

Update from Councilor Bartley, re: item 11, PVTA bus stop pad

Starting last summer, we've had some really good (off-line) meetings in person as well as numerous emails and here's where we are:

- a. The city has demolished the existing concrete foundation and installed a new Pad
- b The city installed support beams in back of the new foundation to prevent a recurrence of cars crashing into the shelter
- c. The PVTA has identified a new shelter it will install; it should include a bench
- d. The PVTA has identified a budget for labor
- e. The PVTA is waiting to identify a labor crew to do the work

IMHO, we can call this complied with pending final installation. Though I didn't sign onto this order I can pretty much say I carried the ball to the goal-line. I just need to get PVTA to get us across. In any event, this is a great order and compliments to the makers, the DPW, the City Engineer and PVTA for the collaborative effort. Definitely a team effort and I think a great win for us all.
