

PCI values are determined by visual inspection of each road segment on a 5-year rotating basis. Many factors increase and decrease the PCI in between rating events. The intended use of this data is to report average road network conditions, determine funding scenarios for budget forecasting, and to maintain eligibility for certain grant programs. This list includes systematic errors that are being corrected: **cross-reference the Road List, Subdivision Maps and Board Meetings** to confirm if sections are County maintained. Pavement condition should always be confirmed by visual inspection.
