Attention: Mr. Stefan Horstschaer

Subject: **THE RESERVE**
5780 Rocklin Road, Loomis, California
Phase I Environmental Site Assessment

As requested, Youngdahl Consulting Group, Inc. (Youngdahl) has performed a Phase I Environmental Site Assessment (Phase I ESA) for The Reserve located at 5780 Rocklin Road in Loomis, California (Subject Property). **The following recognized environmental conditions were identified in connection with the Subject Property:**

- On-site concerns were noted from the potential presence of lead from lead-based paint that may have been used in the construction and/or maintenance of the western structures and the Quonset hut on the eastern portion of the Subject Property.
- On-site concerns were noted from the potential presence of organochlorine pesticides that may have been applied as termiticides in surface soils in the vicinity of the western structures and the eastern residence.
- On-site concerns were noted from the potential presence of organochlorine pesticides, lead, and arsenic that may have been applied to the orchard on the northern portion of the Subject Property.
- There is a potential that aerially deposited lead from the historical use of leaded gasoline has impacted the soil around Rocklin Road on the northern portion of the Subject Property.
- On-site concerns were noted from the presence of a pole-mounted transformer on the northern property boundary and the potential that older transformers contained polychlorinated biphenyls (PCBs).
- On-site concerns were noted from the presence of a soil stockpile observed on the western portion of the Subject Property. The current owner of the parcel indicated that the soil was placed on the Subject Property in 2007 and originated from a site to the north. The lack of historical information regarding the origin of the soil piles is a recognized environmental condition.

Furthermore, no historical RECs (HRECs), controlled RECs (CRECs), or de minimis conditions (DMCs) were identified in connection with the property.

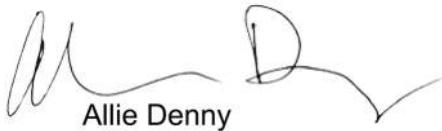

This Phase I Environmental Site Assessment has been completed in accordance to the ASTM Practice E1527-21. Youngdahl Consulting Group, Inc. declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10(b). We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

YOUNGDAHL
CONSULTING GROUP, INC.

Regards,
Youngdahl Consulting Group, Inc.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
THE RESERVE
PLACER COUNTY APN 045-161-033
LOOMIS, CALIFORNIA 95650**

EXECUTIVE SUMMARY

Subject Property Description

The property description referred to herein is based on a Placer County Assessor's Parcel Map and on a site reconnaissance performed by representatives of Youngdahl Consulting Group, Inc. (Youngdahl). These were also the basis for the "Vicinity Map" - Figure 1 and is referred to in this Phase I ESA as the Subject Property. This Phase I Environmental Site Assessment (ESA) has been prepared for The Reserve located at 5780 Rocklin Road in Loomis, Placer County, California (herein referred to as Subject Property). The Subject Property consists of 26.29 acres of vacant land, and is assigned Placer County Assessor's Parcel Number (APN) 045-161-033.

The review of historical records indicates that the Subject Property was wooded land with Rocklin Road and an orchard existing on the northern portion from at least 1938. By 1957, a pond was located on the southwestern portion of the Subject Property and by 1966 a small structure was located on the western portion. The orchard was removed and an additional structure was built near the northwest corner by 1984. By 1993, a residence near the northeastern corner and hobby-sized orchards were added and by 2009, a soil stockpile was placed on the western portion of the Subject Property and the hobby-sized orchards and the small structure were removed. The structure on the northwestern corner was removed by 2025.

Adjacent Properties

The northern adjoining property was an orchard from at least 1938. The orchard was removed and a water storage tank was constructed by 1984. The properties to the east of the Subject Property were wooded land or an orchard from at least 1938 until at least 1975 when the orchard was removed. Barton Road has been present since at least 1938. A structure and a small patch of row crops were constructed by 2009 and additional structures were constructed across Barton Road by 2018. The properties to the south and west of the Subject Property have been wooded land from at least 1938. By 1993, construction for a subdivision had begun.

Purpose

This Phase I ESA was conducted according to the American Society for Testing and Materials (ASTM) Designation E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Phase I Standards). The ASTM E1527-21 standards are consistent with the requirements of the All Appropriate Inquiry (AAI) rule in Title 40 of the Code of Federal Regulations (40 C.F.R. § 312.10).

Recognized environmental conditions (RECs) are defined in the ASTM Phase I Standards to mean "(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment."

Historical recognized environmental condition (HREC) is a term used to state that the property has had a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls. The term 'controlled REC' (CREC) describes a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls. De minimis conditions (DMCs) are those situations that do not present a threat to human health or the environment and generally would not be subject to enforcement actions if brought to the attention of the regulating authority.

Summary and Opinion

Two historical structures were identified in aerial photography on the western portion of the Subject Property, and an existing residence and a Quonset hut were observed on the eastern portion. The northern portion of the Subject Property was observed to contain an orchard from at least 1938 until at least 1975. In addition, Rocklin Road has been on the Subject Property since at least 1938. A soil stockpile was observed on the western portion of the Subject Property and there is a lack of information regarding the source of the stockpiled soil.

Based on the above, the following RECs were identified in connection with the Subject Property:

- On-site concerns were noted from the potential presence of lead from lead-based paint that may have been used in the construction and/or maintenance of the western structures and the Quonset hut on the eastern portion of the Subject Property.
- On-site concerns were noted from the potential presence of organochlorine pesticides that may have been applied as termiticides in surface soils in the vicinity of the western structures and the eastern residence.
- On-site concerns were noted from the potential presence of organochlorine pesticides, lead, and arsenic that may have been applied to the orchard on the northern portion of the Subject Property.
- There is a potential that aerially deposited lead from the historical use of leaded gasoline has impacted the soil around Rocklin Road on the northern portion of the Subject Property.
- On-site concerns were noted from the presence of a pole-mounted transformer on the northern property boundary and the potential that older transformers contained polychlorinated biphenyls (PCBs).
- On-site concerns were noted from the presence of a soil stockpile observed on the western portion of the Subject Property. The current owner of the parcel indicated that the soil was placed on the Subject Property in 2007 and originated from a site to the north. The lack of historical information regarding the origin of the soil piles is a recognized environmental condition.

No CRECs, HRECs, or DMCs were identified in connection with the Subject Property.

Recommendations

It is the opinion of Youngdahl Consulting Group, Inc. that soil sampling should be performed around the existing and historical structures, in the historical orchard, around Rocklin Road, from beneath the pole-mounted transformer on the northern portion of the Subject Property, and from the soil stockpile.

Site Assessor

A site reconnaissance visit was conducted on 11 August 2025 by Ms. Allie Denny, Youngdahl Consulting Group, Inc., (916) 933-0633, allie.denny@youngdahl.net.

Significant Data Gaps

According to § 3.3.19 of ASTM Standard E1527-21, a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather such information. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. A significant data gap (ASTM E1527-21 § 3.3.78) is a data gap that affects the ability to identify RECs. It is our opinion that no data gaps or significant data gaps were discovered during preparation of this report.

1.0 INTRODUCTION

1.1 Subject Property

The Reserve, or the property that is the subject of this environmental site assessment and referred to as Subject Property, is located at 5780 Rocklin Road in Loomis, Placer County, California. The Subject Property consists of 26.29 acres of land and has been assigned Placer County Assessor's Parcel Number (APN) 045-161-033.

1.2 Purpose

The User, Premier 40, LLC, requested the completion of the Phase I Environmental Site Assessment (Phase I ESA) per ASTM E1527-21. This Phase I ESA was conducted according to the American Society for Testing and Materials (ASTM) Designation E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Phase I Standards). The ASTM E1527-21 standards are consistent with the requirement of the All Appropriate Inquiry (AAI) rule in Title 40 of the Code of Federal Regulations (40 C.F.R. § 312.10). The ASTM practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

Potential findings per the ASTM Phase I Standards can include recognized environmental conditions (RECs), controlled RECs (CRECs), historical RECs (HRECs), and de minimis conditions (DMCs). A REC is defined in the ASTM Phase I Standards to mean "(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or authorities meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the property to any required controls (for example, activity and use limitations or other property use limitations).

CRECs are a REC affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

A de minimis condition (DMC) is a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor is a controlled recognized environmental condition.

Controlled substances (i.e., illegal drugs) are not included within the scope of this standard. Petroleum products are included within the scope of this practice because they are of concern with respect to many parcels of commercial real estate and current custom and usage is to include an inquiry into the presence of petroleum products when preparing a Phase I ESA for commercial real estate. This practice does not address requirements of any state or local laws or of any federal laws other than the appropriate inquiry provisions of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)'s landowner liability protection. Users are cautioned that federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the property that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance. The scope of this practice includes research and reporting requirements that support the User's ability to qualify for landowner liability protection. As such, sufficient documentation of all sources, records, and resources utilized in conducting the inquiry required by this practice must be provided in the written report.

1.3 Detailed Scope of Services

This scope of services is site specific in that it relates to assessment of environmental conditions on a specific parcel of real estate. The Phase I ESA will be performed by an environmental professional. An environmental professional (EP) is defined as a person meeting the education, training, and experience requirements set forth in 40 CFR § 312.10(b). The scope of services for this Phase I ESA is as follows:

Government Records Review: Standard environmental record sources, including Federal, Tribal, and State lists as well as local sources of environmental records were reviewed. We authorized Environmental Data Resources (EDR) to conduct a search of specified government databases and produce a map-based radius search report which would identify sites within the approximate minimum distances pursuant to the ASTM E1527-21 Standard.

Review of Historical Sources: Historical records that may have been reviewed include, but are not limited to, aerial photographs, fire insurance (Sanborn®) maps, building department records, chain-of-title documents, city directory abstracts, land use records, and USGS Topographic Maps. The AAI rule requires that historical documents be reviewed as far back in time as the property contained structures or the property was used for agricultural, residential, commercial, industrial, or governmental purposes. Under the AAI rule, historical sources of information must be reviewed as far back as 1940. The AAI rule does not specify a research interval for reviewing historical records.

Site Reconnaissance: A site reconnaissance visit was conducted on 11 August 2025 by Ms. Allie Denny, allie.denny@youngdahl.net.

Interviews: Interviews with past and present owners, operators, or occupants were conducted to obtain information indicating RECs in connection with the Subject Property. The User was asked to identify a person with good knowledge of the property (the key site manager). A

Phase I ESA Questionnaire completed by the Owner's representative to facilitate the collection of information is provided in Appendix A. The AAI rule requires interviews be conducted with the current owner(s) and occupant(s) of the Subject Property. The AAI rule also requires that additional interviews be conducted with current and past facility managers, past owners, operators or occupants of the property, and past employees, as necessary to meet the objectives of the AAI rule. The AAI rule allows the environmental professional to determine whether such interviews are necessary.

Interviews with state and/or local government officials to obtain information indicating RECs in connection with the Subject Property were performed.

Identify Significant Data Gaps: If a data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, the environmental professional will give the reasons for their exclusion. If data failure represents a significant data gap, the report shall comment on the impact of the data gap on the ability of the environmental professional to identify recognized environmental conditions. If the data gaps are found, the environmental professional can and does not warrant nor guarantee that no significant events, releases, or conditions arose during the periods of such data gaps.

Evaluation and Report Preparation: The findings, opinions, and conclusions in the Phase I ESA report are supported by documentation. The report: (1) describes all services performed; (2) has a findings section which summarizes known or suspect environmental conditions associated with the property, and which may include recognized environmental conditions, historical recognized environmental conditions, and de minimis conditions; (3) includes Youngdahl Consulting Group Inc.'s opinion(s) of the impact on the property of the known or suspect environmental conditions identified in the findings section as well as the logic and reasoning used in evaluating information collected during the course of the investigation; and (4) includes a conclusions and recommendations section that summarizes the recognized environmental conditions connected with the property and presents recommendations to address those conditions. The report will include an analysis of the relationship of the purchase price of the Subject Property to the fair market value of the property, if it were not contaminated.

Report Shelf Life: Under the AAI rule, a prospective property owner may use a Phase I ESA Report without having to update any information collected as part of the inquiry: (1) if the all appropriate inquiries investigation was completed less than 180 days prior to the date of acquisition of the property or (2) if the Phase I ESA report was prepared as part of a previous all appropriate inquiries investigation and was completed less than 180 days prior to the date of acquisition of the property. A prospective property owner may use a previously conducted Phase I ESA Report: (1) if the Phase I ESA report was prepared as part of a previous all appropriate inquiries investigation for the same property; and (2) if the information was collected or updated within one year prior to the date of acquisition of the property; and (3) certain aspects of the previously conducted report are conducted or updated within 180 days prior to the date of acquisition of the property. These aspects include the interviews; on-site visual inspection; reviews of federal, tribal, state, and local government records; the search for environmental liens; and the declaration by the environmental professional responsible for the assessment or update.

1.4 Significant Assumptions, Limitations, and Exceptions

This report and review of the Subject Property is limited in scope. All appropriate inquiry does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information

and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of the ASTM 1527-21 practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information. The appropriate level of inquiry will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry. This type of investigation is undertaken with the risk that the presence, full nature, and extent of contamination would not be revealed by visual observation and review of available data alone. The findings presented in this report were based on field observations and review of available data. Therefore, the data obtained is clear and accurate only to the degree implied by the sources and methods used. The information presented herewith was based on professional interpretation and on the data obtained.

1.5 Special Terms and Conditions and/or Additional Services

A Phase I ESA meeting or exceeding the ASTM 1527-21 practice and has all components completed less than 180 days prior to the date of acquisition (the date on which a person acquires title to the Subject Property) or the date of the intended transaction is presumed to be valid. If within this period the assessment will be used by a different user than the User for whom the assessment was originally prepared, the subsequent user must also satisfy the User's Responsibilities set forth in Section 2.0. Users and environmental professionals may use information in prior Phase I ESAs provided such information was generated as a result of procedures that meet or exceed the requirements of ASTM 1527-21.

1.6 Reliance

This Phase I ESA has been prepared for and is intended for the use of Premier 40, LLC. The individual components of this report are valid as of the date they were produced or completed; the report should not be relied upon for information concerning changes in the condition of the property after the report was prepared.

2.0 USER RESPONSIBILITIES

The User should provide reasonably ascertainable land title records and judicial records for review for the existence of environmental liens, activity and use limitations (AUL), or other property use limitation, if any, that are currently recorded against the property. An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§ 9607(1) & 9607(r) and similar state or local laws. AULs are an explicit recognition by a federal, tribal, state, or local regulatory agency that residual levels of hazardous substances or petroleum products may be present on a property, and that unrestricted use of the property may not be acceptable. Property use limitations are a limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous substances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria. If the user is aware of any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional, and before the site reconnaissance is conducted.

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated, and make a written record of such explanation. If the User is aware of any commonly known or reasonable ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the user's responsibility to communicate such information to the environmental professional before the site reconnaissance is conducted. Mr. Stefan Horstschaer, Premier Homes, completed a User Questionnaire on 5 August 2025, which is provided in Appendix A. A summary of his responses is provided below.

2.1 Environmental Liens, Activity and Use Limitations, and/or other Property Use Limitations

Mr. Horstschaer did not indicate any knowledge of environmental liens or activity and use limitations on the completed questionnaire.

2.2 Specialized Knowledge and Commonly Known or Reasonably Ascertainable Information

Mr. Horstschaer did not indicate specialized knowledge of the Subject Property on the completed questionnaire.

2.3 Valuation Reduction for Environmental Issues

Mr. Horstschaer marked "No" to the question regarding valuation reduction on the completed questionnaire.

3.0 SUBJECT PROPERTY INFORMATION

3.1 Subject Property Description

The property description referred to herein is based on a Placer County Assessor's Parcel Map and on a site reconnaissance performed by representatives of Youngdahl Consulting Group, Inc. (Youngdahl). These were also the basis for the "Vicinity Map" - Figure 1. The Subject Property consists of 26.29 acres of land and is assigned Placer County Assessor's Parcel Number (APN) 045-161-033 in Loomis, California.

3.2 Physical Setting

Geologic maps and a current United States Geologic Survey (USGS) 7.5 Minute Topographic Series Map of the Rocklin Quadrangle, as well as observations made during our site reconnaissance were used to make interpretations regarding the physical setting of the Subject Property and the surrounding area. The elevation at the Subject Property ranges between approximately 350 and 400 feet above mean sea level (MSL) and is located in Township 11 North, Range 7 East, Section 21, Mount Diablo Base & Meridian.

3.3 Regional Geology

The Subject Property is located in Loomis, California, which borders the Sierra Nevada and Great Valley geomorphic provinces. According to the Preliminary Geologic Map of the Sacramento 30' x 60' Quadrangle, California (Gutierrez, 2011), the Subject Property is underlain by the Penryn Pluton. The Penryn Pluton is an Upper Jurassic granodiorite intrusive body that intruded into older metamorphic rock.

3.4 Groundwater Conditions

The Subject Property is located within the California Department of Water Resources (DWR) defined Sacramento River Hydrologic Region. Youngdahl reviewed information provided on the Department of Water Resources (DWR) Well Completion Report Map Application. According to a well completion report dated 3 September 2018 for a well located approximately 0.22 miles to the east of the Subject Property, the depth to first water was at 100 feet below the ground surface (bgs) with a static water level at 70 feet bgs. Groundwater flow direction was estimated from topographic contours on the 7.5 Minute Map of the Rocklin Quadrangle to be generally southwest towards the pond in the southwestern corner of the Subject Property.

3.5 Soil Conditions

The United States Department of Agriculture Natural Resources Conservation Service's Web Soil Survey was accessed on 15 August 2025. Soils present on the Subject Property include:

- **93.3% Andregg Coarse Sandy Loam, 2 to 9 percent slopes (Map Unit Symbol 106)**
Parent material is residuum weathered from granite, the unit is well drained, has a low runoff class, and is farmland of statewide importance.
- **6.7% Andregg Coarse Sandy Loam, 9 to 15 percent slopes (Map Unit Symbol 107)**
Parent material is residuum weathered from granite, the unit is well drained, has a low runoff class, and is farmland of statewide importance.

4.0 SITE RECONNAISSANCE

4.1 Purpose

A reconnaissance of the Subject Property and a windshield survey of the surrounding area were conducted by Youngdahl Consulting Group, Inc. on 11 August 2025. The Subject Property was visually and/or physically observed including the periphery of the Subject Property, interior of the Quonset hut and exterior of all structures at the Subject Property, and all adjacent properties. Views of the Subject Property at the time of the reconnaissance visit are presented as Figures 3 - 10.

4.2 Subject Property

Some features discussed in this section are shown on the Site Plan – Figure 2. The Subject Property consists of an existing single-family home (Fig. 7, Photo 9), a Quonset hut (Fig. 9, Photo 13), and two metal storage containers (Fig. 7, Photo 10). Two fuel containers were observed within the residence garage and several 5-gallon paint buckets were observed within the metal storage containers and near the residence. Rocklin Road was observed to run generally east-west through the northern portion of the Subject Property (Fig. 10, Photo 16). A pond was observed at the southwestern corner (Fig. 6, Photo 7) and a soil stockpile was observed to the north of the pond (Fig. 9, Photo 14). A septic system was observed to the north of the existing residence and a well was observed on the western portion of the Subject Property (Fig. 10, Photo 15). A pole-mounted transformer was observed on the northern property boundary.

Reconnaissance Item	Observed	Reconnaissance Observations (11 August 2025)
Structures	Yes	A single-family home and a Quonset hut.
Liquid Storage Systems (UST/AST)	No	None Observed.

Reconnaissance Item	Observed	Reconnaissance Observations (11 August 2025)
Drums	No	None Observed.
Other Containers	Yes	Fuel containers were observed within the garage and several paint buckets were observed in the metal storage containers and near the existing residence.
PCBs	No	A pole-mounted transformer was observed on the northern property boundary.
Pits/Ponds/Ditches/Caves/Streams/Lagoons	Yes	A pond was observed at the southwest corner of the Subject Property.
Stained Soil/Pavement	No	None Observed.
Stressed Vegetation	No	None Observed.
Solid Waste (Mounds or depressions)	No	None Observed.
Waste Water (Discharge into drain/ditch/injection system/stream/adjacent property)	No	None Observed.
Wells (Dry/irrigation/injection/abandoned)	Yes	A private well was located near the western property boundary.
Other underground systems	No	None Observed.
Septic Systems	Yes	A septic system was observed to the north of the existing residence.

4.3 Adjacent Properties

North: A water storage tank and vacant land.

East: Vacant wooded land, Barton Road, and single-family residences.

South: Single-family residences.

West: Single-family residences.

5.0 HISTORICAL SOURCES REVIEW

All obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. The term "developed use" includes agricultural uses and placement of fill dirt. Standard historical sources shall be reviewed at approximately five-year intervals. In an effort to fulfill due diligence requirements, Youngdahl Consulting Group, Inc. employed the services of Environmental Data Resources, Inc. (EDR) to provide the following standard historical sources: aerial photographs, USGS topographic maps, local city directories, and fire insurance maps (Sanborn Maps). Standard historical sources may also include: property tax files, recorded land title records, building department records, and zoning/land use records.

5.1 Aerial Photographic Review

Aerial photographs for the years 1938, 1952, 1957, 1962, 1966, 1972, 1975, 1984, 1993, 1999, 2009, 2012, 2014, 2018, and 2022 were provided in the EDR Aerial Photo Decade Package (Appendix B). Interpretations were made in an effort to evaluate former uses of the Subject Property and adjacent areas, and to determine if any significant topographic or cultural changes

have occurred. All photographs were provided at a scale of 1" = 500'. Youngdahl reviewed aerial imagery available on Google Earth for significant changes to the Subject Property and vicinity. A summary of the photographs reviewed is provided below.

Date	Source	Subject Property	Adjoining Properties
September 1938	USDA	The Subject Property appears to be wooded land with some drainages visible. Rocklin Road runs through the northern portion of the Subject Property and an orchard is located on the northern portion of the Subject Property.	North: An orchard. East: Wooded land, Barton Road, and an orchard. South: Wooded land with trail roads. Bodies of water likely associated with mining activities are visible. West: Wooded land.
July 1952	USGS	Trail roads are visible within the Subject Property and the Subject Property has been partially cleared of trees.	North: No significant changes are visible. East: Many of the trees in the formerly wooded area have been cleared. South: Structures are visible and many trees have been cleared. The bodies of water are no longer visible. West: Many of the trees have been cleared.
August 1957	USDA	A pond is located in the southwest corner.	North and East: No significant changes are visible. South and West: The pond continues onto the southern and western adjoining properties.
July 1962	USGS	No significant changes are visible.	No significant changes to the adjoining properties are visible.
August 1966	USGS	A small structure is visible on the western portion of the Subject Property.	No significant changes to the adjoining properties are visible.
July 1972	USDA	No significant changes are visible.	No significant changes to the adjoining properties are visible.
August 1975	USGS	No significant changes are visible.	East: The orchard appears to have been removed. North, South, and West: No significant changes are visible.
June 1984	USDA	A structure is visible on the northwest portion of the Subject Property. The orchard on the northern portion of the Subject Property has been removed. Construction is visible near the northeastern corner.	North: The orchard has been removed and a water storage tank has been constructed. East, South, and West: No significant changes are visible.

Date	Source	Subject Property	Adjoining Properties
May 1993	USGS/ DOQQ	A structure is visible on the northeastern portion of the Subject Property. Hobby sized orchards are visible in the northwest and northeast corners.	North and East: No significant changes are visible. South and West: Roads and structures associated with a subdivision have been constructed.
1999	USGS/ DOQQ	No significant changes are visible.	North and East: No significant changes are visible South and West: Additional structures are visible.
2009	USDA/ NAIP	The hobby sized orchards have been removed and the small structure on the western portion of the Subject Property is no longer visible. A soil stockpile is visible on the western portion of the Subject Property. A driveway associated with the northeastern structure has been paved.	North: A residence is under construction. East: A structure and a small patch of row crops are visible. South and West: Additional structures are visible.
2012	USDA/ NAIP	No significant changes are visible.	No significant changes to the adjoining properties are visible.
2014	USDA/ NAIP	No significant changes are visible.	No significant changes to the adjoining properties are visible.
2018	USDA/ NAIP	No significant changes are visible.	East: Single family residences have been constructed. North, South, and West: No significant changes are visible.
2022	USDA/ NAIP	A new structure or RV is visible on the northeastern portion of the Subject Property.	East: An additional structure is visible. North, South, and West: No significant changes are visible.
April 2025	Google Earth	The structure on the northwestern portion of the Subject Property has been removed. The second structure on the northeastern portion has been removed and two storage boxes are visible near the residence.	No significant changes to the adjoining properties are visible.

5.2 Review of Historical and Current USGS Topographic Maps

A topographic map is a color-coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topographic maps show the shape, elevation, and development of the terrain in precise detail by using contour lines and color-coded symbols. The EDR Historical Topographic Map Report (Appendix B) provided maps dated 1891 to 2021. Interpretations were made in an effort to evaluate former uses of the Subject Property and adjacent areas, and determine if any significant topographic or cultural changes have occurred.

Date	Map Name	Series	Comments
1891	Sacramento	30-Minute	A roadway is shown running through the northern portion of the Subject Property. A drainage features runs along the northwestern corner of the Subject Property and additional drainage features are shown to the north and south. A roadway is shown along the eastern property boundary.
1892	Sacramento	30-Minute	No significant changes to the Subject and adjacent properties are shown.
1893	Sacramento	30-Minute	No significant changes to the Subject and adjacent properties are shown.
1944	Auburn	15-Minute	The roadway running through the northern portion of the Subject Property and the roadway along the eastern property boundary are depicted as secondary highways. Dredge tailings are shown to the east and southwest.
1947	Auburn	15-Minute	No significant changes to the Subject and adjacent properties are shown.
1954	Rocklin	7.5-Minute	An unimproved road is shown in the southeast and southwest corners of the Subject Property. Orchards are shown on the northern and eastern adjoining properties. The tailings to the east and southwest are no longer shown.
1967	Rocklin	7.5-Minute	A pond is shown in the southwest corner of the Subject Property and continues onto the western adjoining property.
1981	Rocklin	7.5-Minute	The unimproved road is now shown to the south and is no longer shown within the southern corners of the Subject Property.
2012	Rocklin	7.5-Minute	Only major roadways, topography, and water features are depicted in this map. The central portion of the Subject Property is depicted as a wooded area. No significant changes to the adjacent property are shown.
2015	Rocklin	7.5-Minute	No significant changes to the Subject and adjacent properties are shown.
2018	Rocklin	7.5-Minute	No significant changes to the Subject and adjacent properties are shown.
2021	Rocklin	7.5-Minute	No significant changes to the Subject and adjacent properties are shown.

5.3 Historical City Directory Abstract Review

EDR provided the EDR-City Directory Image Report for review and a copy is provided in Appendix B. Building directories including city, cross reference and telephone directories were reviewed, if available, at approximately five-year intervals for the years spanning 1971 through 2022.

Address	Date	Directory Listing
5780 Rocklin Road (Subject Property)	1992, 2000, 2005, 2014	Residential

Address	Date	Directory Listing
5820 Rocklin Road (Subject Property)	1986, 1990, 1992, 1995, 2000, 2005, 2010, 2014	Residential
5779 Rocklin Road (Northern Adjoining Property)		Not listed
5470 Barton Road (Northern Adjoining Property)	1971, 1977, 1986, 1990	Residential
5500 Barton Road (Eastern Adjoining Property)		Not listed
5335 Barton Road (Eastern Adjoining Property)	2022	Residential
5341 Barton Road (Eastern Adjoining Property)	2022	Residential

5.4 Certified Sanborn Map Report

No Sanborn Map coverage was identified for the Subject Property.

5.5 Previous Phase I Environmental Site Assessments

A Phase I ESA was prepared by Earthtec, Ltd. (Earthtec), dated 18 February 2008, for the Subject Property and the eastern adjoining property. The report identified a mobile home on the northwest corner of the Subject Property, a residence at the northeast corner, and two metal storage structures to the south of the residence. The report states that the residence was constructed in 1984. Earthtec concluded that no recognized environmental conditions were identified for the Subject Property.

6.0 REGULATORY RECORDS REVIEW

The records review consisted of a review of reasonably ascertainable environmental record sources, physical setting sources, and historical use information that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable record information must be publicly available, obtainable from its source within reasonable time and cost constraints, and be practically reviewable.

6.1 Commercial Database Search Review

In an effort to fulfill due diligence requirements, Youngdahl Consulting Group, Inc. employed the services of Environmental Data Resources, Inc. (EDR) to identify sites listed on regulatory agency databases within approximate minimum search distances from the Subject Property with potential of existing environmental problems. The term "approximate minimum search distances" means the distances within the area which government records must be reviewed pursuant to ASTM Phase I Standards. The term "minimum search distance" is used in lieu of radius as to include irregularly shaped properties. A current EDR Radius Map with GeoCheck® (EDR Report) was provided by EDR on 6 August 2025 (Appendix C). Included in the report are the dates the original government sources were updated and the dates the sources were last updated by EDR, as well as a list of acronyms used by EDR.

Due to poor or inadequate information, EDR is unable to map certain sites. These sites are referred to by EDR as Orphans. Five Orphan sites were identified in the EDR Report.

The Proposed Costco Wholesale Warehouse and Fuel Facility is located 2 miles to the north of the Subject Property. Due to this distance, it is our opinion that this site has not impacted the Subject Property.

The Southern Pacific (Roundhouse) site is located over 2 miles to the west of the Subject Property. Due to this distance, it is our opinion that this site has not impacted the Subject Property.

The Sierra College Surplus Sites East and South were reviewed on the EnviroStor website. Soil contamination was identified on the property and the chemicals of concern listed for the site are arsenic and lead applied as an herbicide and lead from lead-based paint. Because the contamination is limited to the soil and the site is over one-half mile from the Subject Property, it is our opinion that this site has not impacted the Subject Property.

The Bath and Body Works #2663 site is located 2 miles from the to the north of the Subject Property. Due to this distance, it is our opinion that this site has not impacted the Subject Property.

The unnamed orphan site is located 2 miles to the west of the Subject Property. Due to this distance, it is our opinion that this site has not impacted the Subject Property.

City	EDR ID	Site Name	Address	Database(s)
Loomis	S122495077	Proposed Costco Wholesale Warehouse and Fuel Facility	Southeast corner of Brace Road and Sierra College Boulevard	ENVIROSTOR, VCP
Rocklin	1003879731	Southern Pacific (Roundhouse)	Corner of First and Rocklin Road	SEMS-ARCHIVE
Rocklin	S121475152	Sierra College Surplus Sites East and South	Intersection of Sierra College Boulevard and Rocklin Road	ENVIROSTOR, VCP
Rocklin	S129060577	Bath and Body Works #2663	5108 Rocklin Common Drive SPC 101	CERS HAZ WASTE, HWTS
Rocklin	S107540519	Unnamed	Rocklin P.D./4060 Rocklin Road	CDL

A summary table of the sites listed on the databases searched by EDR is provided below. The Subject Property was not listed in the databases reviewed by EDR. A total of 6 sites were identified within minimum search distances of the Subject Property.

Database	Search Distance (Miles)	Target Property	<1/8	1/8 – 1/4	1/4 – 1/2	1/2 – 1	>1	Total Plotted
ENVIROSTOR	1	0	1	0	1	1	NR	3
VCP	0.5	0	0	0	1	NR	NR	1
SCH	0.25	0	1	0	NR	NR	NR	1
CA PLACER CO. MS	0.25	0	1	0	NR	NR	NR	1
Totals		0	3	0	2	1	0	6

6.2 Review of State and/or Local Government Records

The Placer County NextRequest system was utilized to request any records pertaining to hazardous materials at the Subject Property. We were informed that no records for the Subject Property were identified.

The T-Mobile SC09955A site, located at 5779 Rocklin Road, was listed in the Placer County Master List (CA Placer Co. MS) database. The CA Placer Co. MS is a database of all facilities that are regulated, permitted, and/or inspected by the Placer County Environmental Health Department. A listing on this database is not considered to be indicative of a release of a hazardous material or petroleum product at a property. Based on the information reviewed, it is Youngdahl's opinion that this facility has not impacted the Subject Property.

The Loomis Union School District Future School Site, 5500 Barton Road, is located on the eastern adjoining property. This site is listed in the EnviroStor and SCH databases. Youngdahl reviewed records on the EnviroStor website. A Phase I ESA was performed on the site in June 2021 and no RECs were identified on the property. Therefore, it is our opinion that this site has not impacted the Subject Property.

The State of California Water Resources Control Board's GeoTracker database was researched to identify if sites with groundwater contamination exist within the minimum search distances to the Subject Property (www.geotracker.waterboards.ca.gov). Also, the Department of Toxic Substance Control's (DTSC) Envirostor database was researched for sites of environmental concern near or at the Subject Property (<https://www.envirostor.dtsc.ca.gov/public/>). The Subject Property was not identified on the GeoTracker or EnviroStor websites.

6.3 Vapor Encroachment Screening

Vapor intrusion is the term used to describe the migration of volatile organic compounds (VOCs) via soil vapor from the sub-surface soil and/or groundwater upward into buildings, potentially causing unacceptable chemical exposure for building occupants. The vapor intrusion pathway is evaluated using the Conceptual Site Model (CSM) and vapor intrusion pathway screening. Volatilization of petroleum products in the subsurface occurs via the volatilization of constituents that are in the dissolved phase (in pore water or groundwater), volatilization from light nonaqueous phase liquid (LNAPL) (either mobile or residual) directly, and volatilization from impacted soil. Once the individual constituents are in the vapor phase, they can continue to migrate in the vadose zone (soil zone between first groundwater and ground surface). Transport will occur through diffusion caused by concentration gradients. The greatest movement will take place in the most permeable materials. If the soil-moisture content in the vadose zone is high, then relatively soluble compounds such as ethanol and MTBE will tend not to stay in the vapor phase, but rather will stay in the soil moisture.

Soil vapor is one of the pathways of contamination to the Subject Property, along with ground water and soil. ASTM E1527-21 requires that vapor migration be treated no differently than contaminated groundwater. The soil vapor contaminant pathway needs to be considered in evaluation of RECs or other environmental concerns. The ASTM Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions (ASTM E2600-22) is the industry-accepted guidance for using Phase I ESA information to determine if a vapor encroachment condition (VEC) exists at the Subject Property. EDR's Vapor Encroachment Worksheet was designed to assist parties seeking to meet the search requirements of the ASTM E 2600-22. No sites of potential risk were discovered during completion of the EDR VES. A copy of the EDR VES is provided in Appendix D.

6.4 Other Environmental Records

The Department of Conservation Geologic Energy Management Division's Well Finder website was reviewed to identify locations with current or historical hydrocarbon production near the Subject Property. No wells within one-half mile of the Subject Property were identified (CalGEM, 2025).

The Subject Property is located within an area of minimal flood hazard (FEMA, 2025).

Youngdahl reviewed data provided on the National Pipeline Mapping System website and identified one pipeline within one-half mile of the Subject Property. The pipeline runs along Rocklin Road through the northern portion of the Subject Property, then turns south to follow Barton Road and runs along the eastern property boundary. It is noted as being operated by Pacific Gas and Electric, Co. and is reportedly an active natural gas transmission line (NPMS, 2025).

7.0 INTERVIEWS

7.1 Interviews with Past and Present Owners, Key Site Manager, and/or Occupant

Mr. Stefan Horstschaer, Premier Homes, completed a questionnaire regarding the Subject Property on 5 August 2025. A copy of the completed questionnaire is provided in Appendix A. Mr. Horstschaer stated that Premier 40, LLC acquired the Subject Property on 19 August 2021 from Dominican SMME Corporation. He indicated that the current and historical uses of the Subject Property have been for residential purposes and that an existing residence and a demolished mobile home have been located on the Subject Property. Mr. Horstschaer noted the presence of a soil stockpile that he believed was placed in 2007 and was sourced from the construction of a residence to the north. He stated that, to the best of his knowledge, no environmental liens have been recorded for the Subject Property.

7.2 Interviews with State and/or Local Government Officials

The Placer County Environmental Health Department was contacted via email on the Placer County Nextrequest website on 18 August 2025 and was requested to provide records regarding the Subject Property and nearby sites that may be of a concern. We were informed that no records pertaining to the Subject Property were identified.

8.0 COMMON CONTAMINANTS

8.1 Lead-based Paint

Lead is considered to be a harmful environmental pollutant. In late 1991, the Secretary of the Department of Health and Human Services called lead the "number one environmental threat to the health of children in the United States." Humans are exposed to lead through the air, drinking water, food, contaminated soil, deteriorating paint, and dust. Airborne lead enters the body by breathing or swallowing lead particles or dust once it has settled. Old lead-based paint is the most significant source of lead exposure in the U.S. Lead-based paint in the United States resulted in a court case against the Lead Industries Association. Due in great part to studies carried out by Philip J. Landrigan, paint containing more than 0.06% (by weight of dried product) lead was banned for residential use in the United States in 1978 by the U.S. Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303). Most homes and other buildings built before 1960 contain heavily leaded paint. Some homes built as recently as 1978 may also contain lead paint. DTSC implemented an "Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers" in 2006, which stated that schools constructed before 1 January 1993, should be evaluated for the presence of lead-based paint. The historical structures on the western portion

of the Subject Property were present prior to 1978 and the construction date of the Quonset hut is unknown; therefore, there is a potential that lead from lead-paint has impacted the soil around these structures.

8.2 Termiticides

Termiticides - organochlorine termiticides (OC termiticides) are a group of persistent pesticides that were formerly used for termite control in and around wooden structures from the mid-1940s to the late 1980s. These OC termiticides used in the past include chlordane, aldrin, dieldrin, heptachlor, and DDT. Chlordane and other organochlorine pesticides (OCPs) were commonly used as termiticides around structures until 1988. Above-ground use of chlordane was phased out between 1978 and 1983 by the United States Environmental Protection Agency (USEPA); although chlordane was used as a termiticide for wooden structures until it was prohibited in 1988. In 2004, the California Department of Toxic Substances Control (DTSC) evaluated OCPs in soil for proposed school sites on residential properties; finding chlordane in 98 percent of the samples, DDT in 95 percent, dieldrin in 71 percent, and heptachlor in 17 percent. DTSC implemented an "Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers" in 2006. The existing residence and the two historical structures on the western portion of the Subject Property were present prior to 1988; therefore, there is potential that organochlorine pesticides as termiticides were applied to soils around these structures. The Quonset hut is constructed out of metal, therefore OCPs applied as termiticides are not of concern around the structure.

8.3 Pesticides

Prior to 1950, the use of arsenical pesticides and herbicides as lead arsenate (LA) was the most extensively used of the arsenal insecticides. The search for substitutes for LA began when it was discovered in 1919 that contemporary practices for washing produce were failing to adequately remove arsenic residues (Shepard, 1939). Unfortunately, all of the tested alternative materials were found to provide less effective insect control or were more toxic to plants and animals. No adequate substitutes were found until 1947, when the synthetic organic insecticide dichlorodiphenyltrichloroethane (DDT) was introduced. Lead arsenate use in Washington State, USA, effectively terminated in 1948, when DDT became widely available to the public (Benson et al., 1968). Veneman et al. (1983) stated that LA use ceased in Massachusetts, USA, in the early 1950s. All insecticidal uses of LA in the USA were officially banned on 1 August 1988 (USEPA, 1988), with a comment that all registrations for insecticidal use had lapsed before that date.

Organochlorine pesticides (OCPs) were commonly used in the United States between the 1940s and 1970s for public health vector control, agricultural crop production, and pest control around structures. Although most OCPs were banned or withdrawn from use in the 1970s (including DDT), the compounds remain in the environment where surface soils associated with historical agricultural and termite control pesticides are present (DTSC, 2010). Based on aerial photography, an orchard was present on the northern portion of the Subject Property from at least 1938 and was removed by 1984. There is a potential that organochlorine pesticides, lead, and arsenic that may have been applied to the orchard on the northern portion of the Subject Property.

8.4 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls, or PCBs are a series of chemicals typically used as a heat transfer media, plasticizer, and other industrial uses. Due to PCBs having a high chemical and thermal stability and low solubility, they persist in the environment for decades and can become mobile

readily as they bind strongly to soils and travel via surface and groundwater. PCBs have been identified as probable human carcinogens and may cause a variety of non-cancer health effects. They are typically found in capacitors, electrical transformers, fluorescent light ballasts, and other equipment. As a plasticizer, it can also be found in caulking, mixed with polyvinyl chloride (PVC) plastic, neoprene, laminating, adhesives, sealants, paints, concrete, and other building materials. The EPA has recently raised awareness that schools and large apartment complex buildings constructed or renovated between 1950 and 1979 may have widespread occurrence of PCBs in caulk and other building material. The DTSC "Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers" recommends soil sampling in the vicinity of historical or current transformers that were installed before January 1, 1979. A pole-mounted transformer was observed along the northern boundary of the Subject Property. There is a potential that older transformers contained polychlorinated biphenyls (PCBs), which may have impacted the soil beneath the transformer.

8.5 Fill Dirt and/or Solid Waste

Fill dirt is defined by ASTM E1527-21 as: *"dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities."* This differs from the definition of solid waste, which is considered areas filled or graded by non-natural causes (or filled by fill of unknown origin) suggesting trash construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting trash or other solid waste disposal. Stockpiled soil was observed on the western portion of the Subject Property. The current owner of the parcel indicated that the soil was placed on the Subject Property in 2007 and originated from a site to the north. The lack of historical information regarding the origin of the soil piles is a recognized environmental condition.

8.6 Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS)

Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) are a group of thousands of chemicals that have been used in industry and consumer products since the 1940s. PFAS are referred to as "forever chemicals" because they contain carbon-fluorine bonds, which do not degrade easily in the environment. They are found in the manufacturing of cleaning products, water and stain resistant fabrics, nonstick cookware, food packaging and personal care products. In addition, PFAS compounds have been used in fire-fighting foams. The US Environmental Protection Agency has amended the Toxic Substances Control Act (TSCA) regulation with reporting and recordkeeping requirements for PFAS, which applies to anyone that manufactured or imported PFAS for a commercial purpose since 1 January 2011. EDR has begun to aggregate databases with listings for facilities where PFAS were reported or suspected to be used.

No listings were identified on PFAS databases searched by EDR (See Section 6.1).

The Subject Property owner indicated that they are not aware of the use of PFAS compounds on the Subject Property.

Youngdahl did not identify any historical information to indicate that products that may have contained PFAS were manufactured on the Subject Property. In addition, no information was located that indicated a fire had occurred on the Subject Property that may have included the use of firefighting foam.

8.7 Aerially-Deposited Lead (ADL)

Beginning in the 1920s, refiners began adding lead compounds to gasoline to reduce engine "knock" and allow higher engine compression. This would cause leaded gasoline engines to disperse lead-contaminated emissions along roadways, contaminating roadside soils and medians. Lead gasoline use diminished when the U.S. Environmental Protection Agency (EPA) established rules requiring unleaded gasoline to be used in new cars due to the introduction of catalytic converters, which control emissions; lead within the gasoline would destroy emission control capacity of the catalytic converters. By the early 1980s, gasoline lead levels declined by about 80%, and beginning in 1992, lead was banned as a fuel additive in California. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. The highest lead concentrations are usually found within 10 feet of the edge of the pavement and within the top six inches of the soil; it can be found within 30 feet of the edge of pavement, and in some cases, as deep as two to three feet below the surface. Rocklin Road runs through the northern portion of the Subject Property and has been present since at least 1938. Therefore, there is a potential that aerially deposited lead from the historical use of leaded gasoline has impacted the soil along Rocklin Road.

9.0 COMMON NON-SCOPE CONSIDERATIONS

Non-scope services include potential environmental conditions that may be present at the Subject Property that do not present potential CERCLA liability, and are beyond the scope of this practice. We have provided information regarding some non-scope items that may arise at the Subject Property below.

9.1 Regional Radon Values

Elevated radon gas levels in indoor air are a result of radon moving into buildings from the soil, either by diffusion or flow due to air pressure differences. The ultimate source of radon gas in buildings is the uranium naturally present in rock, water, and soil. Some rock types are known to contain more uranium than others. In California, most uranium deposits are relatively small in aerial extent and are located in rural areas. Consequently, the chance of severe radon levels (>200 Picocuries per Liter) occurring in buildings in California should be very low. The following rock units in California contain uranium in concentrations above the crustal average: the Monterey Formation, asphaltic rocks, marine phosphatic rocks, granitic rocks, felsic volcanic rocks, and certain metamorphic rocks. According to EPA publication 402-R-93-025, entitled EPA's Map of Radon Zones, California, dated September 1993, Placer County is shown to be in Zone 2. Zone 2 has a predicted average radon screening level of greater than or equal to 2 pCi/L and less than or equal to 4 pCi/L; this is considered to be an area of moderate potential for geologic radon.

The California Department of Health Services, California Indoor Radon Levels Sorted by Zip Code was last updated February 2016. The number of tests does not necessarily represent the number of houses tested. A single house may have had several tests conducted. The table contains both long-term and short-term indoor radon measurements. The California Department of Health Services recommends that you take action to reduce radon levels in your house if they are 4pCi/L or greater. Of the 91 tests conducted for Zip Code 95650, 3 were equal to or greater than 4pCi/L.

9.2 Asbestos Containing Building Materials

Asbestos is a set of six naturally occurring silicate minerals used commercially for their desirable physical properties. They all have in common their eponymous, asbestos-form habit: long, thin fibrous crystals. The prolonged inhalation of asbestos fibers can cause serious

illnesses including malignant lung cancer, mesothelioma, and asbestosis. Asbestos became increasingly popular among manufacturers and builders in the late 19th century because of its sound absorption, average tensile strength, its resistance to fire, heat, electrical and chemical damage, and affordability. It was used in such applications as electrical insulation for hotplate wiring and in building insulation. When asbestos is used for its resistance to fire or heat, the fibers are often mixed with cement (resulting in fiber cement) or woven into fabric or mats.

Most products manufactured today do not contain asbestos. In the industrialized world, asbestos was phased out of building products mostly in the 1970s with most of the remainder phased out by the 1980s. Asbestos containing building materials in residences includes a variety of products, such as: stipple used in textured walls and ceilings; drywall joint filler compound; asbestos contaminated vermiculite, vinyl floor tile; vinyl sheet flooring; window putty; mastic; cement board; furnace tape; and stucco. Asbestos was used a lot in roofing materials, mainly corrugated asbestos cement roof sheets and asbestos shingles. Other sources of asbestos containing materials include fireproofing and acoustic materials. On July 12, 1989, EPA issued a final rule banning most asbestos-containing products. In 1991, this regulation was overturned by the Fifth Circuit Court of Appeals in New Orleans. As a result of the Court's decision, the following specific asbestos-containing products remain banned: flooring felt, roll board, and corrugated commercial, or specialty paper. In addition, the regulation continues to ban the use of asbestos in products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos. For buildings constructed prior to 1980 (Code of Federal Regulations 29 CFR 1926.11) all thermal system insulation and surface materials must be designated as presumed asbestos-containing building materials (ACBM) unless proved otherwise through sampling. No structures currently located on the Subject Property were constructed prior to 1980; therefore, it is our opinion that ACBM is not of concern.

9.3 Treated Wood Waste

Wood that has been preserved using chemicals that are meant to protect the wood from insect attack and fungal decay during its use is commonly preserved with hazardous chemicals that pose a risk to human health and the environment. Some of the toxic or carcinogenic chemicals used in the preservation process include arsenic, chromium, copper, creosote, and pentachlorophenol. When this preservative-treated wood has reached the end of its service life, it is considered treated wood waste (TWW) (California Department of Toxic Substances Control, Requirements for Treated Wood Waste, December 2008). If TWW is not properly disposed, the chemicals it contains can leach out of the wood and contaminate surface water and groundwater, posing a risk to human health and the environment. Exposure to the harmful compounds within TWW can occur through dermal contact or from inhalation or ingestion of particles (e.g., sawdust and smoke).

The statute (HSC 25150.7) and regulations (22 CCR 67386.1 et seq.) that allow treated wood waste to be handled with Alternative Management Standards (AMS) expired on December 31, 2020. After that date, all hazardous treated wood waste (not exempted by HSC 25143.1.5 as utility generated) managed in California has to be stored and manifested as hazardous waste and transported to class I hazardous waste landfills for disposal. On August 31, 2021, Assembly Bill 332 had taken affect, adopting new AMS for treated wood waste that are codified in Health and Safety Code section 25230. More information regarding TWW can be found on the September 2021 Fact Sheet – Requirements for Generators of Treated Wood Waste (TWW) (DTSC, 2021). Treated wood waste was not observed on the Subject Property.

9.4 Substances Not Defined as Hazardous Substances

Hazardous substance is defined in ASTM 1527-21 § 3.2.36 as “those substances defined as hazardous substance pursuant to CERCLA 42 U.S.C. § 9601(14), as interpreted by EPA regulations and the courts.” There are some substances that non-environmental professionals and others may assume to be hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA through interpretation by EPA regulations and the courts. These substances may include: (1) some substances that occur naturally through biological digestion (for example, methane), and (2) substances about which human understanding is evolving (for example, per- and polyfluoroalkyl substances, also known as “PFAS”). These and any other “emerging contaminants,” where they are not identified as a hazardous substance by CERCLA, as interpreted by EPA regulations and the courts, are not included in the scope of this practice. Some of these substances may be considered a “hazardous substance” (or equivalent) under applicable state laws. In those instances, where a Phase I ESA is performed to satisfy both federal and state requirements, or as directed by the user of the report, it is permissible to include analysis and/or discussion of these substances in the same manner as any other Non-Scope Consideration.

10.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

This Phase I ESA was performed for The Reserve, located at 5780 Rocklin Road in Loomis, California. The Subject Property is identified by Placer County APN 045-161-033. This Phase I ESA was conducted for Premier 40, LLC. Our study consisted of an environmental record sources review, physical setting sources review, site related documents review, historical use information review, interviews, and a site reconnaissance. We have performed a Phase I ESA in conformance with the scope and limitation of ASTM Standard Practice E 1527-21. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

10.1 Recognized Environmental Conditions (RECs)

Recognized environmental conditions (RECs) are defined in the ASTM Phase I Standards to mean "(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment." **The following recognized environmental conditions were identified in connection with the Subject Property:**

- On-site concerns were noted from the potential presence of lead from lead-based paint that may have been used in the construction and/or maintenance of the western structures and the Quonset hut on the eastern portion of the Subject Property.
- On-site concerns were noted from the potential presence of organochlorine pesticides that may have been applied as termiticides in surface soils in the vicinity of the western structures and the eastern residence.
- On-site concerns were noted from the potential presence of organochlorine pesticides, lead, and arsenic that may have been applied to the orchard on the northern portion of the Subject Property.
- There is a potential that aerially deposited lead from the historical use of leaded gasoline has impacted the soil around Rocklin Road on the northern portion of the Subject Property.
- On-site concerns were noted from the presence of a pole-mounted transformer on the northern property boundary and the potential that older transformers contained polychlorinated biphenyls (PCBs).

- On-site concerns were noted from the presence of a soil stockpile observed on the western portion of the Subject Property. The current owner of the parcel indicated that the soil was placed on the Subject Property in 2007 and originated from a site to the north. The lack of historical information regarding the origin of the soil piles is a recognized environmental condition.

10.2 Historical Recognized Environmental Conditions (HRECs)

Historical recognized environmental conditions (HRECs) are a term used to state that the property has had a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls. **This assessment did not identify any HRECs in connection with the Subject Property.**

10.3 Controlled Recognized Environmental Conditions (CRECs)

The term 'controlled REC' (CREC) describes a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls. **This assessment did not identify any CRECs in connection with the Subject Property.**

10.4 De Minimis Conditions (DMCs)

De minimis conditions (DMCs) are those situations that do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority. **This assessment did not identify any DMCs in connection with the Subject Property.**

10.5 Recommendations

It is the opinion of Youngdahl Consulting Group, Inc. that soil sampling should be performed around the existing and historical structures, in the historical orchard, around Rocklin Road, from beneath the pole-mounted transformer on the northern portion of the Subject Property, and from the soil stockpile.

10.6 Significant Data Gaps

According to § 3.3.19 of ASTM Standard E1527-21, a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. A significant data gap (ASTM E1527-21 § 3.3.78) is a data gap that affects the ability to identify RECs. It is our opinion that no data gaps or significant data gaps were discovered during preparation of this report.

10.6.1 Data Failures

According to § 3.8.6 of ASTM Standard E1527-21, a data failure occurs when all standard historical resources that are reasonably ascertainable have been reviewed but the environmental professional is unable to identify a complete history of the previous uses of the Subject Property. It is our opinion that no data failures occurred during the preparation of this report.

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, the reviewer meets the definition of Environmental professional as defined in § 312.10 of 40 C.F.R. § 312" and 12.14.2. The reviewer has the specific qualifications based on education, training, and experience to

assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

David C. Sederquist, C.E.G., C. HG.

Professional Geologist - California No. 4715; Certified Engineering Geologist, California No. 2133; Certified Hydrogeologist; California No. 619
Bachelor of Arts in Geology; California State University, Sacramento, 1980

Mr. Sederquist has performed Phase I and Phase II Environmental Site Assessments for commercial, residential, public utility and school projects since 1990. He has assessed, monitored, and closed soil and groundwater contamination sites. He is experienced in working closely with both regulatory officials and property owners/purchasers.

Allie Denny

Geologist-In-Training – California GIT No. 1652
Bachelor of Science in Geology; University of California, Los Angeles, 2020

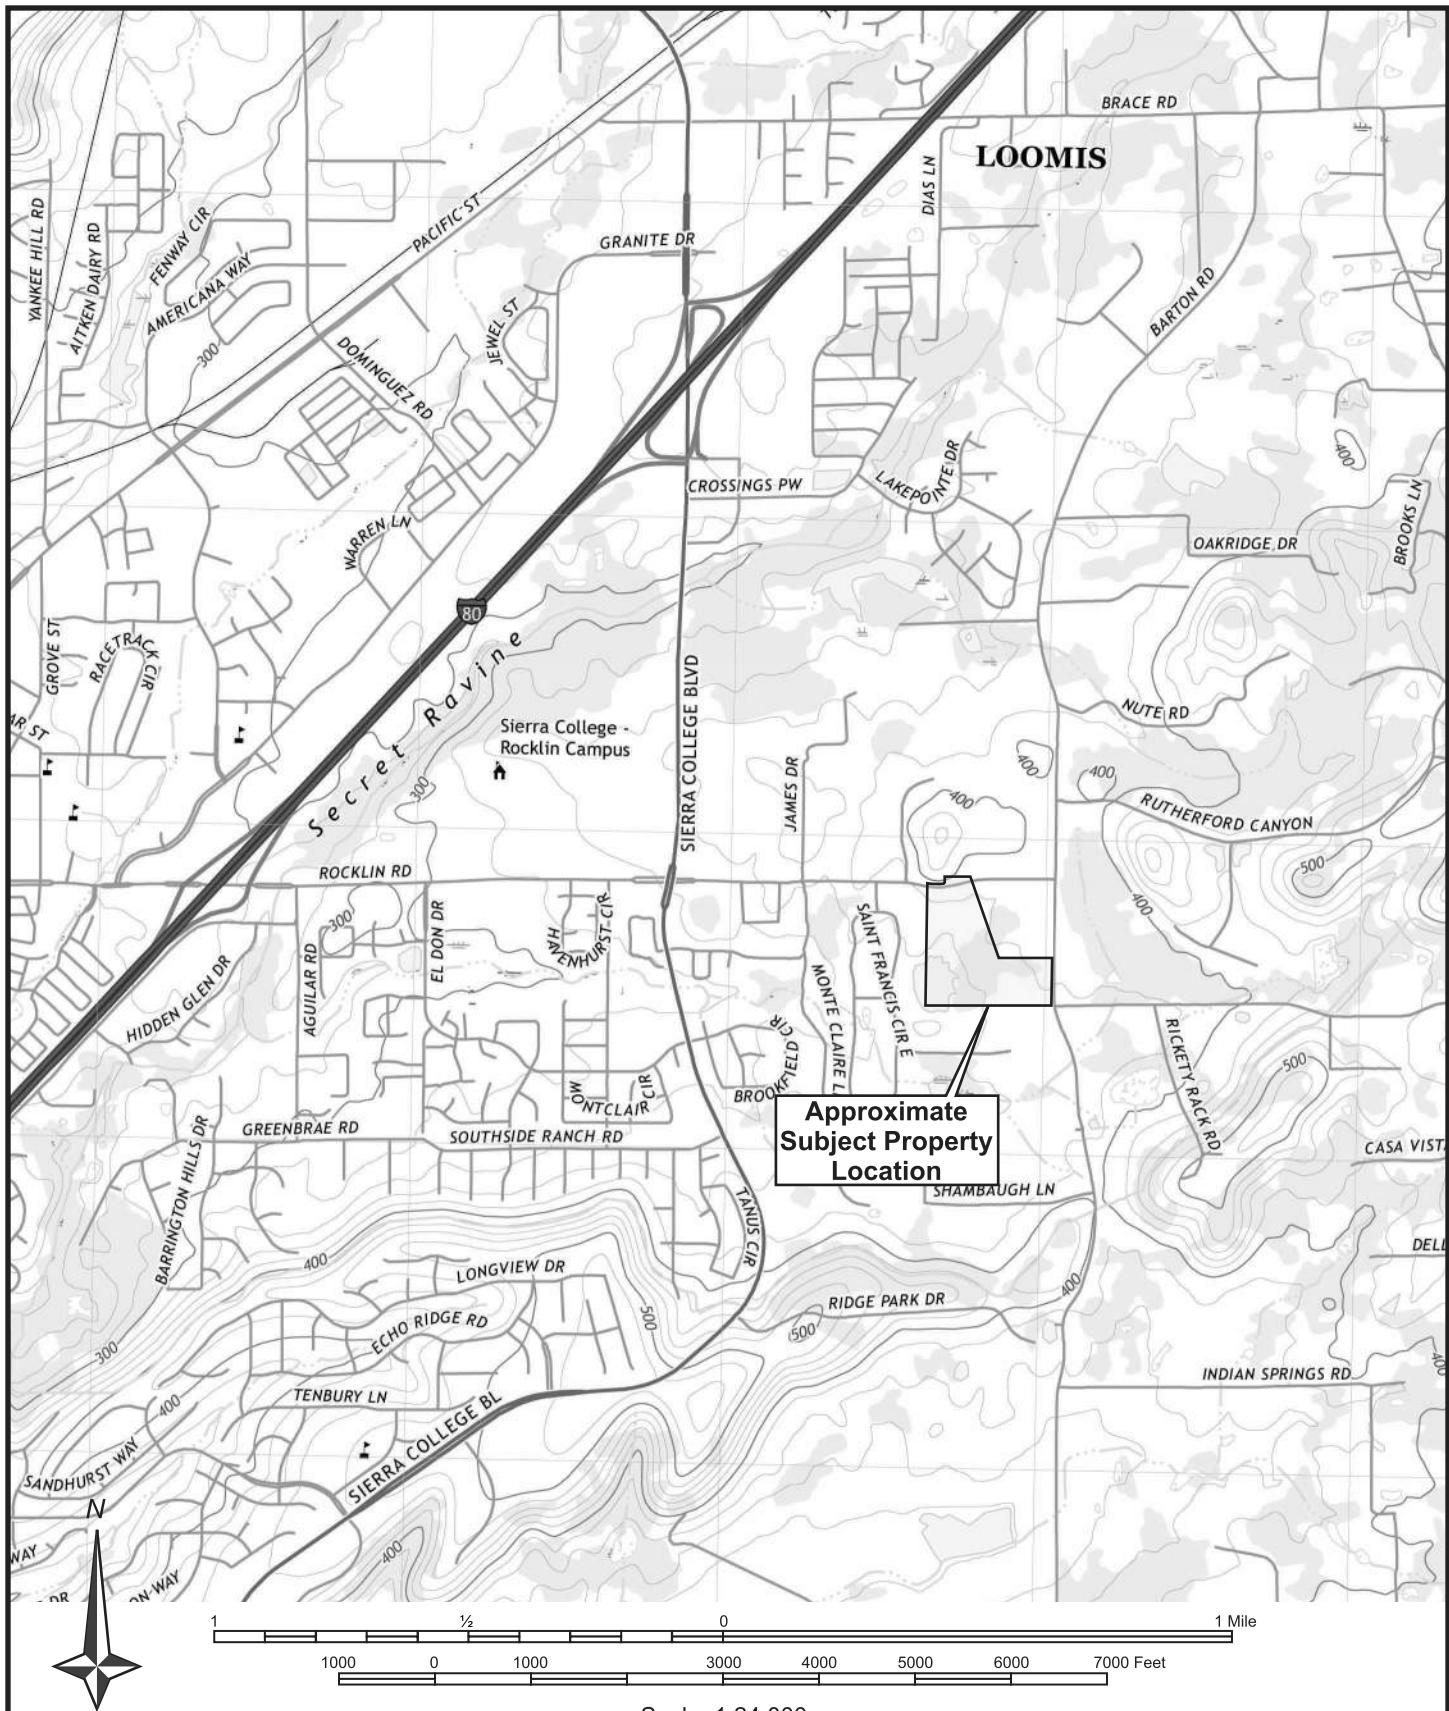

Ms. Denny has performed Phase I and Phase II Environmental Site Assessments in the Sacramento Valley since 2022. She has experience preparing site assessments on a variety of projects including undeveloped land, residential, and commercial properties.

APPENDICES

APPENDIX A
Phase I ESA Questionnaire
User Questionnaire

Project: **Site Name:** Rocklin Road (5780) Phase I ESA
Location: Loomis, California
Placer County APN 045-161-033

Phase I ESA Owner Questionnaire

Please have someone who is knowledgeable regarding the use and condition of the property fill out this questionnaire. We ask that you take time to complete this questionnaire to the best of your knowledge. This information will be used to make determinations regarding the past and present use of the property and will help us provide our opinions regarding the status of the property

We would appreciate it if you would FAX the completed questionnaire as soon as possible to Youngdahl Consulting Group, Inc. FAX: 916-933-6482 or email it to Nancy Malaret at Nancy.Malaret@youngdahl.net or David Sederquist at dcs@youngdahl.net

1. Who owns the Subject Property?

Premier 40, LLC, 8483 Douglas Plaza Drive, Suite 110, Granite Bay, CA 95746

2. How long have you owned/occupied/farmed the Subject Property (give specific dates)?

Since 8/19/2021

3. Who was the Subject Property purchased from?

Dominican SMME Corporation

4. What was the historical use of the Subject Property? If agricultural, please provide types of crops. Please provide relevant dates.

Residential

5. Have there been any structures on the Subject Property? If yes, please list. Please include construction and demolition dates. Can you provide site plans or drawings that show where the structures are or were located?

A main home (still existing) and a (demolished) mobile home. Both visible on overhead imagery.

Requested any past permit records from Town of Loomis. Premier tore down the mobile home a couple of years ago. Also a small quonset hut for storage of a tractor.

6. What is the current use of the Subject Property?

Residential

7. Currently is, or in the past has, the Subject Property or any *adjoining* property been used for an industrial use?

Not to our knowledge

8. Currently is, or in the past has, the Subject Property or any *adjoining* property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?

No

Celebrating 40 Years of Service

1234 Glenhaven Court, El Dorado Hills, CA 95762
4300 Anthony Court, Unit D, Rocklin, CA 95677

P: 916.933.0633
F: 916.933.6482

youngdahl.net

For the following questions, please provide specific information for any "yes" responses.

9. Has any soil been stockpiled on or fill material been brought onto the Subject Property? (Please provide information regarding the origin of any soil or fill dirt that has been imported or stockpiles that are present.)

Yes No Unknown

See Youngdahl soils report. Per Google Earth, the clay soils seem to have been placed in the summer of 2007 concurrent with construction of the large residence to the north on Poppy Ridge Court. We believe the dirt might have been intended to line the bottom of the pond.

10. Are you aware of the use or storage of Per- and Polyfluoroalkyl Substances (PFAS) on the Subject Property? PFAS are commonly used in the manufacturing of water and stain resistant fabrics and materials, cookware, and food packaging. In addition, PFAS are used in fire-fighting foams.

Yes No Unknown

11. Are there currently, or to the best of your knowledge have there been previously, any pits, ponds or lagoons located on the Subject Property or any *adjoining* property in connection with waste treatment or waste disposal?

Yes No Unknown

12. Is there currently, or to the best of your knowledge has there been previously, any stained soils on the Subject Property?

Yes No Unknown

13. Are there currently, or have there been previously, any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal (19 L) in volume or 50 gal (208 L) in the aggregate, stored on or used at the Subject Property?

Yes No Unknown

14. Are there currently, or have there been previously, any industrial *drums* (typically 55 gal (208 L)) or sacks of chemicals located on the Subject Property?

Yes No Unknown

15. Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered storage tanks (above or underground) located on the Subject Property?

Yes No Unknown

16. Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Subject Property or adjacent to any structure located on the Subject Property?

Yes No Unknown

17. Are there currently, or have there been previously, any flooring, drains, or walls located within any Subject Property structure that are stained by substances other than water or are emitting unusual odors?

Yes No Unknown

18. If the Subject Property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environmental/health agency?

Yes No Unknown

There is an existing well in the northwest area of the site (just below where the mobile home used to be). As there were no well records at the county, Premier conducted a flow test resulting in only 7 gal/minute sustained flow. Intend is to abandon the well in place. Hence, no water tests were conducted.

19. Are you aware of any floor drains or sumps on the Subject Property?

Yes No Unknown

20. Are there any transformers, capacitors, or hydraulic equipment (i.e., hydraulic lifts) on the property which may contain PCBs?

Yes No Unknown

21. Do you have any knowledge of *environmental liens* with respect to the Subject Property?

Yes No Unknown

22. Have you been informed of the past or current existence of environmental violations with respect to the Subject Property?

Yes No Unknown

23. Have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the Subject Property?

Yes No Unknown

24. Do you have any Phase I Environmental Site Assessment or other environmental reports for the Subject Property? If yes, please provide copies for review.

2008 Phase 1 & 2 ESA by Earthtec (provided via download)

What company or agency provides the following utilities to the Subject Property or the Subject Property vicinity:

Electricity? PGE

Natural gas? PGE

Sanitary Sewer? SPMUD

Potable water? PCWA

Are there any wells (monitor, irrigation, or potable) on the site? Yes, see above.

Are there any septic tanks on the site? Yes, see tracing plan provided via download

To the best of the undersigned knowledge, the above statements and facts are true and correct and to the best of the undersigned's actual knowledge no material facts have been suppressed or misstated.

User Questionnaire

The ASTM Standards require that the *User* of the report, Premiere 40, LLC, a California Limited Partnership, or your representative, answer the questions found on the following site assessment questionnaire.

Please answer these questions in good faith and to the extent of your actual knowledge. Circle the appropriate answer. For yes answers please provide additional explanation. We would appreciate it if you would FAX the completed questionnaire as soon as possible to Youngdahl Consulting Group, Inc. FAX: 916-933-6482 or email it to Nancy Malaret at Nancy.Malaret@youngdahl.net or David Sederquist at dcsl@youngdahl.net

1. Do you have any knowledge of *environmental liens* Yes No Unknown
with respect to the Subject Property?

2. Do you have any knowledge of *activity and use limitations* with respect to the Subject Property? Yes No Unknown

3. Do you have any *specialized knowledge* or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *subject* or *adjoining properties* so that you would have specialized knowledge of the chemicals and processes used by this type of business? Yes No Unknown

4. Have you been informed of the past or current existence of environmental violations with respect to the Subject Property? Yes No Unknown

5. Is the purchase price or appraised value of the Subject Property significantly less than comparable properties in the vicinity? Yes No Unknown

6. Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of releases or threatened releases? Yes No Unknown
7. Do you know the past uses of the Subject Property? Yes No Unknown
If yes, what were they?
8. Based on your knowledge and experience related to the Subject Property are there any obvious indicators that point to the presence or likely presence of contamination at the Subject Property? Yes No Unknown

To the best of the undersigned knowledge, the above statements and facts are true and correct and to the best of the undersigned's actual knowledge no material facts have been suppressed or misstated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Youngdahl Consulting Group were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSArecords. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Contact: Nancy M Malaret

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Youngdahl Consulting Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

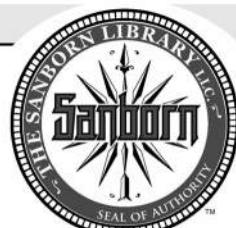

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Youngdahl Consulting Group (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT.** ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

5820 ROCKLIN ROAD
LOOMIS, CA 95650

COORDINATES

Latitude (North):	38.7864420 - 38° 47' 11.19"
Longitude (West):	121.1949100 - 121° 11' 41.67"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	656784.3
UTM Y (Meters):	4294418.0
Elevation:	367 ft. above sea level

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL..... National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY..... Federal Facility Site Information listing
SEMS..... Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE..... Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS..... Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG..... RCRA - Large Quantity Generators
RCRA-SQG..... RCRA - Small Quantity Generators
RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS..... Land Use Control Information System

EXECUTIVE SUMMARY

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROLS..... Institutional Controls Sites List

Federal ERNS list

ERNS..... Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE..... State Response Sites

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF..... Solid Waste Information System

Lists of state and tribal leaking storage tanks

LUST..... Geotracker's Leaking Underground Fuel Tank Report
INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land
CPS-SLIC..... Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST..... Underground Storage Tank Listing
UST..... Active UST Facilities
AST..... Aboveground Petroleum Storage Tank Facilities
INDIAN UST..... Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State

EXECUTIVE SUMMARY

Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/21/2025 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
LOOMIS UNION SCHOOL Facility Id: 60003055 Status: No Action Required	5500 BARTON ROAD	ENE 0 - 1/8 (0.041 mi.)	2	9
Lower Elevation				
LOOMIS HILL ESTATES Facility Id: 31010010 Status: Certified	5337 LONE PINE LAND	N 1/4 - 1/2 (0.365 mi.)	3	11
STONEBROOK ESTATES Facility Id: 31010001 Status: Refer: Other Agency	5760 SCHATZ LANE	W 1/2 - 1 (0.633 mi.)	4	15

Lists of state and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 04/21/2025 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LOOMIS HILL ESTATES Status: Certified Facility Id: 31010010	5337 LONE PINE LAND	N 1/4 - 1/2 (0.365 mi.)	3	11

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category, depending on the level of threat to public health and safety or the environment they pose.

A review of the SCH list, as provided by EDR, and dated 04/21/2025 has revealed that there is 1 SCH

Completed Document Type: * Discovery
Completed Date: 03/28/1991
Comments: Facility Identified: Received letter regarding analytical results from soil testing & removal prior to subdivision development of property. Placer County Health had no involvement with the remedial work. Site Screening Done: Placer County Assessor Office indicates that the parcel is subdivided for residential development. Results presented in a March 1990 letter indicate that soil in the area of an old barn that had previously tested positive for DDT & other pesticides had been removed. Control area samples showed 2.7 parts per million DDT. Low-priority Preliminary Endangerment Assessment recommended.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation:	367 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 50005985 ROCKLIN, CA
Version Date: 2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

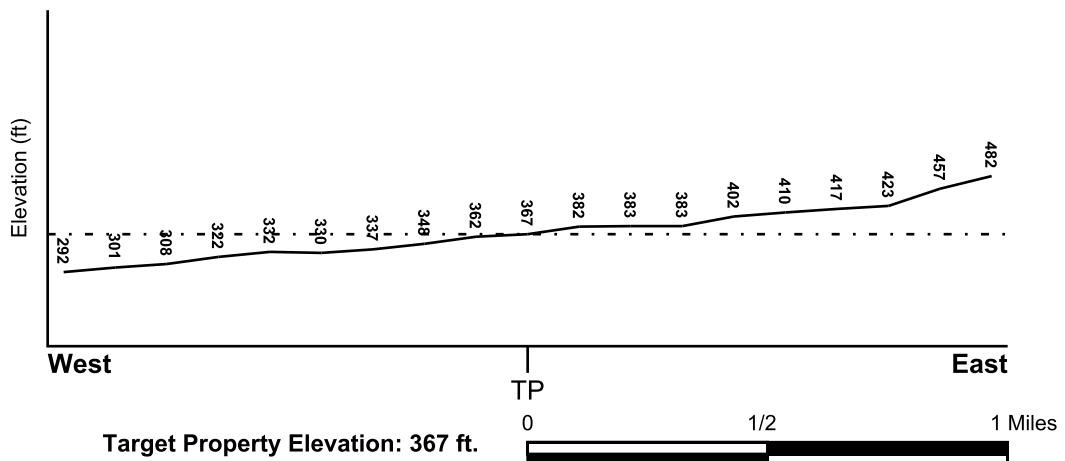

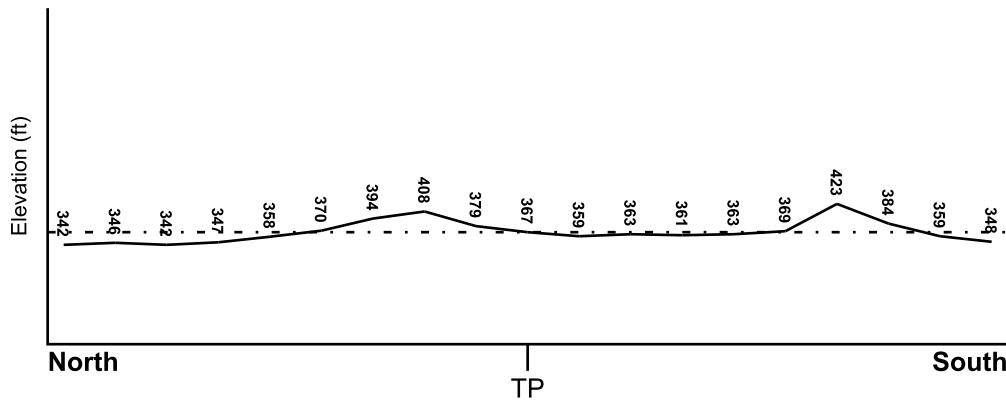

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ROCKLIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ANDREGG

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 0.42 Min: 0	Max: Min:
2	14 inches	29 inches	coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 0.42 Min: 0	Max: Min:
3	29 inches	33 inches	weathered bedrock	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 0.42 Min: 0	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Xerofluvents
 Soil Surface Texture: stratified loamy sand to fine sandy loam
 Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
 Soil Drainage Class: Somewhat poorly drained
 Hydric Status: All hydric
 Corrosion Potential - Uncoated Steel: High
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 111 inches

Soil Layer Information								
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil			
1	0 inches	14 inches	stratified loamy sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14 Min: 1.4	Max: 8.4 Min: 7.9	
2	14 inches	37 inches	stratified loamy sand to fine sandy loam to silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14 Min: 1.4	Max: 8.4 Min: 7.9	
3	37 inches	55 inches	stratified loam to silty clay loam to clay	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14 Min: 1.4	Max: 8.4 Min: 7.9	

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division
