action Required	<b><i>11625 WEST DRIVE</i></b>	<b><i>NNE 1/2 - 1 (0.548 mi.)</i></b>	<b><i>11</i></b>	<b><i>35</i></b>

## ADDITIONAL ENVIRONMENTAL RECORDS

### ***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that

## EXECUTIVE SUMMARY

there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
MARJORIE KIRBY EPA ID:: CAC002978690	66021 ESTRELLA AVENU	ENE 1/8 - 1/4 (0.157 mi.)	9	31

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 03/07/2019 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CAMP ANZA		NW 1/2 - 1 (0.620 mi.)	13	38

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 03/18/2019 has revealed that there are 2 Notify 65 sites within approximately 1 mile of the target property.

Site Name: City of Desert Hot Springs

Violation Date: 01-24-2018

Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Not reported

Violation Division: Riverside County Department of Env Health

Violation Program: HW

Violation Source: CERS

Site ID: 19507

Site Name: City of Desert Hot Springs

Violation Date: 01-24-2018

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

FUDS Detail as of Jan 2015:

Fiscal Year: 2013  
 Federal Facility ID: CA9799F5392  
 RAB: Not reported  
 NPL Status: Not Listed  
 Description: The site is located 45 miles east of Los Angeles in the Arlanza Village District in the city of Riverside, California. The entire camp consisted of 1240 acres. The 1240 acres which were once Camp Anza, are now under numerous ownerships, most of them private residence.  
 History: The property was acquired from private owners in 1942 and 1943 and was categorized as surplus on 12 February 1946. There now are numerous ownerships of properties that once were part of Camp Anza. The portion that contains the sewage treatment plant is owned by the Parks and Recreation Department of the City of Riverside.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: N/A
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 07/02/2019
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/14/2019
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: N/A
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 07/02/2019
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/14/2019
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/11/2019

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019  
Date Data Arrived at EDR: 04/05/2019  
Date Made Active in Reports: 05/14/2019

Telephone: 703-603-8704  
Last EDR Contact: 07/03/2019  
Next Scheduled EDR Contact: 10/14/2019  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/11/2019  
Date Data Arrived at EDR: 04/18/2019  
Date Made Active in Reports: 05/23/2019  
Number of Days to Update: 35

Next Scheduled EDR Contact: 10/28/2019  
Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: 800-424-9346
Date Made Active in Reports: 05/23/2019	Last EDR Contact: 07/02/2019
Number of Days to Update: 35	Next Scheduled EDR Contact: 10/28/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/25/2019	Source: EPA
Date Data Arrived at EDR: 03/27/2019	Telephone: 800-424-9346
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/22/2019	Source: Department of the Navy
Date Data Arrived at EDR: 03/07/2019	Telephone: 843-820-7326
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 05/10/2019
Number of Days to Update: 41	Next Scheduled EDR Contact: 08/26/2019
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 05/29/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 05/29/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/25/2019

Date Data Arrived at EDR: 03/26/2019

Date Made Active in Reports: 05/01/2019

Number of Days to Update: 36

Source: National Response Center, United States Coast Guard

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 04/29/2019

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### **Local Brownfield lists**

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/17/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/18/2018	Telephone: 202-566-2777

#### **Local Lists of Landfill / Solid Waste Disposal Sites**

##### WMUDS/SWAT: Waste Management Unit Database

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Local Lists of Hazardous waste / Contaminated Sites**

### **US HIST CDL: National Clandestine Laboratory Register**

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 02/24/2019	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 02/26/2019	Telephone: 202-307-1000
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 05/24/2019
Number of Days to Update: 50	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: No Update Planned

### **HIST CAL-SITES: Calsites Database**

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### **SCH: School Property Evaluation Program**

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 04/29/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 04/30/2019	Telephone: 916-323-3400
Date Made Active in Reports: 06/27/2019	Last EDR Contact: 04/30/2019
Number of Days to Update: 58	Next Scheduled EDR Contact: 08/12/2019
	Data Release Frequency: Quarterly

### **CDL: Clandestine Drug Labs**

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/12/2018	Telephone: 916-255-6504
Date Made Active in Reports: 08/06/2018	Last EDR Contact: 07/08/2019
Number of Days to Update: 55	Next Scheduled EDR Contact: 10/21/2019
	Data Release Frequency: Varies

### **TOXIC PITS: Toxic Pits Cleanup Act Sites**

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995	Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995	Telephone: 916-227-4364
Date Made Active in Reports: 09/26/1995	Last EDR Contact: 01/26/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/27/2009
	Data Release Frequency: No Update Planned

### **CERS HAZ WASTE: CERS HAZ WASTE**

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/24/2019  
Date Data Arrived at EDR: 02/26/2019

	Data Release Frequency: Varies

## CA FID UST: Facility Inventory Database

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/1994	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 09/05/1995	Telephone: 916-341-5851
Date Made Active in Reports: 09/29/1995	Last EDR Contact: 12/28/1998
Number of Days to Update: 24	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## CERS TANKS: California Environmental Reporting System (CERS) Tanks

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

Date of Government Version: 04/09/2019	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 04/11/2019	Telephone: 916-323-2514
Date Made Active in Reports: 05/08/2019	Last EDR Contact: 07/23/2019
Number of Days to Update: 27	Next Scheduled EDR Contact: 11/04/2019
	Data Release Frequency: Quarterly

## **Local Land Records**

### LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 02/28/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 03/01/2019	Telephone: 916-323-3400
Date Made Active in Reports: 04/02/2019	Last EDR Contact: 06/03/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 09/16/2019
	Data Release Frequency: Varies

### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 04/11/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/18/2019	Telephone: 202-564-6023
Date Made Active in Reports: 05/23/2019	Last EDR Contact: 07/02/2019
Number of Days to Update: 35	Next Scheduled EDR Contact: 10/14/2019
	Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/04/2019	Source: DTSC and SWRCB
Date Data Arrived at EDR: 03/05/2019	Telephone: 916-323-3400
Date Made Active in Reports: 04/01/2019	Last EDR Contact: 06/04/2019
Number of Days to Update: 27	Next Scheduled EDR Contact: 09/16/2019
	Data Release Frequency: Semi-Annually

## **Records of Emergency Release Reports**

### **HMIRS: Hazardous Materials Information Reporting System**

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 03/25/2019	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 03/26/2019	Telephone: 202-366-4555
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 49	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

### **CHMIRS: California Hazardous Material Incident Report System**

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 10/24/2018	Source: Office of Emergency Services
Date Data Arrived at EDR: 01/24/2019	Telephone: 916-845-8400
Date Made Active in Reports: 03/05/2019	Last EDR Contact: 06/24/2019
Number of Days to Update: 40	Next Scheduled EDR Contact: 08/05/2019
	Data Release Frequency: Semi-Annually

### **LDS: Land Disposal Sites Listing (GEOTRACKER)**

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 12/10/2018	Source: State Water Quality Control Board
Date Data Arrived at EDR: 12/11/2018	Telephone: 866-480-1028
Date Made Active in Reports: 01/15/2019	Last EDR Contact: 06/11/2019

	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895

Number of Days to Update: 50	Next Scheduled EDR Contact: 09/02/2019
	Data Release Frequency: Varies

### DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 888-275-8747
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 07/09/2019
Number of Days to Update: 62	Next Scheduled EDR Contact: 10/21/2019
	Data Release Frequency: Semi-Annually

### FEDLAND: Federal and Indian Lands

Federally and Indian administrated lands of the United States. Lands included are administrated by: Army Corps of Engineers, Bureau of Reclamation, National Wild and Scenic River, National Wildlife Refuge, Public Domain Land, Wilderness, Wilderness Study Area, Wildlife Management Area, Bureau of Indian Affairs, Bureau of Land Management, Department of Justice, Forest Service, Fish and Wildlife Service, National Park Service.

Date of Government Version: 12/31/2005	Source: U.S. Geological Survey
Date Data Arrived at EDR: 02/06/2006	Telephone: 888-275-8747
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 07/10/2019
Number of Days to Update: 339	Next Scheduled EDR Contact: 10/21/2019
	Data Release Frequency: N/A

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013  
Date Data Arrived at EDR: 03/21/2014  
Date Made Active in Reports: 06/17/2014

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009  
Date Data Arrived at EDR: 12/10/2010  
Date Made Active in Reports: 02/25/2011

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/25/2019

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995  
Date Data Arrived at EDR: 07/03/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

DHS CORPORATE YARD PARK  
65810 HACIENDA AVENUE  
DESERT HOT SPRINGS, CA 92240

### TARGET PROPERTY COORDINATES

Latitude (North):	33.955135 - 33° 57' 18.49"
Longitude (West):	116.513358 - 116° 30' 48.09"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	544965.2
UTM Y (Meters):	3757093.8
Elevation:	1028 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	5641202 DESERT HOT SPRINGS, CA
Version Date:	2012
East Map:	5639298 SEVEN PALMS VALLEY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06065C0885G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06065C0905G	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
DESERT HOT SPRINGS	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Carsitas

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

### Soil Map ID: 2

Soil Component Name: Carsitas

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

#### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

### RADON

#### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Desert Hot Springs CA 92240

RE: Leaking underground fuel tank at the Desert Hot Springs City Yard at 65810 Hacienda Ave.,  
Desert Hot Springs Site #0016118

Dear Mr. Janis:

The Riverside County Department of Environmental Health, Hazardous Materials Division has received your workplan to conduct soil investigation for the above referenced site. The workplan was dated May 11, 2000 and signed by Quin Kinnebrew of Black Rock Geosciences.

This office accepts the workplan with the following changes:

- The soil boring shall be advanced to 40 feet below the deepest contamination. Laboratory analysis of eight consecutive samples showing non-detectable concentrations of petroleum constituents in the bottom of the boring will be necessary to verify that the extent of contamination has been determined.
- The interval between sample collection points must not exceed five feet. A sufficient number of samples must be analyzed to adequately show contaminant level trends in the subsurface.
- The Local Oversight Program has revised the laboratory analyses and detection limits requirements. Enclosed is a chart of the new limits.
- Contact this office at least five working days prior to the commencement of the site field activities.

Prior to commencing work, it is recommended that you contact the State Water Resources Control Board, UST Clean-Up Fund Program to see whether the project you are proposing will be fully reimbursed by the State Fund. Their telephone number is 1-800-813-FUND.

7 T 2240006

If you have any questions concerning this matter, contact me at (760) 863-8976. Our office address is: 47923 Oasis, Indio, CA, 92201. Our fax number is (760) 863-8303.

Sincerely,

Linda D. Shurlow, REHS

RE: Underground Storage Tank Cleanup at City of Desert Hot Springs City Yard at 65810  
Hacienda Ave., Desert Hot Springs

Dear Responsible Parties,

This letter confirms the completion of site investigation and for the underground storage tanks formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks are greatly appreciated.

Based on the information in the above-referenced file, and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and that no further action related to the petroleum release at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Earl E. Tuntland  
Assistant Environmental Health Administrator

**V. Local Agency Representative Data**

NAME: Earl Tuntland	TITLE: Asst. Environmental Health Administrator
SIGNATURE: <i>[Signature]</i>	DATE: 8/1/00

**VI. RWQCB Notification**

DATE SUBMITTED TO RWQCB:	RWQCB RESPONSE:
RWQCB STAFF NAME: Abdi Hajle	TITLE: Senior Eng. Geologist
SIGNATURE: <i>[Signature]</i>	DATE: 07/26/2000

**VII. Additional Comments, Data, Etc.**

On February 10, 2000, two tanks and the dispenser were removed. Soil sample results from under the tanks were all ND for TPHg, TPHd, BTEX, and MTBE. Sample results from under the dispenser showed 860 ppm TPHg, 31ppm TPHd, and ND for BTEX and MTBE. The site was placed into LOP.

On June 2, 2000, one geoprobe boring was drilled to 30' before hitting refusal. The original boring had to be moved seven times due to refusal on cobbles and/or boulders. Soil samples were taken every 5'. No TPHg, BTEX, or MTBE was detected in any of the samples.

The consultant is requesting closure based on the apparent limited extent of the contamination beneath the former gasoline dispenser.

Project No. 4031

To: City of Desert Hot Springs  
65950 Pierson Boulevard  
Desert Hot Springs, California 92240

Attention: Mr. Mike Janice

Subject: Soil Investigation at 65810 Hacienda Avenue, Desert Hot Springs, California (Site #0016118).

## Introduction

The attached report, prepared by Black Rock Geosciences, provides the results of a subsurface soil investigation conducted at the subject site on June 2, 2000 (Figure 1). This investigation was conducted in response to an elevated gasoline concentration reported in soil collected beneath a former gasoline dispenser. The purpose of this investigation was to assess the vertical extent of impacted soil beneath this dispenser. The following sections present a brief site background, investigative procedures, and a summary of our findings, conclusions, and recommendations.

## Background

In February 2000, one diesel underground storage tank (UST), one gasoline UST, and two fuel dispensers were removed from the subject site (Figures 2 and 3). Upon their removal, soil samples were collected beneath the USTs and dispensers. Soil samples were collected at 14 and 18 feet below ground surface (bgs) at the gasoline UST location, and at 8 and 12 feet bgs at the diesel UST location. Two soil samples were collected at 2 feet bgs at the former dispenser location; one beneath the diesel dispenser, and one beneath the gasoline dispenser.

Collected soil samples were analyzed for diesel, gasoline, benzene, toluene, ethylbenzene, xylenes (BTEX), and/or methyl tertiary butyl ether (MTBE). Diesel, gasoline, BTEX, and MTBE were not detected in the soil samples collected beneath the former USTs. The samples collected beneath the former dispensers were reported with no detectable BTEX or MTBE concentrations. The soil sample collected beneath the diesel dispenser was reported with a diesel concentration of 31 milligrams per kilogram (mg/kg). The sample collected beneath the gasoline dispenser was reported with a gasoline concentration of 860 mg/kg. The extent of the impacted soil beneath the gasoline dispenser was not assessed at the time of this sampling.

## Field Investigation

**Boring and Sampling Locations** - One boring (B-1) was sampled during this investigation. This boring was placed within the former fuel dispenser location (Figure 3). As noted in the attached boring log, this boring was moved seven times as a result of refusal on cobbles and/or boulders. The boring was kept within a 5-foot

79 2240006

area within the dispenser area. This boring was sampled at 5-foot intervals to a depth of 30 feet bgs. The boring was initially planned for a 45 feet depth, or 40 feet below the deepest known contamination. The sampling was ceased at a 30-foot depth due to refusal.

**Soil Sampling Description** - Soil samples were collected using a Geoprobe assembly. At each sampling interval, soil was driven into four 6-inch-long brass tubes seated within a stainless steel drive sampler. Upon removal from the subsurface, the lowest tube was immediately capped on each end with Teflon tape, secured with plastic caps, and labeled with the boring identification number, sample depth, date, and time. Each capped soil sample was sealed within a Ziplock™ bag, and then immediately placed within ice in an ice chest.

Soil collected from the second lowest tube was reviewed for classification and the possible presence of staining and/or odor. A portion of this sample was also placed in a sealable bag for a headspace measurement. The headspace of each bag was measured (for volatile organic compounds) using a photoionizing detector. Soil descriptions and headspace measurements were recorded on Black Rock Geosciences' standard boring log form.

To minimize the potential for cross contamination, sampling equipment was carefully decontaminated by washing with a mild solution of liquinox, and double rinsing with tap water between each sampling interval.

Following drilling, the borings were backfilled with bentonite pellets, hydrated with clean water, and then capped at the surface with soil (existing surface).

**Laboratory Analyses** - Chemical analyses were performed by a California Department of Health Services-certified laboratory. Each collected soil sample was analyzed for gasoline using EPA Method 8015 and BTEX/MTBE using EPA Method 8260. The results of the chemical analyses are summarized in Table 1. The laboratory report is provided as an attachment to this report.

#### Summary of Results

- Onsite soils observed during drilling consisted of dry to damp fine to coarse sand with trace gravel to a depth of 30 feet. Due to refusal conditions, cobbles and/or boulders are suspected at depth. These soils are alluvial in origin (Rogers, 1965).
- Groundwater was not encountered within 30 feet of the surface. Groundwater beneath the site is anticipated at approximately 290 feet bgs (Moyle, 1974).
- Physical evidence (staining and/or odor) of petroleum hydrocarbon contamination was encountered in one of the onsite samples (B-1-10). This sample, collected at 10 feet bgs, had a very slight weathered gasoline odor. Staining was not observed in the soil collected at this depth. Staining and/or odor were not encountered within the remaining collected soil samples (see attached boring log).
- PID measurements of the collected soil samples ranged between 5.2 to 10.2 parts per million (ppm). The sample collected at 10 foot bgs was reported with the highest PID measurement (10.2 ppm). The other samples had PID measurements ranging between 5.2 and 6.6 ppm. Background measurements ranged between 3.9 and 4.4 ppm.

- Gasoline, BTEX, and MTBE were not detected in any of the soil samples collected (Table 1). Other volatile organic compounds included in the Method 8260 analysis were also not detected in the collected soil samples (see attached laboratory report).

Conclusions and Recommendations

Based on the findings of this investigation, a substantial release of gasoline has not occurred beneath the former gasoline fuel dispenser. The gasoline-impacted soil reported at 2 feet below the dispenser is believed limited between 2 feet and 5 feet below the ground surface. Figure 4 presents a cross section through the area formerly containing the fuel USTs and dispensers. As noted in this cross section, soil samples collected between 5 and 30 feet bgs (including those collected beneath the USTs) were reported with no detectable gasoline, BTEX, or MTBE. Due to their absence between 5 and 30 feet bgs, these constituents of concern are not suspected at depths greater than 30 feet.

Based on its apparent limited extent, the impacted soil beneath the former gasoline dispenser is not considered a threat to human health or the environment. Further soil and/or groundwater investigations, monitoring, and/or remediation are not considered warranted in the vicinity of the former fuel dispenser or USTs. Site closure is recommended.

If you have any questions, comments, or require additional information regarding this report, please contact the undersigned at (714) 771-3050.

Respectfully submitted,

Quin Kinnebrew, CEG, REA

## LIMITATIONS

This investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by experienced environmental professionals practicing in this or similar locations. No other warranty, expressed or implied, is granted or intended as part of this service.

The soil samples collected during this investigation are believed representative of the areas sampled. However, environmental and soil conditions can vary significantly between and away from the locations sampled. As in most projects, conditions revealed by additional subsurface investigations may be at variance with preliminary findings. If this occurs, experienced environmental professionals must evaluate the changed conditions, and adjust conclusions and recommendations provided herein.

The interpretations and conclusions contained in this report are, in part, based on laboratory analyses that were intended to detect the presence and concentration of specific chemical constituents in samples collected from the subject site. The analyses have been conducted by an independent laboratory that is certified by the State of California to conduct such analyses, and which uses methodologies mandated by the Environmental Protection Agency in the performance of such analyses. Black Rock Geosciences has no involvement in, or control over, such analyses and has no non-laboratory means of confirming the accuracy of such laboratory results. Black Rock Geosciences, therefore, disclaims any responsibility or any inaccuracy in such laboratory results.

The findings of this report are valid as of the present date. However, changes in the conditions of a property can and do occur with the passage of time, whether they be due to natural processes or the work of people on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and revision as changed conditions are identified.

**SunStar Laboratories Incorporated Batch Number: T-1795**

Dear Mr. Kinnebrew:

This report contains the analytical results for six (6) soil samples received under chain of custody by SunStar Laboratories Incorporated on June 2, 2000. These samples are associated with your *City of Desert Hot Springs #4031* project.

**Project Summary**

Samples were received in good condition. Sample container(s) and label(s) agreed with the chain of custody as to sample ID, collection time/ date, requested analyses and/or preservatives.

Samples were received in time to meet the method holding time specifications.

All applicable internal quality control analyses including calibration verifications, calibration (instrumentation), method blanks, matrix spike (MS) and matrix spike duplicate (MSD) met method specified acceptance criteria. Any anomalies are reported within the case narrative. There are no anomalies associated with this batch number.

If you require further information or clarification, please feel free to contact me at (714) 505-4010.

Sincerely,

Reviewer

Subject: Work Plan to Conduct a Soil Investigation at 65810 Hacienda Avenue, Desert Hot Springs, California.

### Introduction

Black Rock Geosciences has prepared this work plan to conduct a soil investigation at the subject site (Figure 1). This work plan was prepared for the city of Desert Hot Springs in response to a fuel release at the subject site. This fuel release was encountered following the removal of the two onsite underground storage tanks (USTs) and an adjoining fuel dispenser.

In February 2000, one diesel UST, one gasoline UST, and one fuel dispenser were removed from the subject site (Figure 2). Upon their removal, soil samples were collected beneath the USTs and dispenser and analyzed for diesel, gasoline, benzene, toluene, ethylbenzene, xylenes (BTEX), and/or methyl tertiary butyl ether (MTBE). It is our understanding that elevated diesel, gasoline, BTEX and/or MTBE concentrations were not reported in the soil samples collected beneath the former USTs. Elevated gasoline, BTEX, and/or MTBE concentrations were, however, reported in a sample collected immediately beneath the fuel dispenser. The extent of the impacted soil beneath the fuel dispenser was not assessed at the time of sampling.

The purpose of this investigation is to assess the vertical extent of impacted soil beneath the former fuel dispenser. This work plan proposes sampling soil from one boring placed over the former fuel dispenser location. The following sections present our planned investigative procedures.

### Field Investigation

**Boring and Sample Locations** - As noted above, one borings is planned for this investigation. This boring will be placed over the former fuel dispenser location (Figure 2). This boring will be sampled at five foot intervals to a depth of 45 feet below ground surface.

If evidence of impacted soil is encountered in the deepest planned sample, additional samples will be collected until the vertical extent of impacted soil has been determined. Additional borings may also be sampled if significant soil contamination is encountered in the planed boring.

---

**Soil Collection** - Soil samples will be collected using a Geoprobe assembly. At each sampling interval, soil will be collected in brass or acetate tubes. The lower tube portion will be capped on each end with Teflon tape, secured with plastic caps, and labeled with the boring identification number, sample depth, date, and time. The sealed soil samples will be placed in an ice-cooled chest for transportation to a State-certified laboratory along with a standard chain-of-custody record. Samples will arrive at the laboratory within 6 hours of collection.

Soil collected from the second lowest tube will be reviewed for classification (by a registered geologist) and the possible presence of staining and/or odor. A portion of this sample will also be placed in a sealable bag for headspace measurements. The headspace of each bag will be measured (for volatile organic compounds) using a photoionizing detector. Soil descriptions and headspace measurements will be recorded on Black Rock Geosciences' standard boring log form.

**Decontamination** - To minimize the potential for cross contamination, sampling equipment will be decontaminated by washing with a mild solution of liquinox, and double rinsing with tap water between each sampling interval.

**Backfilling** - Following drilling, the boring will be backfilled with hydrated bentonite pellets and capped at the surface with soil (existing surface).

**Laboratory Analyses** - Chemical analyses will be performed by a California Department of Health Services-certified laboratory. Six of the collected soil samples will be analyzed using the following test methods:

- Gasoline using EPA Method 8015;
- BTEX using EPA Method 8021; and
- MTBE using EPA Method 8021.

The six soil samples collected between 5 and 30 feet below ground surface will initially be scheduled for analyses. If elevated headspace measurements are in deeper soil samples, these samples will also be scheduled for analyses.

#### Data Analyses and Report Preparation

The data collected during the field investigation and the results of the chemical analyses will be used to prepare a formal report, which will include appropriate figures and tables, and a summary of findings, conclusions, and recommendations. This report will also include data collected during the removal of the former onsite fuel system (not currently available). The report will present the general horizontal and vertical extent of impacted soil (if any). If warranted, the report will also provide a remedial action plan to mitigate any impacted soil.

If you have any questions, comments, or require additional information regarding this work plan, please contact the undersigned at (714) 771-3050.

Respectfully submitted,

Quin Kinnebrew, CEG, REA

CERTIFIED MAIL #Z 385 816 300

March 13, 2000

Site # 0016118

Mike Janis  
City of Desert Hot Springs  
65950 Pierson Blvd.  
Desert Hot Springs CA 92240

Dear Mr. Janis:

RE: Underground Storage Tank Cleanup at Desert Hot Springs City Yard at 65810 Hacienda Ave., Desert Hot Springs

It has come to the attention of the County of Riverside, Department of Environmental Health, Hazardous Materials Management Division that an unauthorized release has occurred from the underground storage tank system at the above referenced site. The resulting soil and/or groundwater contamination must be handled accordingly.

As a responsible party, it is your responsibility under the California Code of Regulations, Title 23, Division 3, Chapter 16, Article 11 to take corrective action for the unauthorized release at the above referenced site. At this time, a subsurface investigation must be conducted to delineate the lateral and vertical extent of soil contamination and determine possible impacts to groundwater. Based on the results of this investigation, it is your responsibility to remediate the adverse effects of the unauthorized release.

Bids for work should be solicited and received from at least three companies. Please be certain that you and your contractor(s) have all appropriate licenses and permits necessary to perform this work, such as a C-57 for well drilling, County of Riverside well permits, South Coast Air Quality Management District permits, etc. Copies of these documents should be available for inspection by County personnel on request. Results of all investigations must be submitted to this office in the form of technical reports prepared by a qualified professional who is registered as an engineer or geologist in the State of California.

Prior to conducting any work at the site, a detailed workplan must be submitted and accepted by this office. Contact this office on or before April 13, 2000, to discuss the plans for the first phase of work on the site. A workplan must be received by this office on or before May 13, 2000.

Site #0016118

It is also your responsibility under California Code of Regulations Title 23 Water Sections 2652(d), 2726(b) and 2727(c) to provide at a minimum, a quarterly status report to this office every three (3) months until site investigation and cleanup are complete. The status report should detail any investigative, remedial, or other action(s) taken regarding the site. The status report should include, at a minimum, information listed on the sample quarterly status report form enclosed with this letter. We suggest that you make copies of the report form for use each quarter. The quarterly status report shall be submitted within 15 days of the end of each quarter on the following schedule:

Quarter 1 - January thru March.....	Submit by April 15
Quarter 2 - April thru June.....	Submit by July 15
Quarter 3 - July thru September.....	Submit by October 15
Quarter 4 - October thru December..	Submit by January 15

Failure to provide underground quarterly status reports is a violation of Riverside County Ordinance 617.4. Violations of this ordinance can result in the issuance of a citation.

The State of California has set up the Underground Storage Tank Cleanup Fund to pay for corrective action at sites where unauthorized releases of petroleum from USTs have caused contamination of soil and/or water. Monies from this Cleanup Fund (up to \$995,000) may be available to you. Please refer to the enclosed pamphlet for more information regarding the Cleanup Fund.

Copies of all correspondence submitted to this office should be sent to the California Regional Water Quality Control Board, Colorado River Region at 73720 Fred Waring Drive, Suite 1000, Palm Desert, CA 92260.

Should you have any questions concerning this matter, please contact me or James Ray at (760) 863-8976.

Sincerely,

Linda D. Shurlock, REHS

NOTICE OF RESPONSIBILITY

SITE #: 0016118  
SITE NAME: Desert Hot Springs City Yard  
ADDRESS: 65810 Hacienda Ave.  
CITY/STATE/ZIP: Desert Hot Springs CA 92240

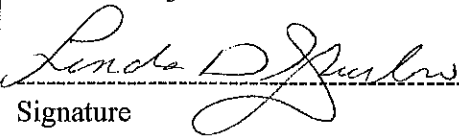

DATE FIRST REPORTED: 3/13/00  
SUBSTANCE: gasoline  
FEDERAL X STATE     

RESPONSIBLE PARTY: City of Desert Hot Springs  
RESPONSIBLE PARTY CONTACT: Mike Janis  
ADDRESS: 65950 Pierson Blvd.  
CITY/STATE/ZIP: Desert Hot Springs CA 92240

Pursuant to Section 25297.1 and 25297.15 of the Health and Safety Code, you are hereby notified that the above site has been placed in the Local Oversight Program and the individual(s) or entity(ies) shown above, or on the attached list, has(have) been identified as the party(ies) responsible for investigation and cleanup of the above site. Section 25297.15 further requires the primary or active Responsible Party to notify all current record owners of fee title before the local agency considers cleanup or site closure proposals or issues a closure letter. For purposes of implementing section 25297.15, this agency has identified the City of Desert Hot Springs as the primary or active Responsible Party. It is the responsibility of the primary or active Responsible Party to submit a letter to this agency within 20 calendar days of receipt of this notice which identifies all current record owners of fee title. It is also the responsibility of the primary or active Responsible Party to certify to the local agency that the required notifications have been made at the time a cleanup or site closure proposal is made or before the local agency makes a determination that no further action is required. If property ownership changes in the future, you must notify this local agency within 20 calendar days from when you are informed of the change.

Any action or inaction by this local agency associated with corrective action, including responsible party identification, is subject to petition to the State Water Resources Control Board. Petitions must be filed within 30 days from the date of the action/inaction. To obtain petition procedures, please FAX your request to the State Water Board at (916) 227-4349 or telephone (916) 227-4408.

Pursuant to Section 25299.37(c)(7) of the Health and Safety Code, a responsible party may request the designation of an administering agency when required to conduct corrective action. Please contact this office for further information about the site designation process.

Dear Mr. Janis:

RE: Underground Storage Tank Cleanup at Desert Hot Springs City Yard at 65810 Hacienda Ave., Desert Hot Springs

The purpose of this letter is to inform you that County of Riverside, Department of Environmental Health, Hazardous Materials Management Division has entered into an agreement with the State of California Water Resources Control Board to oversee the cleanup and mitigation of contaminated sites resulting from the unauthorized release of hazardous substances from underground storage tanks. The cleanup of these sites is necessary to protect the groundwaters of the state from contamination and to protect the public from exposure to hazardous materials.

Enclosed you will find the Notice of Responsibility. This is formal notification concerning your responsibility for corrective action at this site.

If any of the information is incorrect, or if you should have any questions, please contact me as soon as possible at (760) 863-8976.

Sincerely,

## **NOTICE OF VIOLATION**

### **FINAL NOTICE**

**Facility ID:** FA0016879  
**Facility Name:** City of Desert Hot Springs  
**Facility Address:** 65810 Hacienda Ave  
Desert Hot Springs, CA 92240

Our records currently indicate that your facility has failed to electronically recertify and resubmit your Hazardous Materials Business Plan (HMBP) online in the California Environmental Reporting System (CERS). This recertification and resubmission is required by California Health and Safety Code, Sections 25508 and 25508.2 and California Code of Regulations, Title 27, Section 15188. A Notice to Comply was previously sent to your facility on 6/1/2017 advising you of the requirement. This was followed with a Notice of Violation dated 7/5/2017 directing compliance.

The Riverside County Department of Environmental Health Hazardous Materials Management Branch is preparing to initiate enforcement proceedings against your facility for failing to recertify and resubmit a HMBP into CERS. California Health and Safety Code Section 25515 authorizes the Department to assess civil penalties of up to five thousand dollars (\$5,000) for each day in which this violation remains uncorrected.

You are hereby ordered to immediately log in to CERS at <http://cers.calepa.ca.gov> and submit an updated HMBP. Assistance with the CERS system can be found online at <https://cersbusiness.calepa.ca.gov/help>. Your submission must be received prior to 9/8/2017 or further enforcement action will be taken.

If you have any questions regarding this Notice of Violation or if you require assistance, please contact a hazardous materials specialist at (888) 722-4234.

Sincerely,

Jeremy Gates, MISM, REHS  
Enforcement Officer  
Hazardous Materials Management Branch (CUPA)

**INVOICE**

The current Environmental Health Permit(s) under which you operate expires shortly. Applicable County ordinance requires that renewal fees for health permits be paid no later than 30 days after the applied date of the original permit fee charges. If the renewal fee is postmarked after the 30 day period, the fee must be accompanied by a 20% penalty fee. If the renewal fee is postmarked 60 days from the applied date, the fee must be accompanied by a 100% penalty fee.

Our records indicate that you operate the following facility:

City of Desert Hot Springs  
 65810 Hacienda Ave Desert Hot Springs, CA 92240

**\*\*Re-activated generator program\*\***

**\*\*Pro-rated from 02/28/18 to 11/30/18\*\***

Supplemental Inspection Report

Facility Name: <b>CITY OF DESERT HOT SPRINGS</b>	Permit #: <b>PR00</b>	Date: <b>1/24/18</b>
Address: <b>65810 HACIENDA AVE DESERT HOT SPRINGS</b>		
RE: <b>HAZARDOUS WASTE GENERATOR</b>		

Remarks:

FACILITY IS A MAINTENANCE YARD GENERATING USED OIL, FILTERS, MISC. WASTE PICKED UP FROM CITY STREETS.

(3030010) HAZARDOUS WASTE DRUMS ON SITE HAVE BEEN STORED BEYOND REQUIRED ACCUMULATION TIME AND REQUIRE DISPOSAL. OWNER/OPERATOR SHALL HAVE ACCUMULATION DATES NOT EXCEED 7180 DAYS.

(3030031, 3030017) OBSERVED OPEN CONTAINERS OF USED OIL STORED IN HAZARDOUS WASTE AREA. OWNER/OPERATOR SHALL PROPERLY STORE/LABEL ALL HAZARDOUS WASTE CONTAINERS.

NOTE: ENSURE ALL SECONDARY CONTAINMENT DRAINS/VALVES ARE MAINTAINED SEALED/CLOSED UNTIL INSPECTED BY FACILITY.

Re: Generator - Reinspect Facility # 52951

Remarks:

232 238) You are overdue to have your used oil and filters picked up. Use a licensed HAZ waste hauler. Make sure you keep a copy of waste manifest on file available for review.

Provide copy of your new EPA ID number.

Clean water from your secondary containment area.

Re: Generator - Reinspect

Facility # 82931

Remarks:

228, 232, 238, 240) You are advised to have used oil & filters picked up. Have waste handled by a licensed haz-waste hauler. When waste is removed keep a copy of waste manifest on file available for review.

234) Document training.

234) There is a bucket of oil located next to waste drums. The bucket is open. Store closed or pour used oil into drum and store drum closed.

242) There ~~are~~ are two open buckets of used oil filters located next to used oil drums. Store used filters in a sealable container labeled used oil filters.

243) You have too many used batteries stored at facility. Properly dispose of batteries.

\* The new Jetty Lube on Palm Drive does not currently have approved used oil tanks. Please notify this agency if facility attempts to install new/used oil tanks.

Specialist John Bell

Re: Generator Reinspect

Facility # 52951

Remarks:

225) Pay permit invoice when you receive it.

226) Obtain an EPA ID number send completed application to DTSC.

228, 232, 238, 240) You need to have your used oil picked up. Keep copy of waste manifest on file available for review when waste is removed.

242) There are two buckets of used filters next to your oil drums. Used filters need to be stored in a sealable container labeled 'USED FILTERS'.

Re: Generator - Routine Facility # 52951

Remarks:

- 201, 23a) Do not store open containers of oil. Pour buckets into drum promptly.
- 207) You need to have your used oil picked up. Have a pick up at least once a year.
- 206) All drums of waste need to be labeled as to contents, i.e. USED OIL, USED OIL FILTERS, USED ANTIFREEZE etc. Drums of waste also require 'Haz Waste' labels. Fill out label then place on drum.
- 210) Ensure all drums & buckets of waste material are stored closed when not in use.
- 225) Obtain an EPA ID#. Packet provided. You will need this number to have your waste removed.
- 228, 232, 238, 240) Your Haz Waste must be hauled by a licensed Haz Waste hauler. When waste is picked up keep copies of waste manifest on file available for review.

THE FOLLOWING VIOLATIONS WERE OBSERVED AT TIME OF INSPECTION:

(4010008) SPCC TEMPLATE WAS NOT AVAILABLE FOR REVIEW AT TIME OF INSPECTION. OWNER/OPERATOR SHALL MAINTAIN SPCC TEMPLATE ON SITE.

No violations observed during inspection

This report shall serve as a notice to comply for minor violations and a notice of violation for all other violations.

You are hereby ordered to correct all noted violations within 30 days, or according to individual correction summaries provided, whichever is less.

**U.S. EPA Form 8700-22**

Read all instructions before completing this form.

1. This form has been designed for use on a 12-pitch (elite) typewriter which is also compatible with standard computer printers; a firm point pen may also be used—press down hard.
2. Federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, and disposal facilities to complete this form (EPA Form 8700-22) and, if necessary, the continuation sheet (EPA Form 8700-22A) for both inter- and intrastate transportation of hazardous waste.

Public reporting burden for this collection of information is estimated to average: 30 minutes for generators, 10 minutes for transporters, and 25 minutes for owners or operators of treatment, storage, and disposal facilities. This includes time for reviewing instructions, gathering data, completing, reviewing and transmitting the form. Any correspondence regarding the PRA burden statement for the manifest must be sent to the Director of the Collection Strategies Division in EPA's Office of Information Collection at the following address: U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW., Washington, DC 20460. Do not send the completed form to this address.

**I. Instructions for Generators**

**Item 1. Generator's U.S. EPA Identification Number**

Enter the generator's U.S. EPA twelve digit identification number, or the State generator identification number if the generator site does not have an EPA identification number.

**Item 2. Page 1 of \_\_\_\_**

Enter the total number of pages used to complete this Manifest (i.e., the first page (EPA Form 8700-22) plus the number of Continuation Sheets (EPA Form 8700-22A), if any).

**Item 3. Emergency Response Phone Number**

Enter a phone number for which emergency response information can be obtained in the event of an incident during transportation. The emergency response phone number must:

1. Be the number of the generator or the number of an agency or organization who is capable of and accepts responsibility for providing detailed information about the shipment;
2. Reach a phone that is monitored 24 hours a day at all times the waste is in transportation (including transportation related storage); and
3. Reach someone who is either knowledgeable of the hazardous waste being shipped and has comprehensive emergency response and spill cleanup/incident mitigation information for the material being shipped or has immediate access to a person who has that knowledge and information about the shipment.

**Note:** Emergency Response phone number information should only be entered in Item 3 when there is one phone number that applies to all the waste materials described in Item 9b. If a situation (e.g., consolidated shipments) arises where more than one Emergency Response phone number applies to the various wastes listed on the manifest, the phone numbers associated with each specific material should be entered after its description in Item 9b.

**Item 4. Manifest Tracking Number**

This unique tracking number must be pre-printed on the manifest by the forms printer.

**Item 5. Generator's Mailing Address, Phone Number and Site Address**

Enter the name of the generator, the mailing address to which the completed manifest signed by the designated facility should be mailed, and the generator's telephone number. Note, the telephone number (including area code) should be the normal business number for the generator, or the number where the generator or his authorized agent may be reached to provide instructions in the event the designated and/or alternate (if any) facility rejects some or all of the shipment. Also enter the physical site address from which the shipment originates only if this address is different than the mailing address.

**Item 6. Transporter 1 Company Name, and U.S. EPA ID Number**

Enter the company name and U.S. EPA ID number of the first transporter who will transport the waste. Vehicle or driver information may not be entered here.

**Item 7. Transporter 2 Company Name and U.S. EPA ID Number**

If applicable, enter the company name and U.S. EPA ID number of the second transporter who will transport the waste. Vehicle or driver information may not be entered here.

If more than two transporters are needed, use a Continuation Sheet(s) (EPA Form 8700-22A).

**Item 8. Designated Facility Name, Site Address, and U.S. EPA ID Number**

Enter the company name and site address of the facility designated to receive the waste listed on this manifest. Also enter the facility's phone number and the U.S. EPA twelve digit identification number of the facility.

**Item 9. U.S. DOT Description (Including Proper Shipping Name, Hazard Class or Division, Identification Number, and Packing Group)**

**Item 9a.** If the wastes identified in Item 9b consist of both hazardous and nonhazardous materials, then identify the hazardous materials by entering an "X" in this Item next to the corresponding hazardous material identified in Item 9b.

**Item 9b.** Enter the U.S. DOT Proper Shipping Name, Hazard Class or Division, Identification Number (UN/NA) and Packing Group for each waste as identified in 49 CFR 172. Include technical name(s) and reportable quantity references, if applicable.

**Note:** If additional space is needed for waste descriptions, enter these additional descriptions in Item 27 on the Continuation Sheet (EPA Form 8700-22A). Also, if more than one Emergency Response phone number applies to the various wastes described in either Item 9b or Item 27, enter applicable Emergency Response phone numbers immediately following the shipping descriptions for those Items.

**Item 10. Containers (Number and Type)**

Enter the number of containers for each waste and the appropriate abbreviation from Table I (below) for the type of container.

**TABLE I.—TYPES OF CONTAINERS**

BA = Burlap, cloth, paper, or plastic bags.	DT = Dump truck.
CF = Fiber or plastic boxes, cartons, cases.	DW = Wooden drums, barrels, kegs.
CM = Metal boxes, cartons, cases (including roll-offs).	HG = Hopper or gondola cars.
CW = Wooden boxes, cartons, cases.	TC = Tank cars.
CY = Cylinders.	TP = Portable tanks.
DF = Fiberboard or plastic drums, barrels, kegs.	TT = Cargo tanks (tank trucks).
DM = Metal drums, barrels, kegs.	

**Item 11. Total Quantity**

Enter, in designated boxes, the total quantity of waste. Round partial units to the nearest whole unit, and *do not* enter decimals or fractions. To the extent practical, report quantities using appropriate units of measure that will allow you to report quantities with precision. Waste quantities entered should be based on actual measurements or reasonably accurate estimates of actual quantities shipped. Container capacities are not acceptable as estimates.

**Item 12. Units of Measure (Weight/Volume)**

Enter, in designated boxes, the appropriate abbreviation from Table II (below) for the unit of measure.

**TABLE II.—UNITS OF MEASURE**

G = Gallons (liquids only).	N = Cubic Meters.
K = Kilograms.	P = Pounds.
L = Liters (liquids only).	T = Tons (2000 Pounds).
M = Metric Tons (1000 kilograms).	Y = Cubic Yards.

**Note:** Tons, Metric Tons, Cubic Meters, and Cubic Yards should only be reported in connection with very large bulk shipments, such as rail cars, tank trucks, or barges.

**Item 13. Waste Codes**

Enter up to six federal and state waste codes to describe each waste stream identified in Item 9b. State waste codes that are not redundant with federal codes must be entered here, in addition to the federal waste codes which are most representative of the properties of the waste.

**Item 14. Special Handling Instructions and Additional Information**

1. Generators may enter any special handling or shipment-specific information necessary for the proper management or tracking of the materials under the generator's or other handler's business processes, such as waste profile numbers, container codes, bar codes, or response guide numbers. Generators also may use this space to enter additional descriptive information about their shipped materials, such as chemical names, constituent percentages, physical state, or specific gravity of wastes identified with volume units in Item 12.

2. This space may be used to record limited types of federally required information for which there is no specific space provided on the manifest, including any alternate facility designations; the manifest tracking number of the original manifest for rejected wastes and residues that are re-shipped under a second manifest; and the specification of PCB waste descriptions and PCB out-of-service dates required under 40 CFR 761.207. Generators, however, cannot be required to enter information in this space to meet state regulatory requirements.

**Item 15. Generator's/Officer's Certifications**

1. The generator must read, sign, and date the waste minimization certification statement. In signing the waste minimization certification statement, those generators who have not been exempted by statute or regulation from the duty to make a waste minimization certification under section 3002(b) of RCRA are also certifying that they have complied with the waste minimization requirements. The Generator's Certification also contains the required attestation that the shipment has been properly prepared and is in proper condition for transportation (the shipper's certification). The content of the shipper's certification statement is as follows: "I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations. If export shipment and I am the Primary Exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent." When a party other than the generator prepares the shipment for transportation, this party may also sign the shipper's certification statement as the offeror of the shipment.

2. Generator or Offeror personnel may preprint the words, "On behalf of" in the signature block or may hand write this statement in the signature block prior to signing the generator/offeror certification, to indicate that the individual signs as the employee or agent of the named principal.

**Note:** All of the above information except the handwritten signature required in Item 15 may be pre-printed.

IMPORTANT NOTICE REGARDING THE DISPOSITION OF YOUR USED OIL  
PLEASE SIGN AFTER READING

M.I.S. INC. (used oil transporter) hereby advises CDHS (used oil generator) that CDHS (Generator's) shipment of used oil may be transported to a facility that is required to comply with federal regulations applicable to management of used oil, but is not required to comply with the more stringent requirements applicable to hazardous waste management facilities. California facilities that handle or process used oil are required to meet those more stringent requirements, and some out-of-state facilities that process used oil meet those requirements. Engineering certifications of tank integrity, and financial assurances for closure and accidental releases.

It is lawful to send used oil to out-of-state facilities that comply only with federal used oil management standards and not these more stringent requirements.

RE: Underground Storage Tank Cleanup at City of Desert Hot Springs City Yard at 65810  
Hacienda Ave., Desert Hot Springs

Dear Responsible Parties,

This letter confirms the completion of site investigation and for the underground storage tanks formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquires concerning the former underground storage tanks are greatly appreciated.

Based on the information in the above-referenced file, and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and that no further action related to the petroleum release at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Earl E. Tuntland  
Assistant Environmental Health Administrator

**CASE CLOSURE SUMMARY  
LEAKING UNDERGROUND FUEL STORAGE TANK PROGRAM**

SITE NAME: City of Desert Hot Springs City Yard

SITE NO: 0016118

**V. Local Agency Representative Data**

<b>NAME:</b> Earl Tuntland	<b>TITLE:</b> Asst. Environmental Health Administrator
<b>SIGNATURE:</b> <i>Earl Tuntland</i>	<b>DATE:</b> 8/1/00

**VI. RWQCB Notification**

<b>DATE SUBMITTED TO RWQCB:</b>	<b>RWQCB RESPONSE:</b>
<b>RWQCB STAFF NAME:</b> Abdi Hajle	<b>TITLE:</b> Senior Eng. Geologist
<b>SIGNATURE:</b> <i>Abdi Hajle</i>	<b>DATE:</b> 07/26/2000

**VII. Additional Comments, Data, Etc.**

On February 10, 2000, two tanks and the dispenser were removed. Soil sample results from under the tanks were all ND for TPHg, TPHd, BTEX, and MTBE. Sample results from under the dispenser showed 860 ppm TPHg, 31ppm TPHd, and ND for BTEX and MTBE. The site was placed into LOP.

On June 2, 2000, one geoprobe boring was drilled to 30' before hitting refusal. The original boring had to be moved seven times due to refusal on cobbles and/or boulders. Soil samples were taken every 5'. No TPHg, BTEX, or MTBE was detected in any of the samples.

The consultant is requesting closure based on the apparent limited extent of the contamination beneath the former gasoline dispenser.

PR4-080919-076

Dear: Mr. Azevedo:

We have received your Public Records Act Request for records from Department of Toxic Substances Control.

After a, thorough review of our files we have found that, no such records exist at this office pertaining to the sites/facilities referenced below.

**N/R: 65810 Hacienda Ave., Desert Hot Springs, Riverside, 10 acres of land on five contiguous parcels of land, 663320008, 663320009, 663320011, 663320020 & 663320014**

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. Envirostor can be accessed at:  
<http://www.envirostor.dtsc.ca.gov/public>

Please begin using our email box to request records. These boxes will also allow other regions to provide support regarding PRARs when needed. Please let me know if you have any questions or concerns. All future PRARs (Public Records Act Requests) are to be emailed to:  
[CypressFileRoom@dtsc.ca.gov](mailto:CypressFileRoom@dtsc.ca.gov) and if needed, please continue to fax all requests:(714)484-5318.

If you have any questions, would like further information regarding your request, please contact our Regional Records Coordinator at (714) 484-5336

Sincerely,

*Jone Barrio*

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Dudek & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 86D0-4B2B-8770

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Dudek & Associates (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## Environmental Lien Search Report

# **The NETR Environmental Lien and AUL Search Report**

**FLORA AVENUE AND CHOLLA DRIVE  
DESERT HOT SPRINGS, CALIFORNIA**

**Wednesday, August 28, 2019**

**Project Number: L19-01464**

2055 East Rio Salado Parkway  
Tempe, Arizona 85281

Telephone: 480-967-6752  
Fax: 480-966-9422

# ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

**Thank you for your business**  
Please contact NETR at 480-967-6752  
with any questions or comments

## **Disclaimer - Copyright and Trademark Notice**

# ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental Lien Search Report is intended to assist in the search for environmental liens filed in land title records.

## **TARGET PROPERTY INFORMATION**

### **ADDRESS**

**Flora Avenue and Cholla Drive  
Desert Hot Springs, California**

### **RESEARCH SOURCE**

Source: Riverside County Assessor  
Riverside County Recorder

### **DEED INFORMATION**

Type of Instrument: Quit Claim Deed

Grantor: The City of Desert Hot Springs

Grantee: Redevelopment Agency of the City of Desert Hot Springs

Deed Dated: 09/18/2008  
Deed Recorded: 10/07/2008  
Instrument: 2008-0541582

### **LEGAL DESCRIPTION**

All that certain piece or parcel of land situated and lying in the Northeast Quarter of Section 36, Township 2 South, Range 4 East of the San Bernardino Principal Meridian, Riverside County, State of California

Assessor's Parcel Number(s): 663-320-008

### **ENVIRONMENTAL LIEN**

Environmental Lien: Found  Not Found

### **OTHER ACTIVITY AND USE LIMITATIONS (AULs)**

Other AULs: Found  Not Found

Case Closure Summary for Leaking Underground Storage Tank was filed with the State Water Resources Control Board on 8/5/2000. This is not an Environmental Activity Use Limitation (AUL). Copy is attached.

THENCE CONTINUING NORTHERLY ALONG SAID WEST LINE 120 FEET;

THENCE EASTERLY 166.50 FEET TO A POINT DISTANT NORTHERLY 332.62 FEET FROM THE SOUTH LINE OF SAID NORTHEAST QUARTER;

THENCE SOUTHERLY 120 FEET;

THENCE WESTERLY 166.50 FEET TO THE TRUE POINT OF BEGINNING.

EXCEPT ANY PORTION WHICH MAY LIE WITHIN THE PROPERTY CONVEYED CHARLES H. RIPPS BY TAX DEED RECORDED MAY 3, 2002 AS INSTRUMENT NO. 236212.

ALSO EXCEPT ANY PORTION WHICH MAY LIE WITHIN THE PROPERTY CONVEYED TO THE CITY OF DESERT HOT SPRINGS BY DEED RECORDED JULY 16, 1985 AS INSTRUMENT NO. 155866 AND BY TAX DEED TO THE CITY OF DESERT HOT SPRINGS RECORDED MAY 23, 1988 AS INSTRUMENT NUMBER 136784 AND BY DEED RECORDED JULY 16, 1985 AS INSTRUMENT NO. 155867.

**APN 663-320-011**

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL 1:

THAT PORTION OF THE NORTHEAST QUARTER OF SECTION 36, TOWNSHIP 2 SOUTH, RANGE 4 EAST, SAN BERNARDINO MERIDIAN, IN THE CITY OF DESERT HOT SPRINGS, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT IN THE SOUTHERLY LINE OF SAID NORTHEAST QUARTER DISTANT WESTERLY 1332 FEET FROM THE EAST LINE OF SAID NORTHEAST QUARTER;

THENCE NORTHERLY ALONG THE WEST LINE OF THE EASTERLY HALF OF SAID NORTHEAST QUARTER 92.70 FEET TO THE TRUE POINT OF BEGINNING;

THENCE CONTINUING NORTHERLY ALONG SAID WEST LINE 120 FEET;

THENCE EASTERLY 166.50 FEET TO A POINT DISTANT NORTHERLY 212.62 FEET FROM THE SOUTH LINE OF SAID NORTHEAST QUARTER;

THENCE SOUTHERLY 120 FEET;

THENCE WESTERLY 166.50 FEET TO THE TRUE POINT OF BEGINNING.

PARCEL 2:

AN EASEMENT FOR INGRESS AND EGRESS TO BE USED IN COMMON WITH OTHERS OVER A STRIP OF LAND 20 FEET WIDE ADJOINING SAID LAND ON THE EAST AND EXTENDING SOUTHERLY TO THE SOUTH LINE OF SAID NORTHEAST QUARTER.

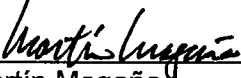

PARCEL 3:

AN EASEMENT FOR INGRESS AND EGRESS TO BE USED IN COMMON WITH OTHERS OVER A STRIP OF LAND 20 FEET WIDE LYING BETWEEN THE SOUTH LINE OF SAID LAND AND THE SOUTH LINE OF SAID NORTHEAST QUARTER, THE EAST LINE OF SAID STRIP BEING THE SOUTHERLY PROLONGATION OF THE EAST LINE OF SAID LAND.

**CERTIFICATE OF ACCEPTANCE**

This is to certify that the interest in real property conveyed by written deed or grant dated June 7, 2016, from the Successor Agency to the Redevelopment Agency of the City of Desert Hot Springs to the City of Desert Hot Springs, is hereby accepted by the undersigned officer or agent on behalf of the City of Desert Hot Springs, pursuant to the authority conferred by the City Council of the City of Desert Hot Springs on June 7, 2016, pursuant to Resolution No. 2016-023, and as confirmed and approved by the Successor Agency to the Redevelopment Agency of the City of Desert Hot Springs on June 7, 2016 pursuant to Resolution No. SA-2016-002, and the City of Desert Hot Springs consents to recordation thereof by its duly authorized officer.

By:   
Martín Magaña  
City Manager  
City of Desert Hot Springs

Provides for:

Address: Cholla Drive

**VII. Additional Comments, Data, Etc.**

On February 10, 2000, two tanks and the dispenser were removed. Soil sample results from under the tanks were all ND for TPHg, TPHd, BTEX, and MTBE. Sample results from under the dispenser showed 860 ppm TPHg, 31ppm TPHd, and ND for BTEX and MTBE. The site was placed into LOP.

On June 2, 2000, one geoprobe boring was drilled to 30' before hitting refusal. The original boring had to be moved seven times due to refusal on cobbles and/or boulders. Soil samples were taken every 5'. No TPHg, BTEX, or MTBE was detected in any of the samples.

The consultant is requesting closure based on the apparent limited extent of the contamination beneath the former gasoline dispenser.

**TABLE 3  
TRIP GENERATION RATES / FORECASTS  
FOR DESERT HOT SPRINGS GROCERY OUTLET PROJECT**

ITE Code	Description	Quantity	Trips per Unit						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
<i>Phase 1: Gasoline w C Store and Car Wash plus Fast Food</i>									
854	<i>Discount Supermarket Rates</i>	ksf	90.87	58%	42%	2.53	50%	50%	8.38
	<i>Grocery Outlet Store in Desert Hot Springs</i>	20.0 ksf	1,817	29	22	51	84	84	168
	Pass-by (23% daily, a.m. and p.m.)		418	7	5	12	19	19	38
	<b>Net New Trips</b>		<b>1,399</b>	<b>22</b>	<b>17</b>	<b>39</b>	<b>65</b>	<b>65</b>	<b>130</b>

**Trip Distribution.** The geographic distribution of vehicle trips associated with the proposed project has been determined from review of the general demographics of the Desert Hot Springs area. The project is located at the south end of the community, but residents of portions of the unincorporated area of Riverside County north of Interstate 10 will also be potential customers. Table 4 indicates the assumed directional allocation of new trips.

As noted earlier a share of the trips attracted to retail uses are commonly “pass-by” trips drawn from the stream of traffic on adjoining streets. This analysis assumes that the share of pass-by trips will be in proportion to the volume of traffic on each facility, and Table 4 also notes the allocation of pass-by trips to and from each street.

<b>TABLE 4 DESERT HOT SPRINGS GROCERY OUTLET STORE TRIP DISTRIBUTION ASSUMPTIONS</b>			
<b>Direction</b>	<b>Route</b>	<b>Percentage of Total Trips</b>	
<i>New Trips</i>			
North	Palm Drive beyond Two Bunch Palms Trail	37½ %	
	Two Bunch Palms Trail west of Palm Drive	12½ %	
	Two Bunch Palms Trail east of Palm Drive	22½ %	
East	Park Lane east of Palm Drive	2½ %	
South	Palm Drive beyond Camino Campanero	17½ %	
	Camino Campanero east of Palm Drive	7½ %	
Total		100%	
<i>Pass By Trips</i>			
<b>Direction</b>		<b>AM Peak Hour</b>	<b>PM Peak Hour</b>
Southbound on Palm Drive		50%	50%
Northbound on Palm Drive		50%	50%
Total		100%	100%

**Trip Assignment.** Figure 4 illustrates “project only” trips through study area intersections and at project driveways under the distribution percentages noted above with access as proposed. Initially the analysis considers full access at both driveways to assess the need for the traffic signal that is anticipated at the Park Lane intersection and the elimination of outbound left turns at the northern driveway

**Project Improvements.** The project would typically be required to install frontage improvements along Palm Drive required by the City of Desert Hot Springs and represent ½ the ultimate section of the road.
