To Town Council and residents of Loomis:

Unfortunately I will not be able to attend tonight's meeting on the bicycle master plan. This is due to illness (me).

I would like to support the approval of this plan as submitted to the council. I have participated in the development process of the plan by attending the workshops, listening to comments and voting to send this to council as a planning commissioner. The document, while the language is broad, give us an updated guide on how to proceed on improving bicycle transportation in our area, both for recreation and commuting etc. The documents reflects many of the current directions that other communities are taking to improve and encourage bicycling in their areas. The latitude or broadness of the language gives use leeway to develop the plan as we see fit for out town. While some of the comments in the staff report and document might move people in different directions on small issues, there is nothing in them that should hold up the acceptance of this document. I also feel that a citizens group be formed who can work toward the implementation of this document is necessary, otherwise the plan might languish.

Thank You

Greg Obranovich
