TO THE WATER CUSTOMERS OF THE CITY OF JARRELL

On May 21, 2021 the City of Jarrell will be changing the disinfectant that we use from chlorine to chloramines. This change is intended to benefit our customers by reducing the levels of disinfection by-products to the system, while still providing protection from waterborne disease.

However, the change to chloramines can cause problems to persons dependent on dialysis machines. A condition known as hemolytic anemia can occur if the disinfectant is not completely removed from the water that is used for the dialysate. Consequently, the pretreatment scheme used for the dialysis units must include some means, such as a charcoal filter, for removing the chloramine prior to this date. Medical facilities should also determine if additional precautions are required for other medical equipment. In addition, chloraminated water may be toxic to fish. If you have a fish tank, please make sure that the chemicals or filters that you are using are designed for use in water that has been treated with chloramines. You may also need to change the type of filter that you use for fish tanks.

When chloraminated water first flushes out the chlorinated water, there may be a slight taste and/or odor, and possibly discoloration for a short period of time. This will not compromise the safety of the water.

For any questions, please contact City Hall at (512) 746-4593 ext 120.
