What Are Residential Indoor and Outdoor Lighting Requirements?

Residential indoor and outdoor lighting technologies regulated by California’s Building Energy Efficiency Standards (Title 24, Part 6 or Energy Code) include luminaires, high-efficacy luminaries, vacancy/occupancy sensors and switching controls. The requirements in this fact sheet apply to residential, single-family buildings and multifamily buildings that are three stories or less. Residential lighting requirements also apply to residential spaces in nonresidential buildings, including dwellings in high-rise residential buildings, guestrooms of hotels/motels, and dwelling spaces of fire stations, dormitories and senior housing.
Know Your Project – Key Terms

- **Additions**: Includes any addition of new conditioned square footage and volume, where new luminaires are installed.
- **Alterations**: Includes modifications where luminaires are replaced via a building permit through Authority having Jurisdiction (AHJ).
- **Permanently Installed Lighting**: Includes hard wired ceiling luminaires, chandeliers, vanity lamps, wall sconces, under-cabinet luminaires, luminaires in drawers/cabinets, night lights, step and path lights, and any other luminaire that is attached to the building, or buildings, on the property.
- **Vacancy Sensor**: A manual-on/automatic-off lighting control, which includes a manual-off option.
- **Occupancy Sensor**: Allows when it is programmed to function like a vacancy sensor (manual-on) for final inspection.
- **Low-Rise Multifamily**: Residential building with ≥3 dwelling units and ≤3 habitable stories above grade.
- **High-Rise Multifamily**: Residential building with ≥3 dwelling units and >4 habitable stories above grade.

Why? The California Energy Commission estimates that in California, lighting accounts for 22% of residential electricity use. The Energy Code for residential lighting is designed to increase the use of efficient technologies in order to decrease this consumption.

Relevant Code Sections

2019 California Building Energy Efficiency Standards, Title 24, Part 6:

- Section 110.9 – Mandatory Requirements for Lighting Controls
- Section 130.0(b) – Nonresidential, High-rise Residential, and Hotel/Motel Occupancies - Functional Areas where Compliance with the Residential Lighting Standards is Required
- Section 130.0(c) – Luminaire Classification and Power
- Section 130.0(d) – Lighting Controls
- Section 130.0(e) – Energy Management Control System (EMCS) (when applicable)
- Section 150.0(k) – Mandatory Features and Devices, Residential Lighting
- Joint Reference Appendix JAB – Qualification Requirements for High Efficacy Light Sources
- Joint Reference Appendix JA10 – Test Method for Measuring Flicker of Lighting Systems
- Residential Compliance Manual, Chapter 6 – Residential Lighting

Relevant Compliance Forms

**Certificate of Installation:**

When HERS measures are required, the CF2R must be created on a HERS provider website to be registered. This is required for all forms associated with a project that has any HERS measures.

When HERS measures are NOT required, these forms can be used:

- CF2R-LTG-01-E – Certificate of Installation, Lighting - Single Family Dwellings
- CF2R-LTG-02-E – Certificate of Installation, Lighting - Multifamily Dwellings

For more on HERS requirements, see the Energy Code Ace 2019 HERS Fact Sheet.

Compliance Requirements

All residential lighting requirements are Mandatory requirements. There are no tradeoffs between lighting and other building features. For compliance with the Energy Code and Title 20, the Energy Commission maintains a database of appliances and other devices which have been certified to the Energy Commission, including qualifying high efficacy luminaires called the Modernized Appliance Efficiency Database System (MAEDbS). You may search the MAEDbS for certified products.
Mandatory Requirements

Luminaires: Section 150.0(k)

- All permanently installed lighting, including lighting integral to exhaust fans, unless part of a kitchen exhaust system, must meet these requirements.
- Installed luminaires must be classified as high efficacy for compliance per Table 150.0-A.
- Recessed Downlight Luminaires in Ceilings: Luminaires recessed into ceilings must not contain screw base sockets and must meet the following requirements:
  - Use a rated zero clearance insulation contact and airtight can (ICAT) using a gasket or caulk between luminaire housing and ceiling and for all air leak pathways between conditioned and unconditioned spaces.
  - Allow ballast or driver maintenance and replacement to be readily accessible from below the ceiling for luminaires with hardwired ballasts or drivers.
  - Contain light sources that are JA8 certified.
- Night lights, step lights and path lights, and light sources in drawers, cabinets and linen closets:
  - If consuming no more than 5 watts of power and emitting no more than 150 lumens, neither JA8 luminaires nor vacancy/occupancy sensors are required.
  - If consuming over 5 watts or emitting more than 150 lumens, JA8 luminaire and vacancy/occupancy sensors are required.
- Screw base luminaries must not be recessed and must meet high-efficacy requirements of JA8.
- If separable light sources are installed in an enclosed or recessed application, they must be marked "JA8-2016-E," indicating they are certified as meeting the elevated temperature requirements of JA8.

Ballasts

- Ballasts for fluorescent lamps ≥13 watts must be electronic with an output frequency ≥20 kHz.

For more information on the JA8 qualification requirements, see the Energy Code Ace fact sheets on High Efficacy Lighting for Manufacturers, and Title 20 and Title 24, Part 6 JA8: Key Differences and Overlap.

Luminaire Efficacy Classification (JA8)

All installed luminaires must meet the requirements in Table 150.0-A. Table 1, below, outlines these requirements.

<table>
<thead>
<tr>
<th>Indoor</th>
<th>Automatically High Efficacy</th>
<th>Using JA8 Certified Lamps (JA8-2016-E must be used for enclosed lamps/luminaires)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Pin-based linear fluorescent</td>
<td>• LED luminaires with white integral sources that are not decorative</td>
</tr>
<tr>
<td></td>
<td>• Pin-based compact fluorescent</td>
<td>• Screw base LED lamps</td>
</tr>
<tr>
<td></td>
<td>• Inseparable SSL luminaires with colored light sources for decorative lighting purpose</td>
<td>• Pin-based LED lamps</td>
</tr>
<tr>
<td></td>
<td>• Any light source not otherwise listed</td>
<td>• Recessed/recessed ceiling downlights or enclosed lights that are not screw base, and that use an ICAT-rated can</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outdoor</th>
<th>Automatically High Efficacy</th>
<th>Using JA8 Certified Lamps (JA8-2016-E must be used for enclosed lamps/luminaires)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Pulse-start metal halide light sources</td>
<td>• Any light source not otherwise listed</td>
</tr>
<tr>
<td></td>
<td>• High pressure sodium light sources</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Luminaires with hardwired high frequency generator and induction lamp</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• LED light sources that are installed outdoors</td>
<td></td>
</tr>
</tbody>
</table>

Table 1: High Efficacy Light Source Classification (derived from Table 150.0-A)
Controls: Sections 110.9(b) and 150.0(k)

In addition to the requirements of Section 150.0(k), the controls must meet the minimum requirements for control functionality of all applicable controls per Section 110.9.

<table>
<thead>
<tr>
<th>Location</th>
<th>Control Requirements</th>
<th>Special Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Vacancy Sensor</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bathroom</td>
<td>At least one luminaire in each of these rooms must be controlled with vacancy/occupancy sensor, no matter the luminaire source type</td>
<td>Exhaust fans must be controlled separately from lighting</td>
</tr>
<tr>
<td>Laundry/Utility</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Garage (attached or unattached)</td>
<td></td>
<td>Undercabinet lighting must be switched separately from ceiling mounted luminaires in a manner in which only one or the other are on at the same time</td>
</tr>
<tr>
<td>Kitchen</td>
<td></td>
<td>EMCS can be used if required code control requirements are met, and complies with §130.4 EMCS requirements</td>
</tr>
<tr>
<td>All Other:</td>
<td></td>
<td>Dimmers and vacancy/occupancy sensor functions, required by code, must not be bypassed</td>
</tr>
<tr>
<td>bedrooms, living rooms, office, dining, attic spaces, closets ≥ 70 ft², detached storage buildings</td>
<td></td>
<td>If multisene programmable controllers are used, they must meet dimmer requirements of §110.9 and §150.0(k)</td>
</tr>
<tr>
<td>Closets &lt; 70 ft²</td>
<td>Dimmer, vacancy sensor or occupancy sensor is not required even if JAB8 light sources are used</td>
<td></td>
</tr>
<tr>
<td>Hallways</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Blank Electrical Boxes (more than 5 feet above floor)</td>
<td>Each box to be controlled by either vacancy sensor, occupancy sensor, dimmer or fan speed control</td>
<td>No greater than the number of bedrooms</td>
</tr>
<tr>
<td>Light Features: night lights, step lights, path lights, and light sources in drawers, cabinets and linen closets</td>
<td>Vacancy sensor(s) or occupancy sensor(s) (and the JAB8 requirements) are not required if the luminaire is ≤ 5 watts and emit ≤ 150 lumens</td>
<td>Light sources in drawers, cabinets and linen closets must be equipped with controls that turn off when applicable drawer, cabinet or linen closet is closed</td>
</tr>
<tr>
<td>Single Family</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Outdoors:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Lighting attached to home or any other building on property</td>
<td></td>
<td>Controls that override to ON are not allowed unless the override automatically reactivates within 6 hours</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Landscape lighting exempt</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Lighting not attached to building(s) is exempt</td>
</tr>
</tbody>
</table>

Table 2: Residential Lighting Controls Requirements

| Residential Lighting Requirements for Additions & Alterations
<table>
<thead>
<tr>
<th>Will Typically Require Compliance</th>
<th>Will Typically Not Require Compliance</th>
</tr>
</thead>
<tbody>
<tr>
<td>• When adding onto a home, the new areas of the home must meet the applicable requirements</td>
<td>• Changing light bulbs</td>
</tr>
<tr>
<td>• When remodeling a home, only the work being done with a permit must meet the applicable requirements</td>
<td>• Changing lighting controls</td>
</tr>
<tr>
<td>– Existing recessed ceiling luminaries with screw base sockets do not need to be replaced as long as JAB8 trim kits/lamps are used</td>
<td>• Replacing lighting fixtures</td>
</tr>
<tr>
<td>• Controls that override to ON are not allowed unless the override automatically reactivates within 6 hours</td>
<td>• Moving lighting fixtures</td>
</tr>
<tr>
<td></td>
<td></td>

<td>$150</td>
<td>≤8 Parking Spaces</td>
</tr>
</tbody>
</table>

*Figure 1: Low-Rise Multifamily Lighting Standards Application*

A. Common Areas: Areas that directly support the residential occupancy (Occupancy Group R), i.e., areas intended for use by the residents of the dwelling units (e.g., lobby, gym, laundry room and sales office for the multifamily dwelling).

B. Nonresidential Occupancies: Occupanices other than dwelling units and common areas in a mixed-use multifamily building.

For more information on the High-Rise Multifamily and Hotel/Motel Occupancy requirements see the Energy Code Ace High-Rise and Low-Rise Multifamily fact sheet.
Forms – Which & When

During Construction

Single Family Buildings
• CF2R-LTG-01-E – Lighting - Single Family Dwellings
  – Completed and signed by the responsible person(s) for the lighting construction projects under Division 3 of the Business and Professions Code (note that one or more forms may be required depending upon the lighting and controls covered by an individual person)
  – Completed after the residential lighting has been installed
    • The responsible person(s) must also provide the homeowner with a lighting schedule of installed products

Multifamily Buildings
• CF2R-LTG-02-E – Lighting - Multifamily Dwellings
  – Completed and signed by the responsible person(s) for the lighting construction projects under Division 3 of the Business and Professions Code (note that one or more forms may be required depending upon the lighting and controls covered by an individual person)
  – Completed after the residential lighting has been installed
    • The responsible person(s) must also provide the homeowner with a lighting schedule of installed products
  • Additional Forms - When nonresidential code sections are triggered, corresponding NRCC, NRCI and NRCA forms may be required
    – Completed and signed by the responsible person(s) for the lighting construction projects under Division 3 of the Business and Professions Code (note that one or more forms may be required depending upon the lighting and controls covered by an individual person)
    – Completed after the nonresidential lighting has been installed
      • The responsible person(s) must also provide the owner with a lighting schedule of installed products

Inspection
For either single-family or multifamily lighting compliance, the inspector should verify that all luminaires are high efficacy and that the required controls have been installed. If dimmers are installed, inspectors should verify that they work appropriately (especially when controlling LED light sources). In addition, the inspector should confirm a luminaire schedule is provided to the building owner.

Why?: To document compliance with lighting requirements applicable to the project.

Certificates of Installation - Submission Guidelines
• A Certificate of Installation (CF2R) must be submitted to the building department for any residential lighting project that is regulated by Title 24, Part 6, whether that lighting project is for only one luminaire or for the lighting of an entire building
• An NRCI installation certificate is required when nonresidential forms are used
• If an Acceptance Test is required, an NRCA form completed by the Acceptance Test Technician (ATT) is required, as well
