

MEMORANDUM

Petaluma Station, 315 D Street, Petaluma, CA Addressing Impacted Soils

Background – The subject property was used as a rail yard since at least 1888 (reportedly back to 1870). The property historically has contained multiple railroad spurs and right-of-way tracks, as well as structures including an engine house (round house), water tanks, turntables (two), tool houses (two), an oil house, and cattle yard (corrals). The structures were reportedly retired in 1947, but railroad spurs/tracks are evident in aerial photography from that time through more current aerial photographs. No data was found to indicate fueling facilities including above ground storage tanks (ASTs) or underground storage tanks (USTs) were historically located at the subject property.

Prior Environmental Assessments - In 1997, subsurface assessments at the subject property included the drilling of 18 borings, including 13 borings in September 1997 in areas previously identified as areas of potential concern, and 5 follow-up borings in December 1997. The field work was completed by a contractor (Geomatrix) on behalf of Union Pacific Railroad (UPRR). Low concentrations of petroleum hydrocarbons (as diesel and motor oil) were detected in shallow soil at the site. One shallow soil sample reportedly contained 1,2,3-cd pyrene at concentrations below regulatory action levels. Metals concentrations were reportedly within background concentrations. Groundwater was reportedly not significantly impacted by petroleum hydrocarbons, BTEX, or related constituents. The data was presented to the San Francisco Regional Water Quality Control Board (SFRWQCB) for review, which resulted in the property address 348 E. Washington being listed as a SLIC site (Site # SL0609791978) under the name Northwestern Pacific Railroad. Documents related to that project are found in the GeoTracker link below:

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL0609791978

The SFRWQCB issued a “Case Closure” letter on February 20, 1998 which stated “no further investigation or remediation at the site will be required by this Regional Board”.

In April 2016, Pinnacle Environmental, Inc. (PEI) completed a Phase I Environmental Site Assessment (ESA) on the property and recommended additional soil and groundwater sampling to address planned future residential development. In July 2016, PEI completed a subsurface investigation at the subject property to evaluate the subsurface at a limited number of accessible areas of the property and to assess the potential environmental impacts from historical onsite operations relative to potential future residential development of the property. The scope included 14 soil borings. Eight of the borings were advanced to collect grab groundwater samples. No groundwater impacts were detected for analyzed organic constituents of concern. Results from shallow soil samples collected from 14 borings detected minor concentrations of

total petroleum hydrocarbons in the diesel range (TPH-d). Phenol was detected in one shallow (~18 inches deep) soil sample at concentrations exceeding environmental screening levels (ESLs). In addition, shallow soil samples contained elevated concentrations of lead and arsenic above published ESLs for residential properties (and above typical background concentrations for the area). These locations were observed in two boring locations near the northern corner of the property, beneath the railroad spurs that parallel the northeastern fence line of the subject property.

Since July 2016, the steel tracks and the wooden railroad ties associated with former railroad spurs on the property have been removed by Sonoma Marin Rapid Transit (SMART). Some ballast/slag, gravel, and railroad fragments (e.g., pieces of ties, metal connectors, etc.) remain in the former track locations. Based on conversations with SMART personnel and a consultant who observed the removal, no significant soil removal or laboratory testing was completed during the course of or after the removal of the railroad tracks and ties.

No further removal of ballast/slag, gravel, or shallow surface soils is planned by SMART. Based on data from the 2016 Phase II, it is likely that some elevated concentrations of arsenic and lead remain at the subject property in soils beneath the former railroad spurs. Other than one shallow soil sample containing phenol, no soil samples contained semi-volatile organics above laboratory detection limits.

Summary of Environmental Investigations - Based on the history of the subject property, relatively minor (de-minimus) concentrations of total petroleum hydrocarbons in the diesel range (TPH-d) and some areas of heavy metals (lead and arsenic) remain in soil at the subject. Additional areas of impacted soil may be encountered during site grading and redevelopment activities. The most probable areas of impacted soils exist in shallow soils beneath the railroad spurs at the property. Areas of known heavy metal impacts near the northern corner will require excavation and disposal with local regulation and appropriate regulatory oversight.

Regulatory Oversight - The applicant (Hines) will seek appropriate regulatory oversight in order to mitigate impacted soil to appropriate residential requirements. In initial conversations with Sonoma County Environmental Department of Health Services (SCEDHS), it was stated that SCEDHS does not provide oversight or this type of regulatory action since they provide oversight primarily for leaking underground storage tank (LUST) sites. SCEDHS stated they would not be the agency that provides regulatory oversight for the removal of impacted soils, confirmation soil sampling, or reporting. Therefore, the San Francisco Regional Water Quality Control Board [SFRWQCB] or California Department Toxic Substances Control [DTSC] would provide regulatory oversight.

There is a “Request of Agency Oversight Application” process whereby the responsible party/applicant (Hines) requests regulatory oversight for future environmental activities at the subject property. The application process provides information to RWQCB & DTSC such that those agencies can decide which agency will become the regulatory lead on the project. The applicant (Hines) will submit a Request of Agency Oversight Application. Whichever agency (RWQCB or DTSC) chooses to be the lead agency, the applicant will follow the directives of that

agency in order to receive regulatory closure and approvals to affect residential construction on the property.

The application process and initial agency review typically takes approximately two months from application submittal to agency selection. RWQCB & DTSC have different protocols for regulatory oversight. DTSC will typically operate under the process of a Remedial Action Workplan (RAW), while the RWQCB typically operates under a Soil Management Plan (SMP). These processes have different sampling and oversight protocols and timing. Therefore, it is premature to assess which additional sampling requirements, if any, may be required at this time. However, it is anticipated that some additional sampling of soils for constituents of concern will be required both prior to and subsequent soil mitigation (e.g., excavation) efforts.

It has been noted that RWQCB has previously provided regulatory oversight for this project which may give them some preference for continuing regulatory oversight.

Future Mitigation Efforts - Appropriate mitigation measures will be required for disposal of impacted soils in accordance with applicable regulations. The measures will be required to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Those measures may include the following as required by the lead regulatory agency:

- Additional soil sampling requirements
- Excavation and stockpiling and removal/disposal of railroad spur ballast/slag and gravel
- Excavation, handling, stockpiling, and disposal of shallow impacted soils
- Dust control measures
- Worker health & safety and monitoring protocols
- Methods of transportation

While not anticipated, future RAW or SMP documentation (depending on the lead agency) will also address potential previously unreported buried items of concern (e.g., trash, debris, drums, USTs) if encountered during construction activities.

Regulatory Action Levels for Mitigation of Soils – Onsite soil concentrations will be compared with RWQCB Tier 1 Environmental Screening Levels (ESLs, January 2019) for soils in a residential setting, as appropriate. It is noted that naturally-occurring background levels of metals (e.g., arsenic) may be innately higher than published ESLs. Final mitigation levels will be determined by the lead oversight agency (e.g., DTSC or RWQCB) in the event that concentrations of specific naturally-occurring metals exceed the residential ESLs. The ESLs for residential soils for known constituents of concern at the subject property are as follows:

Lead = 32 mg/Kg
Arsenic = 0.067 mg/Kg
Phenol = 0.16 mg/Kg
TPHd = 260 mg/Kg

Estimated Quantities of Soil for Removal – Based on data from the 2016 Phase II subsurface assessment, shallow soil samples contained elevated concentrations of lead and arsenic above ESLs for residential properties. These locations were observed in two boring locations near the northern corner of the subject property, beneath the railroad spurs that paralleled the northeastern fence line. Using these two locations, it is conservatively estimated that the shallow soils beneath the northeastern most railroad spurs may require excavation and disposal in order to meet residential ESLs. For the purpose of a rough estimate, the following quantity is postulated:

- Length = half the length of the railroad spur right of way is estimated (approximately 200 feet)
- Width = from the northeastern fence line boundary to the southwestern edge of the tandem railroad spur (approximately 40 feet)
- Depth = below gravel/ballast interface into native soil (approximately 2 feet)

Therefore, the estimate of soil to be removed is 16,000 cubic feet (or approximately 600 cubic yards). Actual quantities of soils to be removed will be completed in coordination with regulatory oversight and sampling requirements.

Other	✓				Soil testing and preparation of Soil Management Plan is recommended prior to future grading or other subsurface work at the property.

SECTION I.
EXECUTIVE SUMMARY & RECOMMENDATIONS

Pinnacle Environmental, Inc. (PEI) was retained by Hines Acquisitions, LLC (Client) to perform a Phase I Environmental Site Assessment Update (Phase I ESA or Assessment) of a site located at 315 D Street in Petaluma, California. Historic addresses also included 348 E. Washington as a potential site address. At the time of the August 21, 2020 site visit, the subject property consisted of an approximate 4.48-acre vacant, structurally undeveloped parcel of land. The subject property is located on the north side of Copeland Street, between Washington and East D Street, south of Lakeville Street, within a commercial and residential area.

This Phase I ESA was performed in general accordance with the scope and limitations of the *American Society for Testing and Materials (ASTM) Phase I ESA Standard E1527-2013* (equivalent to the USEPA's All Appropriate Inquiry [AAI] Standard), the scope of work defined in this report, as well as the signed service agreement. Exceptions or deviations from the standard are typically expressed as data gaps, data failure or limitations, which are primarily discussed in Sections II and IV-H. The following summarizes PEI's independent conclusions and best professional judgment based upon information available to us during the course of this Assessment.

Based upon the limited site reconnaissance, historical review, regulatory records review, and other information detailed within this report, this Assessment identified the following evidence of ASTM Recognized Environmental Conditions (RECs) or other issues in connection with the subject property:

- ◆ From the historical information review performed, PEI concludes that the subject property was used as a rail yard since at least 1888 (reportedly back to 1870). The property historically has contained multiple railroad spurs and right-of-way tracks, as well as structures including an engine house (round house), water tanks, turntables (two), tool houses (two), an oil house, and cattle yard (corrals). The structures were reportedly retired in 1947, but railroad spurs/tracks are evident in aerial photography from that time through more current aerial photographs. No data was found to indicate fueling facilities (including ASTs or USTs) were historically located at the subject property.

In 1997, subsurface assessments at the subject property included the drilling of 18 borings, including 13 borings in September 1997 in areas previously identified as areas of potential concern, and 5 follow-up borings in December 1997. The field work was completed by a contractor (Geomatrix) on behalf of Union Pacific Railroad (UPRR). A summary of the work performed is discussed in Section III-A and excerpts of the reports are included in the appendix of this report. Low concentrations of petroleum hydrocarbons (as diesel and motor oil) were detected in shallow soil at the site. One shallow soil sample reportedly contained 1,2,3-cd pyrene at concentrations below regulatory action levels. Metals concentrations were reportedly within background concentrations. Groundwater was reportedly not

significantly impacted by petroleum hydrocarbons, BTEX, or related constituents. The data was presented to the San Francisco Regional Water Quality Control Board (SFRWQCB) for review which resulted in the property address 348 E. Washington being listed as a SLIC site under the name Northwestern Pacific Railroad. The SFRWQCB issued a “Case Closure” letter on February 20, 1998 which stated “no further investigation or remediation at the site will be required by this Regional Board”.

In July 2016, PEI completed a subsurface investigation at the subject property to evaluate the subsurface at a limited number of accessible areas of the property to assess the potential environmental impact from historical on-site operations relative to potential future residential development of the property. The scope included 14 soil borings. Eight of the borings were advanced to collect grab groundwater samples. No groundwater impact was detected for organic constituents of concern analyzed. Shallow soil sampling from 14 borings detected minor concentrations of total petroleum hydrocarbons in the diesel range (TPH-d). Phenol was detected in one shallow (~18 inches deep) soil sample at concentrations exceeding environmental screening levels (ESLs). In addition, additional soil samples contained elevated concentrations of lead and arsenic above published ESLs.

Since July 2016, the steel tracks and the wooden railroad ties associated with former railroad spurs on the property have been removed. Some ballast/slag, gravel, and railroad fragments (e.g., pieces of ties, metal connectors, etc.) remain in the former track locations. Based on conversations with SMART personnel and a consultant that observed the removal, no significant soil removal or laboratory testing was completed during the course of or after the removal of the tracks and ties. Therefore, it is likely that elevated concentrations of arsenic and lead remain at the subject property in soils beneath the former railroad spurs. The known residual impacts of constituents of concern in shallow on-site soils is a recognized environmental condition.

Based on the history of the subject property as well as the relatively minor (de-minimus) concentrations of TPH and metals detected in soils at the site, there remains a possibility that additionally impacted soil may be encountered during site grading and redevelopment activities. In the event that future excavation is contemplated (e.g., during grading activities for future development), appropriate measures completed in accordance with applicable regulation, should be taken to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Performance of soil testing and/or development of a formal Soil Management Plan for any property redevelopment may be appropriate to address soil stockpiling and soil profiling to ensure proper soil re-use, disposal, and implementation of worker safety measures. Additionally, should previously unreported buried items of concern (e.g., trash, debris, drums, USTs) be encountered, they should be properly handled and disposed as necessary.

An Executive Summary Overview is also included in the previous section. However, when making any decisions concerning the findings of this Assessment, please also refer to the remainder of this report, which may present other items of interest that are not discussed in the Executive Summary, or further details regarding the above items. In addition, please refer to the Data Gaps section (IV-H) of this report regarding information that may have been unavailable or incomplete which may have a bearing on the findings or usage of this report.

SECTION II.

SCOPE OF WORK & LIMITATIONS

PURPOSE

This Phase I Environmental Site Assessment Update is intended to assist the client regarding one of the requirements for the “innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability” (42 U.S.C. §9601 et seq). Qualification for these limitations is predicated on the assumption that “...the defendant must have undertaken, at the time of acquisition, all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice in an effort to minimize liability....” However, no warranty is made that this report constitutes all appropriate inquiry since numerous other factors, including user responsibilities, are required.

PROTOCOL

The *American Society for Testing and Materials (ASTM) Phase I ESA Standard E1527-2013* is the most current method used in attempting to perform the due diligence required to achieve the above purpose. The E1527-2013 Standard Practice was created by the ASTM “...in an effort to define good commercial and customary practice in the United States of America for conducting an environmental site assessment....” and is equivalent to the USEPA’s All Appropriate Inquiry [AAI] Standard issued November 1, 2005. The ASTM Standard E1527-2013 is intended to identify recognized environmental conditions (RECs) in connection with a given property. The term recognized environmental conditions is not intended to include “*de minimus*” conditions that generally do not present a material risk of harm or that are unlikely to be the subject of enforcement actions by governmental agencies.

SCOPE OF WORK

Generally utilizing ASTM Standard Practice E1527-2013, as well as the scope of work discussed below and in the signed work authorization document (including all conditions and limitations therein), this Assessment involved: A site reconnaissance of the subject property, limited observations of adjoining properties, a review of the historical usage of the subject property, and a review of readily available relevant documentation provided by various public and private sources (including the client and/or owner of the subject property) to identify conditions indicative of releases or threatened releases of hazardous substances, as defined in CERCLA Section 101 (14) U.S.C. § 312.1(c) to evaluate the presence or likely existence of:

- ◆ Recognized environmental conditions, specified by ASTM E1527-2013 as: “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to a release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

- ◆ A brief and general evaluation of limited other potential environmental issues, including: suspect asbestos-containing materials, lead-based paint, polychlorinated bi-phenyls, and radon gas. No lab analyses, quantification, or in-depth observations or discussion will be performed.

LIMITATIONS

In addition to the limitations described in this report, it is also subject to the terms and conditions of the service agreement with the Client, and related engagement or subsequently provided information. As discussed in ASTM E1527-2013, no Phase I ESA can eliminate uncertainty regarding the potential for RECs in connection with a property. This investigation is simply intended to reduce uncertainty within reasonable limits of time and cost.

Refer to Section VI-A for a brief discussion of some (but not necessarily all) specific limitations to PEI's subject property observations at the time of the site visit. The observations contained within this Assessment are based upon conditions readily observable during the site visit. These observations are typically unable to address conditions of areas not inspected, hidden from view, subsurface soil, groundwater, soil vapor, USTs, neighboring properties, and the like, unless specifically mentioned. It is not the purpose of this Assessment to determine the actual presence, or extent of contamination (if any) at the subject property. Unless specifically noted within this report, this Assessment does not include evaluation, observations, testing, or sampling to address groundwater, soil, or extraneous materials contamination (including mold and/or bio-hazardous/medical waste issues) in or on the subject property. PEI is not providing geological interpretations or recommendations. Potential Vapor Intrusion issues from on or off-site sources are not evaluated. Electromagnetic issues (e.g., high-voltage power lines) or radiologic issues (e.g., X-ray usage, other radiation emitting items) are also not included. This Assessment does not include or address reasonably ascertainable environmental liens recorded against the subject property, unless stated. A regulatory compliance audit or health and safety review are not included.

PEI makes no warranties or guarantees as to the accuracy or completeness of information obtained from or compiled by others. Information may also exist which was beyond the scope of this investigation, or was not provided to PEI that may have an impact on the conclusions of this Assessment. This Assessment does not attempt to address past or forecast future site conditions. PEI also cannot forecast or be responsible for changes in regulatory guidelines or protocols, industry standards or the like, which may affect the conclusions and/or future usage of this report.

This Assessment has been conducted and prepared in accordance with generally accepted practices and procedures exercised by reputable professionals under similar circumstances. PEI makes no other warranties or guarantees, either expressed or implied, as to the findings, opinions, or recommendations contained in the report, or as to the existence or non-existence of RECs or other issues at the subject property.

SECTION III.

GENERAL SITE DESCRIPTION

Pinnacle Environmental, Inc. (PEI) was retained by Hines Acquisitions, LLC (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA or Assessment) of a site located at 315 D Street in Petaluma, California. At the time of the August 21, 2020 site visit, the subject property consisted of an approximate 4.48-acre vacant parcel of land.

The subject property is located on the south corner of the intersection of East Washington Street and Lakeville Street and the western corner of the intersection of East D Street and Lakeville Street, within a commercial and residential area. The subject property location is shown on various Figures in the appendix.

During the site visit, which was performed by public access methods, the PEI Assessor was unaccompanied. However, the Key Site Manager, Ms. Laura Giraud with Sonoma Marin Area Rapid Transit (SMART) was notified in advance of the visit, and permission for site access was granted to PEI.

Ms. Laura, Giraud, real estate manager for SMART, owner of the subject property, was identified as the “Key Site Manager.” As defined by ASTM E1527-2013, the Key Site Manager is that person having good knowledge of the uses and physical characteristics of the subject property, and in a position to provide reasonably accurate information. Due to her limited knowledge of the property history, PEI verbally interviewed Ms. Giraud completed the Key Site Manager Environmental Questionnaire subsequent to the site visit. A copy of the questionnaire is included in the appendix of this report. Ms. Giraud answered yes to questions related to prior permits, former underground storage tanks (USTs), and industrial use (as a rail yard). PEI notes that records for USTs were not located during this assessment.

A. CLIENT PROVIDED INFORMATION

As discussed in ASTM E1527-2013, the User (e.g., Client) is required to perform certain tasks or provide certain information to PEI in order to identify potential RECs. Tasks or information to be provided by the Client/User include 1) review of judicial and title records for environmental liens, environmental deed restrictions or activity and use limitations (AULs); 2) provide specialized, actual, commonly known or reasonably ascertainable knowledge regarding the property; and, 3) identify reasons for a significantly lower purchase price (if applicable).

The Client or Key Site Manager (as applicable) has not provided or reported to PEI any information which indicates the subject property is being sold, purchased or valued at a significantly reduced price due to outstanding environmental issues. Nor has the Client or Key Site Manager provided or reported to PEI information indicating a specific knowledge of RECs, historic RECs, Environmental Liens, Activity and Use Limitations, or Environmental Deed Restrictions related to the subject property.

However, PEI was not privy to the original purchase price versus valuation metrics of the property by the current owner or seller (as applicable), and therefore cannot evaluate this parameter. The Client/User of this report may wish to perform such an evaluation.

Previous environmental documentation concerning the subject property that was provided to PEI by the Client includes: A 1994 Phase I ESA issued by Geomatrix, a 1996 Phase II and III by Geomatrix, and a 1998 Groundwater sampling report. The reports are discussed in chronological order below and are included in the appendix for reference.

August 1994 - Preliminary Site Assessment, Northwestern Pacific Railroad, Marin, Sonoma, Mendocino and Napa Counties, prepared by Geomatrix for Hanson, Bridgett, Marcus & Rudy (law firm in San Francisco). The subject property is included in this report as a portion of a much larger assessment for the railroad. Discussion regarding the subject property, known as Petaluma Station is presented below (directly excerpted):

The Petaluma station is located at milepost 38.5 in the city of Petaluma. According to information presented by Stindt (1964), the Petaluma station served as a fuel and water station; the station also contained an engine house (roundhouse) from 1870 until 1908. The SPTCo structure record index reports that a water tank existed at the Site until 1955; however, fuel distribution facilities are not recorded. Additionally, SPTCo valuation maps and the structure record index do not list the former engine house, possibly because it reportedly was dismantled shortly after SPTCo and Santa Fe Railroad Company jointly acquired the rail line in 1906.

Another feature shown on SPTCo valuation maps and listed in the structure record index that potentially may have affected environmental conditions at the Site, was a turntable (retired in 1941). Two tool houses, both retired in 1960, were located on the station property; there is no record of USTs associated with the tool houses or at other locations on the station property. According to the SPTCo structure record index, additional structures that potentially could impact environmental conditions existed on the station property that are not shown on the valuation maps. These structures included main shops and an oil house, all of which were retired in 1947.

Geomatrix reviewed Sanborn maps showing the Petaluma station property and vicinity dated 1888, 1906, 1910, 1923, and 1950. Throughout this period, these maps showed land use near the station to be primarily commercial and industrial. In addition to features shown on the valuation maps, the 1906 Sanborn map confirms the presence of the former engine house (labeled as a roundhouse on the Sanborn map) and a turntable in the northwest corner of the property. The engine house and turntable were still present in 1910, but had disappeared by 1923. Generally, other structures shown on the Sanborn maps are present on the SPTCo valuation maps; the tool houses and shops are not shown on the Sanborn maps.

Other Potential Environmental Features On Site

No other on-site historical features that could impair environmental conditions were identified during the historical review for Section VII of the Site.

Potential Environmental Features Off Site

Within this section were off-site facilities that potentially could environmentally affect the Site. The California Petroleum Corporation was shown on a SPTCo valuation map immediately east of the Site at approximately milepost 36.8. The valuation map shows a tank near the rail line at this location; it is not known whether this is an above- or underground tank.

Various facilities abutted the east side of the Site between milepost 38.0 and 38.2 (south of the Petaluma station), as shown on SPTCo valuation maps and Sanborn maps. These facilities included, north from milepost 38, the Petaluma Fertilizer Company, the Stapleton & Smith Salvage Warehouse, a Union Oil facility, the Petaluma Tanning Company, and a Standard Oil facility. Associated with the oil company facilities are large, aboveground storage tanks, oil houses, and warehouses. The Petaluma Tanning Company included tannery buildings, a large-diameter aboveground tank, and a power house.

Site Reconnaissance

The station building and American Railway Express building currently exist at the station property. These buildings currently are used by SPTCo personnel for administrative purposes.

Six 55-gallon drums were observed stockpiled on the station property. Four of the drums appeared to contain petroleum hydrocarbon-based liquids; two drums were empty. An approximately 100-square foot surface stain was observed on soil adjacent to the drums. Three empty storage tanks ranging in size from 500 to 5000 gallons were observed immediately south of the American Railway Express building. The surface soil in the immediate vicinity of the drums was stained, possibly with petroleum product. Heavy petroleum hydrocarbon staining also was observed on a spur track on the west side of the station property.

May 1996 – Phase II and Phase III Program Findings, Northwestern Pacific Railroad, Novato to Willits California (Volume 1 of 3), prepared by Geomatrix for Holme, Roberts & Owen (law firm in Boulder, CO). The subject property is included in this report as a portion of a much larger assessment for the railroad. Discussion regarding the subject property, known as Milepost 38.5 or Petaluma Station is presented below (directly excerpted):

The Petaluma Station is located at milepost 38.5 in the City of Petaluma and formerly served as a water, fuel, and train maintenance station. As shown on Figure 4, the former maintenance facilities previously identified in the Phase I program that were located in the northwestern portion of the station property are excluded from the sale property. However, a Phase II sampling program was developed for the portion of the Petaluma Station within the current sale property to evaluate whether significant environmental impacts to soil may have occurred due to the proximity of the maintenance operations, and from potential chemical usage and handling that may have occurred throughout the station property.

Sampling Program

Random sampling was performed within the sale property to evaluate potential significant environmental impacts to soil. This methodology was used because the site historically operated as a fueling and maintenance station, and no information is available that delineates where specific activities occurred.

For the Phase II program, six borings were drilled at the locations shown on Figure 4. The drilling locations were selected by developing an approximately 25-foot square grid that extended east of the existing American Railway Express building to the west side of the station building and to the north and south sale boundaries, with each node on the grid a potential boring location. The nodes were numbered, and boring locations PB1 through PB6 were randomly selected. Soil samples were collected from four depths from each boring. The samples were composited into one sample per boring for analysis of TPHd, TPHm, SVOCs, and metals. In addition, two discrete soil samples

(PB1-6.0 and PB3-7.0) were collected and analyzed for VOCs. Groundwater was encountered at the time of drilling at depths ranging from approximately 9.8 to 12.5 feet bgs.

Analytical Results

TPHd, TPHm, and SVOCs were not detected above method reporting limits and metals were not detected above background concentrations in the six composite samples (Tables 2 and 3). VOCs were not detected above method reporting limits in the discrete soil samples (Table 2).

Discussion

Based on results of the Phase II sampling at the Petaluma Station, we recommend no further action at this location.

PEI notes that the boring locations for this assessment were located on northern adjoining parcel currently occupied by the Petaluma Visitors Center, Petaluma Arts Center and a restroom. These borings were not located on the subject property.

January 15, 1998 – Soil and Grab Groundwater Sampling Results, Petaluma Station Option Property., prepared by Geomatrix for the San Francisco California Regional Water Quality Control Board (SFRWQCB). The report is prepared on behalf of Union Pacific Railroad (UPRR) and the Northwestern Pacific Railroad Authority in accordance with an April 29, 1997 workplan that was approved by the SFRWQCB on December 2, 1997. The report provides the background and rationale for additional sampling at the subject property. Portions of that report are presented below (some directly excerpted):

Background

During a Phase I environmental site assessment conducted in 1992 and early 1993, several areas of possible environmental impact were identified that may have resulted from historical features or from features identified during the Phase I assessment. The objective of the sampling and chemical analysis program defined in the April 1997 work plan was to evaluate the possible presence of total petroleum hydrocarbons characterized as diesel (TPHd) and as motor oil (TPHmo), polynuclear aromatic compounds (PNAs), and metals in soil in the vicinity of historical features and observed soil staining; and dissolved TPHd, and benzene, toluene, ethylbenzene, and xylenes (BTEX) in shallow groundwater. The objective of the sampling and chemical analysis program defined in the November 1997 work plan was to evaluate whether soil has been affected by arsenic as a result of former railroad activities, or whether its presence, on average, is within expected background concentrations for this site.

Field Work

In September 1997 thirteen borings were completed at the property using direct push sampling methodologies. Four soil samples were collected from each boring. The two upper and two lower soil samples were composited for chemical analysis. Grab groundwater samples were collected from temporary monitoring wells at six locations (B8 to B13). The temporary wells were screened at depths of 14 to 19 feet bgs.

In December 1997, five additional borings (B8-A, B8-B, B-10A, B-10B, and B-10C) were completed for soil sampling only.

Soil samples were analyzed for TPH as diesel (TPHd) and motor oil (TPHmo), polynuclear aromatics (PNAs), and Title 22 metals. Grab groundwater samples were analyzed for TPHd, and BTEX (benzene, toluene, ethylbenzene and xylenes).

Analytical Results

From the September 1997 sampling event, TPHd was not detected in soil samples. TPHmo was detected in 11 of 22 soil samples at concentrations ranging from 8 to 150 mg/Kg; and primarily in the upper-most depths (e.g., 1.5 to 3.5 feet). Low concentrations (e.g., 8 and 10 mg/Kg) of TPHmo were noted in two of the borings (B-10 & B-11). Only on PNA (1,2,3-cd pyrene) was detected in one of the 22 samples at low concentrations (0.078 mg/Kg). It was not present in the deeper sample in the same boring. Metals were noted expected background levels. Grab groundwater samples were below detection limits for TPHd, benzene, ethylbenzene and xylenes. Only toluene was noted in one grab sample at 0.06 ug/L.

From the December 1997 sampling event, soils samples were collected adjacent to B-8 and B-10. Since arsenic was detected in these borings at higher concentrations than other borings in the September 1997 (as high as 15 mg/Kg), arsenic was analyzed in these additional borings. The data indicated arsenic in the vicinity of B-8 and B-10 was on average similar to prior samples and within background concentrations.

Geomatrix concluded “Based on the analytical data, the site has not been significantly impacted and does not pose a threat to human health and the environment. Therefore, no further investigation or remediation is recommended”.

April 2, 2016 - Phase I ESA prepared by PEI for Lomas Partners, on the subject property. This Phase I ESA Update is prepared as an update to that assessment which concluded “Based on PEI’s review of the prior assessment, PEI concurs that results from prior investigations indicated only minor (de minimis) impact from petroleum hydrocarbon compounds and metals. However, PEI understands there are current plans to develop the Site as a commercial-residential complex. For such a development, PEI recommends additional due diligence assessment at the subject property to further evaluate the current conditions as it may relate to the planned development”.

July 26, 2016 - Subsurface Phase II Environmental Site Assessment Report, prepared by PEI for Lomas Partners, on the subject property. PEI completed a subsurface investigation at the subject property to evaluate the subsurface at a limited number of accessible areas of the property to assess the potential environmental impact from historical on-site operations relative to potential future residential development of the property. The scope included 14 soil borings. Eight of the borings were advanced to collect grab groundwater samples. No groundwater impact was detected for organic constituents of concern analyzed. Shallow soil sampling from 14 borings detected minor concentrations of total petroleum hydrocarbons in the diesel range (TPH-d). Phenol (previously reported as pyrene) was detected in one shallow (~18 inches deep) soil sample of 14 samples at a concentration of 0.88 mg/Kg, which exceeds published environmental screening levels (ESLs) of 0.16 mg/Kg. In addition, additional soil samples contained elevated concentrations of lead and arsenic above published ESLs. PEI concluded that in the event that future excavation is contemplated, appropriate measures, in accordance with applicable regulation, should be taken to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Performance of soil testing and/or development of a formal Soil Management Plan for any property redevelopment may be appropriate, to address soil

stockpiling and soil profiling to ensure proper soil re-use, disposal and implementation of worker safety measures.

April 3, 2020 – Technical Review of Environmental Site Assessment, SMART Parcel, 315 D Street, Petaluma, prepared by Baseline Environmental Consulting (Baseline) for WRA. Baseline reviewed the 2016 Phase I and II reports prepared by PEI, and reviewed updated database and Geotracker information. Baseline concluded the following (directly excerpted):

Further investigation should be performed to further characterize surficial and shallow soil throughout the site, including soil in areas of existing and former railroad spurs, soil in areas where surface staining was previously noted, and existing stockpiles of soil and other materials.

Because elevated levels of arsenic, lead, TPHd, and phenol have been detected in soil at the project site, and there is the potential for additional impacts from hazardous materials to be identified in the subsurface of the project site, remediation of the project site should be planned to ensure that construction workers, the public, and future occupants of the project site would not be exposed to elevated levels of contaminants in soil during or after construction activities

Additional investigation and planning of remediation activities should be performed under the oversight of an appropriate regulatory agency (e.g., DTSC or Regional Water Board) or a 3rd party qualified Environmental Professional selected by the City to ensure that the characterization and remediation of the project site is performed in a manner that would ensure protection of human health and the environment.

Baseline recommended (directly excerpted):

A Soil and Groundwater Management Plan (SGMP) should be prepared and implemented under the oversight of an appropriate regulatory agency or a 3rd party qualified environmental Professional selected by the City to ensure that appropriate procedures for characterization and management of soil and groundwater are implemented on the project site during construction activities. The SGMP should include procedures for the management of subsurface historic features of environmental concern that could be present at the project site such as buried rail spurs, USTs, sumps/vaults, and drainage lines; and management of potentially contaminated deeper soil/groundwater (if encountered) during construction.

The above discussion is only a brief summary of the information that is found in the full reports listed above. The reports should be read in their entirety to obtain a more complete understanding of the information provided, and to aid in any decisions or actions that may be made or taken based on that information. PEI assumes the information in the reports is accurate, unless specifically stated.

No other previous environmental documentation (Phase I ESAs, Phase II ESAs, etc.) concerning the subject property was provided to PEI or reported to exist by the Client or Key Site Manager. It is possible information contained in prior reports (if any) could change PEI's conclusions or recommendations herein. If previous environmental documentation becomes available to the Client or subject property owner, a copy should be provided to PEI for review. PEI reserves the right to alter its conclusions herein based upon such new information.

In addition, as discussed in ASTM E1527-2013, information previously reviewed by another consultant is not required to be re-researched or verified as long as that information is believed to be accurate and completed in accordance with the AAI procedures and is not contradicted by new documentation. In the preparation of this report, PEI may have used certain information presented in the previous report(s), with new research performed where appropriate. Reference is provided in the relevant section where such information is used.

B. ADJOINING AND ADJACENT PROPERTIES

As discussed in ASTM E1527-2013, an adjoining property is any real property whose border is contiguous or partially contiguous with the subject property, or would be if the properties were not separated by a roadway, street or other public thoroughfare. For the purposes of this report, an adjacent property is any real property located within approximately one block or less of the subject property's border.

Specifically, the subject property is bordered by the following:

Northwest	Immediately by East Washington Street, then by a commercial retail shopping center (355 – 361 East Washington Street). Closest tenants include Wheel Works/O'Reilly Auto Parts, and CVS.
North	Immediately by the intersection of East Washington Street and Lakeville Street, then by a commercial-use property (Craftsman Floor Coverings at 401 East Washington Street)
Northeast	Immediately abutting by three structures occupied by the Petaluma Visitors Center, Petaluma Arts Center and a restroom, then by a railroad right-of-way, then by Lakeville Street. On the north side of Lakeville Street are various commercial-use properties (north to south) including Taco Bell (406 East Washington St), and an older retail shopping center/warehouse (Burdell Building at 405 East E Street).
East	Immediately by the intersection of Lakeville Street and East D Street, then by a commercial-use property (Wilibeas Wines & Spirits at 309 Lakeville Street)
Southeast	Immediately by East D Street, then mainly by undeveloped land except for a commercial-use property near the southern corner (Lind Marine at 300 East D Street). Two railroad tracks transect the southeastern parcel and D Street and enter (and terminate) at the edge of the subject property.
South	Immediately by the intersection of Copeland Street and East D Street, then by an industrial-use property to the east, a bridge directly south and additional industrial-use properties to the west.

Southwest	Immediately by Copeland Street, then by mainly undeveloped land with two warehouse structures (neither building has an exterior address).
West	Immediately by the intersection of East Washington Street and Copeland Street, then by industrial-use properties to the northwest and west with commercial-use properties to the southwest (Grocery Outlet at 80 East Washington Street)

C. USGS TOPOGRAPHIC MAP

The subject property’s physical setting was researched employing a United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle (Quad) Map relevant to the subject property. The USGS 7.5 Minute Quad Map has an approximate scale of 1 inch to 2,000 feet, and shows physical features such as wetlands, roadways, mines, and buildings. The USGS 7.5 Minute Quad Map was used as the Standard Physical Setting Source, and is sufficient as a single reference. A copy is included in the appendix.

The Petaluma, California Quad Map (dated 1981) shows no physical features that are likely to environmentally impact the subject property. The subject property is identified as undeveloped land. No mines, wells, aboveground storage tanks, or wetlands were depicted in the immediate area of the subject property. The elevation of the subject property is approximately 12 feet above mean sea level with a slight topographic gradient to the south.

D. GENERAL HYDROGEOLOGIC CHARACTERISTICS

According to a June 2016 subsurface sampling completed by PEI, soils encountered were generally be described as predominantly silty and clayey, with varying percentages (less than 15% to about 30%) of fine to coarse-grained sand and fine gravel. Thin lenses (approximately 1 to 2 feet thick) of silty and clayey sands and fine gravels were noted at various depths between approximately 10 to 24 feet in most of the nine borings completed for groundwater collection. Groundwater was present in most of the coarser grained lenses; however, groundwater was slow to enter temporary casings set into the borings in approximately half of the borings advanced for groundwater collection. Depth to “static” groundwater in the borings generally ranged from approximately 10 to 12 feet bgs. According to a January 15, 1998 Soil and Grab Groundwater Sampling Results report issued by Geomatrix , the lithology of the site is “*generally underlain by 4 to 9 feet of silty sand, underlain by clay and sandy clay to 19 feet below ground surface, the maximum depths of the borings*”. Groundwater was encountered between 13 to 16.5 feet below ground surface. The available on-line data also indicates a general southeasterly direction of groundwater flow

SECTION IV. HISTORICAL REVIEW

The site historical review is used to develop an understanding of the previous uses of the subject property and surrounding area in an effort to identify the likelihood of past uses, or activities having environmentally impacted, the subject property. The historical review consisted of a search of various public and private Standard Historical Sources, as detailed in the sections below.

As defined by ASTM E1527-2013, a Standard Historical Source is considered complete if the information contained within the source identifies all uses of the subject property from the time the property was first used for residential, agricultural, commercial, industrial or governmental purposes. Ideally, the information should be available in either five-year intervals or site milestone events (i.e., initial construction activities, demolition activities, etc.). However, available public and private historical sources do not always fulfill this goal, in which case, the closest approximation is made based upon the sources readily available at the time of historical review.

Historical Review Summary: From the historical information review discussed below, PEI concludes that the subject property was used as a rail yard for fuel and water since at least 1988 (reportedly back to 1870). The property historically has contained multiple railroad spurs and right-of-way tracks, as well as structures including an engine house (round house), water tanks, turntables (two), tool houses (two), oil house, and cattle yard (corrals). The structures were reportedly retired in 1947, but railroad spurs/tracks are evident in aerial photography through more current aerials photographs. Three railroad spurs were located on-site during the recent site reconnaissance. Most of the neighboring properties were observed in Sanborn maps as structurally developed during the 1880s, although uses have changed from residential to commercial over the years. No dry cleaners, gasoline stations, major landfills, military bases, manufacturing facilities, or heavy industrial businesses were identified on the subject property.

A. AERIAL PHOTOGRAPH REVIEW

Aerial photographs were reviewed to evaluate past land-use patterns of the subject property and vicinity. The photos were supplied by Environmental Data Resources, Inc. Copies of representative aerial photographs are included in the Site Maps appendix. This review revealed the following:

1942: The subject property is utilized as a railroad yard station. There are no structures readily observable on the subject property. At least three railroad spurs with rail cars are noted on the property entering from the east and terminating near the western border. Tree growth is noted at the southeast corner of the property. There are three structures abutting the property along the northeast border of the subject property (south of Lakeville) are observed. An additional rectangular warehouse building is observed parallel to the southern-most building, nearest to the subject property. Northwest:

immediately by East Washington Street, then by industrial-use structures. Northeast: immediately by Lakeville Street, then by commercial and industrial-use properties. Southeast: immediately by East D Street, then by industrial and commercial-use properties. Southwest: immediately by Copeland Street, then by commercial and industrial-use properties.

- 1952: This photograph has better resolution than the 1942 aerial photograph. At least six railroad spurs are noted on the subject property with rail cars on them. Conditions on the adjoining properties appear similar to those observed in the 1942 aerial photograph. The building abutting the northeast corner of the property has been demolished. The adjoining two warehouse structures to the southwest across Copeland have been built.
- 1965: The subject property is substantially vacant. Two rail cars are noted on the property on one of the five visible railroad spurs. Conditions at the adjoining properties appear similar to those observed in the 1952 aerial photograph with the exception of somewhat greater development in the general area. Some adjoining structures to the southwest have been removed.
- 1968: Conditions at the subject property and the adjoining properties appear similar to those observed in the 1965 aerial photograph. Two railroad cars are noted on the eastern portion of the property (near D Street), and four railroad cars are on the northern border of the subject property.
- 1973: Two railroad cars are noted on the eastern portion of the subject property (near D Street) and the northwestern portion of the property has some evidence of storage (vehicles, miscellaneous materials). Conditions at the adjoining properties appear similar to those observed in the 1968 aerial photograph with the exception of somewhat greater development in the general area. Notably, the apparent warehouse structures to the northwest have been removed and left as undeveloped land. A commercial building has been constructed to the southeast across D Street.
- 1982: The subject property remains substantially undeveloped. Three rail cars are noted in the central portion and two rail cars are noted on the northern border. Minor storage is noted between the railroad spurs at the northwestern end of the property. Conditions at the adjoining properties appear similar to those observed in the 1973 aerial photograph with the exception the adjoining undeveloped land to the northwest has been paved and redeveloped with a commercial retail shopping center.
- 1993: Conditions at the subject property and the adjoining properties appear similar to those observed in the 1982 aerial photograph. Rail cars are noted along the northern border.

- 1998: Conditions at the subject property and the adjoining properties appear similar to those observed in the 1993 aerial photograph.
- 2005: The subject property is generally undeveloped. There is evidence of two railroad spurs entering the property from the east across D Street. One spur runs parallel to the northern border. The other spur cuts diagonally towards the western corner. A tree/bush is noted at the southeastern corner. Some evidence of minor storage is noted on the central portion of the property. There are three structures on the northeast abutting the property along the northeast border of the subject property (south of Lakeville). The asphalt and landscaping appears recently developed. Northwest: immediately by East Washington Street, then by commercial-use structures. Northeast: immediately by Lakeville Street, then by commercial-use properties. Southeast: immediately by East D Street, then by undeveloped and commercial-use properties. Southwest: immediately by Copeland Street, then by vacant land and two commercial/warehouse buildings. .
- 2006: Conditions at the subject property and the adjoining properties appear similar to those observed in the 2005 aerial photograph with the exception of somewhat greater development in the general area.
- 2009: Conditions at the subject property and the adjoining properties appear similar to those observed in the 2006 aerial photograph, with the exception of that the property appears to be used for additional miscellaneous storage.
- 2010: Conditions at the subject property and the adjoining properties appear similar to those observed in the 2009 aerial photograph, with the exception that the subject property appears to be mostly vacant.
- 2014: The subject property is used as a contractor's storage yard surrounded by a fence. A gated entrance is noted at the northeast (for rail spurs and vehicles) and northwestern (for vehicles). Multiple piles of construction supplies (e.g., concrete rail, railroad ties) are noted on the property. Two railroad spurs enter the subject property from the east across D Street. The northern rail spurs splits into two parallel abutting spurs along the northern border. A second spur cuts diagonally towards the western corner. Rail cars are noted on all three spurs. The surrounding land usage is also similar to that observed during the site visit.
- 2019: The subject property is a structurally vacant property and storage uses have been removed. Residual railroad spurs are observed entering the property from the eastern entrance and traversing along the northern border, and the central portion of the property.

B. BUILDING PERMIT REVIEW

In an effort to evaluate the official construction and demolition history of the subject property, PEI reviewed city of Petaluma Building Department (PBD) information for the subject property address during the 2016 Phase I ESA. According to PBD, a permit for a temporary power pole was issued to SMART for the subject property in 2007. Other than that, there were reportedly no building permits on file for the subject property.

In a further effort to evaluate the development history of the subject property, PEI reviewed Sonoma County Assessor's (SCA) information obtained from the Chicago Title website. Review of this information indicated the Assessor's Parcel Number for the subject property is 007-131-003; the parcel consists of 4.48 acres. There are no improvements indicated and the Property Type/Use Code is identified as Road (right-of-way). The property was last transferred in March of 2004 to the Sonoma-Marín Area Rail Transit District. No other information significant to this report was obtained from the Assessor's data.

C. SANBORN FIRE INSURANCE MAP REVIEW

PEI reviewed Sanborn Fire Insurance Maps for the area of the subject property as provided by EDR. Sanborn Maps are detailed drawings that show the location and use of structures on a given property during specific years. These maps were originally utilized by insurance companies to assess fire risk, but are now utilized as a valuable source of historical and environmental-risk information. Copies of these maps, with the subject property indicated, are included in the appendix. The following information was obtained:

Date	Subject Property	Adjoining Properties
1888	The subject property appears mostly undeveloped (or the map is not complete for the interior of the parcel). A railroad spur labeled "SF&NPRR Switch" enters the property from the western corner and appears to terminate on the property. Another railroad spur enters from the northeastern corner and is labeled "Switch to McNear's W.Ho". The northeast abutting property is noted as a train depot structure. Two structures are noted in the eastern corner: a 2,000-gallon tank car in a tank house and sheep and cattle corrals.	Northwest: immediately by Washington Street, then by dwellings and associated structures. Northeast: immediately by Lakeville Street (name not completely shown in the Sanborn Map), then by undeveloped land with a dwelling to the north. Southeast: immediately by D Street (name not completely shown in the Sanborn Map; only shows "Adam"), then by a dwelling and associated structures. Southwest: immediately by Copeland Street, then by mostly undeveloped land except for a Petaluma Fruit Drying Establishment.
1894	The subject property is similar to the 1888 Sanborn map. Railroad right-of-ways are shown entering the property from the corners, but the	Northwest: immediately by Washington Street, then by dwellings and associated structures to the west or undeveloped land to the north. North: immediately by the

	<p>interior is of the property is not designated (illustration appears not complete). The northeast abutting property is noted as the SF&NPRR Depot with the main track abutting and parallel to Hopper Road (future Lakeville). A railroad tank, and cattle corral are noted at the southwest corner of the Adams (future D Street) and Hopper (future Lakeville).</p>	<p>intersection of Washington Street and Hopper Street (future Lakeville), then by a structure labelled Petaluma Livery. Northeast: immediately by Hopper Street, then by a hotel to the north, dwellings to the northeast or undeveloped land to the east. Southeast: immediately by Adams Street (D Street), then by dwellings and associated structures. Southwest: immediately by Copeland Street, then by structures related to a Petaluma Fruit Drying Co to the south west and a lumber yard to the west. The Petaluma Fruit Drying Co is illustrated with a main building housing five furnaces, a Sulphur house to the west, a distillery southwest of the main structure and an additional unidentified structure to the east near the intersection of Copeland and Adams</p>
1906	<p>The subject property is noted with a main railroad spur entering the property from the eastern corner. The spur splits into several spurs including three of which that exit the property crossing Washington to east and Copeland to the southwest.</p> <p>Several different structures onsite. A cylindrical structure labeled with “R.R.W.T” (water tank.)” and a rectangular structure labeled with “Sleeping Rooms” are noted in the northeastern the eastern corner. Cattle yards are noted in the central portion of the property south of the rail spurs. In the center of the central spur is a “turn table” for turning rail cars. At the western terminus of the central spur is a “Cal & N.W. RY Round House”. On the northern corner of the property are three small structures include two labeled “handcar house” and “Bell Tower/City Hose House”, and a small shed.</p> <p>A train depot building lies along the northeast border south of Hopper</p>	<p>Northwest: immediately by Washington Street, then by dwellings and associated structures to the west or a large commercial/industrial building noted with “Wine Cellars” and “Kegging and Shipping” to the north. North: immediately by the intersection of Washington Street and Hopper Street, then by a commercial structure. Northeast: immediately by Hopper Street, then by a hotel to the north, dwellings to the northeast or a large industrial structure which is labeled as used by Petaluma Gas and Electric Co) and the Western Refrigeration Co (cold storage) to the east. The structure to the east-northeast has a variety of additional substructures noted including an oil pump to the north, two 10,000-gallon tanks to the northeast and additional structures (two to the northeast and one to the east). Southeast: immediately by Adams Street, then by dwellings and associated structures. Southwest: immediately by Copeland Street, then by automobile related structures to the south, a general storage structure to the southwest and train-loading related structures to the west. The automobile structures are notably labelled with “Car Man’g,” “Oil & Paint room,” “Car barn & repairing,” “mach shop” and “Forge BLSM. [blacksmith]” The</p>

	(Lakeville).	general storage structure, previously the fruit drying location, is noted with four unused furnaces. Notable train-loading structures are labeled as “Ticket Office,” “Waiting room” and “Hay Loading Platform” with additional structures.
1910	The subject property is in similar condition to that observed in the 1906 Sanborn Map.	The adjoining properties appear in similar conditions to those observed in the 1906 Sanborn Map, except for the hotel to the north-northeast has been removed.
1923	<p>The subject property has been completely reconfigured. The railroad tracks originate from the middle of the southeastern border (as noted during the site visit) and include three separate spurs which branch into nine separate spurs. One spur extends across Copeland to the southwestern. Two abutting parallel spurs extend to the east across Washington. All the previous structures observed onsite in the 1910 Sanborn have been removed. An “oil house” and water tank are noted on the southeastern portion of the property. A platform is noted at the western border of the property.</p> <p>Three new structures have been built along the northeastern abutting property border with an additional structure south of the most southern building. From north to south, the buildings along the northeastern border are labeled with: “Passenger Depot” (including an office and waiting room), “Baggage Rm.,” and “American Railway Express” (noted with concrete flooring). The building south of the most southern building is labelled as “Freight Depot” and notes a conjoined platform extending to Adams Street to the southeast.</p>	<p>Northwest: immediately by Washington Street, then by commercial structures (lodging and a cabinet shop) to the west, dwellings and associated structures to the northwest or a large commercial/industrial building noted with “Feed Storage” and “Cold Storage” to the north. North: immediately by the intersection of Washington Street and Hopper Street, then by a multi-tenant commercial structure. Northeast: immediately by Hopper Street, then by a commercial building to the north, dwellings to the northeast or a large industrial structure associated with the Petaluma Ice and Cold Storage Co to the east. The structure to the east-northeast has a variety of labels over the substructures, notably “Auto Shed,” “Oil Ho.,” “Eng. Rm.” and “2-10,000 Gal W.TKs. [water tanks]” Southeast: immediately by Adams Street, then by mostly undeveloped land with scattered structures. Two structures are labelled with “Tie Shed” or “Hand Cars” and another is unidentifiable. Southwest: immediately by Copeland Street, then by automobile related structures to the south and train-loading related structures to the west. The automobile structures are notably labelled with “Car Mf’g,” “Paint & Oil,” “Car barn & repairing,” “mach shop,” “Car Painting,” “Oil & Paint Rm.,” “Sand Dryer” and “BLSM forge.” Notable train-loading structures are labeled as “Ticket Off.,” “Wait’g rm” and “Feed & Grain W.H.” with additional structures.</p>

1949	The subject property is in similar condition to that observed in the 1923 Sanborn Map. The previously noted Freight Depot on the northern abutting property has been removed.	Northwest: immediately by Washington Street, then by commercial structures (labeled as “Hotel” and “Iron Works”) to the west or a large commercial/industrial building noted as “Cold Storage” to the north. North: immediately by the intersection of Washington Street and Hopper Street, then by a multi-tenant commercial structure. Northeast: immediately by Hopper Street, then by an unidentifiable building to the north, dwellings to the northeast or a large industrial structure associated with the Western Refrigeration Co to the east. Southeast: immediately by East D Street, then by dwellings to the east or a commercial property to the south. The commercial property is labelled “wreck cars” and “auto rep.” Southwest: immediately by Copeland Street, then by automobile related structures to the south and train-loading related structures to the west. The automobile structures are notably labelled with “Private Truck Rep.,” “Carptr Shop & Planer,” “Car barn & repairing,” “mach shop,” “Paint & Oil,” “Sand Dryer” and “BLSM forge.” Notable train-loading structures are labeled as “Ticket Off.,” “Wait’g rm” and “Feed & Grain W.H.” with additional structures.
1959	The subject property is in similar condition to that observed in the 1949 Sanborn Map.	The adjoining properties appear in similar conditions to those observed in the 1949 Sanborn Map, except that: the dwellings to the east-southeast have been replaced with a restaurant; the auto repair facility to the south-southeast has been replaced with a building labeled “glazing”; additional structures have been developed to the south-southwest labeled as “Grain Mill” and “Stock Feed W.Ho.”; and the Feed & Grain warehouse to the west-southwest is now labeled as “Chem’l W.Ho.” and “Misc. Stge.”

1965	The subject property is in similar condition to that observed in the 1949 Sanborn Map except the structure labeled previously as “Railway Express Agency” is now labeled “Miscl Stge”. The address ranges associated with the subject property along the adjoining streets were: 201 Copeland, 300-332 Washington, 200 Hopper (Lakeview), and 333 D Street.	The adjoining properties appear in similar conditions to those observed in the 1949 Sanborn Map, except that the “Glazing” building to the south-southeast is now an Auto Body Shop and the structures previously labeled as “Chem’l W.Ho.” and “Misc. Stge.” In the 1959 Sanborn Map are obscured.
------	---	---

D. CITY STREET DIRECTORY REVIEW

As part of its 2016 Phase I ESA, PEI reviewed available historical city street directories at the Sherman Library in Corona Del Mar, California and/or other sources, in an effort to evaluate the prior uses and occupancies of the subject property. City street directories list property occupants by address, allowing a historical search of tenants on the subject property. That review revealed the following information:

SUBJECT PROPERTY DIRECTORY REVIEW		
Address	Date	Tenants Listed
315 East D Street	1950, 1956, 1958, 1961, 1967, 1972, 1977, 1987, 1992, 1997, 2008, 2012	Address not listed
348 Washington Street	1950, 1956, 1958, 1961, 1967, 1972, 1977, 1987, 1992, 1997, 2008, 2012	Address not listed

NEARBY PROPERTY DIRECTORY REVIEW		
Address	Date	Tenants Listed
361 Washington Street (northwestern adjoining)	1950, 1956, 1958, 1961, 1967, 1972, 1977, 1987, 1992, 1997, 2008, 2012	Address not listed
401 Washington Street (northern adjoining)	1950	Casperon O & Sons whol prod
	1956	Brentwood Egg Co
	1958	Better Food Serv; Dickson Van & Stge
	1961	Dickson Van & Stge; Zala John & Son sht mtl
	1967, 1972, 1977	Zala John & Son sht mtl
	1987	Casad Chiropractic; Contessi Ballet; Mr Video; Cunico Crist DC; We Care Chiro Clnc
	1992	Bonne Volonte Chiro; Noles David A

300 East D Street (southeastern adjoining)	1950, 1956, 1958, 1961, 1967, 1972, 1977, 1987, 1992, 1997, 2008, 2012	Address not listed

E. HISTORICAL TOPOGRAPHIC MAP REVIEW

Based upon the other historical sources available, the current nature of the subject property, and the confirmed previous usage, historical topographic maps were not reviewed for the subject property.

F. INTERVIEWS

As specified in ASTM E1527-2013, interviews will be conducted with parties including present land owners and occupants, past land owners and occupants, and adjoining property owners, as appropriate and as available. PEI interviewed the following parties during the course of this Assessment:

Laura Giraud, Real Estate Manager, (707/794-3330), lgiruard@sonomamarintrain.org

In 2016, PEI interviewed Ms. Laura Giraud, the real estate manager for Sonoma-Marin Area Rail Transit (SMART), in an effort to obtain information regarding the current and former uses of the subject property. Ms. Giraud stated that SMART acquired the subject property in 2004. Ms. Giraud provided PEI with copies of prior due diligence reports related to the environmental assessment of the property by Geomatrix on behalf of Union Pacific Railroad. She indicated that subsurface assessments had been completed on the property and reviewed by the San Francisco Regional Water Quality Control Board (SFRWQCB). She also provided PEI with a closure letter from the RWQCB dated February 20, 1998. Ms. Giraud indicated that SMART's knowledge about the subject property history is limited to what was provided in the prior environmental reports. She was unaware of any hazardous material contamination from the current operations since SMART purchased the property. Due to Ms. Giraud's limited knowledge of the property history at that time, she was not asked to complete an environmental questionnaire.

As part of this updated assessment, Ms. Giraud completed the environmental questionnaire as requested. Ms. Giraud stated the property was a former railyard with

a history of former underground storage tanks. She was unaware of the presence of releases of hazardous materials on the subject property.

PEI contacted Ms. Giraud via telephone to arrange access to the subject property. Ms. Giraud stated the railroad ties and rails had been removed. When asked whether any soil sampling or disposal had been completed as a result of the removal, Ms. Giraud stated that she believed a consultant (WRA) for the developer (Hines) had completed a report. She recommended that PEI contact them for that information.

Bruce Abelli-Amen, Baseline Environmental, (510-922-0069)

PEI interviewed Mr. Bruce Abelli-Amen of Baseline Environmental to discuss his observations related to the removal of the railroad spurs at the subject property. Baseline is a subcontractor for WRA, which works for Hines. Mr. Abelli-Amen stated that the work was completed by contractors working for SMART (Stacey Whitbeck Construction). He stated that he visually observed some of the track removals and indicated the site looks much "tidier". He stated that he was not aware of any environmental sampling, data or other environmental reports associated with the removal of the tracks. He stated he was unaware of whether ballast material or soil was removed as a result of the spur/track removal.

G. RECORDED LAND TITLE RECORDS

As specified in ASTM E1527-2013, recorded land titles are records usually maintained by the municipal or county recorder of deeds which detail ownership fees, leases, land contracts, easements, and other encumbrances attached to or recorded against the subject property. Due to state land trust regulations and laws, land-title records typically only provide trust names, owner's names, or easement holders, and not information concerning previous uses or occupants of the subject property. Therefore, this Assessment has relied upon other standard historical information sources which are typically more informative than recorded land titles. The Client also has not provided an environmental liens/activity usage limitation search for PEI's review, or requested that such a search be performed by PEI. According to the ASTM E1527-2013 guidelines, it is the responsibility of the User of this report to perform such a review.

The Client has not provided land title records, a title report, or an environmental liens/activity usage limitation search for PEI's review, or requested that such a search be performed by PEI. It would be prudent to perform a review of title documentation to evaluate potential use restrictions or other issues. According to the ASTM E1527-2013 guidelines, it is the responsibility of the User of this report to perform such a review.

H. DATA GAPS

As specified in ASTM E1527-2013, data gaps are defined as “a lack or inability to obtain information required by the standards and practices listed in the regulation despite good faith efforts by the Environmental Professional or prospective landowner to gather such information”. Data failure is one form of a data gap and occurs when historical research does not identify standard historical sources that are “reasonably ascertainable” and “likely to provide useful information to identify prior uses of the property”. Per ASTM E1527-13, the assessment must document data failure and give reasons why historical sources were not available or excluded (if applicable).

Based on PEI’s research, the following data gap(s) and/or data failure was/were identified:

Information relative to some prior investigations, deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the report User were not provided by the Client. Based on the other information reviewed as part of this assessment, it appears unlikely this data gap will significantly affect PEI’s report conclusions.

As discussed in Section VI-A, and other sections of this report, changes to the property over time, and/or conditions at the time of the site visit, limited PEI’s observations of historical (and possibly current) conditions at the subject property. These changes included, but are not necessarily limited to, the demolition of prior on-site structures (turntables, water tanks, tool houses, round house [engine house]), and the removal of several of the former railroad spurs (railroad ties and slag). In addition, regarding the historical businesses at the property, PEI was limited to review of available regulatory records and interviews of third-parties, since the prior business owners/operators associated with the railroad operations are unknown. These limitations may be considered data gaps that can affect the conclusions of this report.

The oldest reliable historical resource utilized for this report, an 1888 Sanborn map, indicated the subject property had railroad tracks entering the northeastern border (from Lakeville) and exiting the southwestern border (across Copeland). The interior of the property is not depicted. Because the historical resources utilized in researching the subject property did not provide information prior to the initial development of the subject property, data failure occurred. However, based on the information obtained from the readily available sources, it is unlikely that earlier sources would affect the conclusions of this report.

Historical data was not available in five-year increments and building permits were not available for the prior structures. However, based on the other sources reviewed, it is unlikely this data gap will impact the findings and conclusions of this assessment.

According to Sanborn Map and aerial photography, the property has been occupied by railroad operations since the late 1800s. It is not suspected, nor do the records reviewed suggest, that this former usage handled hazardous materials in large

quantities, or that significant hazardous material releases have occurred on-site (other than, as discussed in Section V-C). PEI's site visit observations also did not reveal obvious signs of past major chemical storage or releases. Since the potential chemical usage of these former occupants is technically unknown, this may be considered a data gap which can affect the conclusions of this report.

As previously discussed in Section III, prior environmental assessment(s) have reportedly been performed on the subject property. These reports reference "SPTCo structure records" that were used to describe historic structures on the property. These records were not available to PEI during this assessment. It is possible information contained in these records and prior reports (if any) could change PEI's conclusions or recommendations herein. If previous environmental documentation becomes available to the Client or subject property owner, a copy should be provided to PEI for review. PEI reserves the right to alter its conclusions herein based upon such new information. However, based upon PEI's historical research, site visit observations, and other research detailed in this Assessment, it appears unlikely potential previous reports would provide new information indicating other environmental concerns not discussed in this report.

SECTION V.
AGENCY RECORDS REVIEW

In an effort to evaluate whether the subject property and/or nearby sites have reported USTs, hazardous waste generation, or hazardous material releases, regulatory information from the federal, state, and local agencies listed below were reviewed. The database report was compiled by a third-party database provider and is reportedly the most recent database information available from each agency. A copy of the database report is included in the appendix. According to the database provider, their search of the various databases conforms to ASTM E1527-2013 Standards. However, the accuracy of the information provided by the agencies is not without error or omission, and the information listed is limited to that which was reported to or gathered by that agency. A limited discussion of the number of sites identified, and of their potential impact to the subject property, follows the database descriptions. In addition, PEI may request state and/or local regulatory agency information for the subject property, targeting those agencies most likely to provide information useful for this Assessment. The primary databases reviewed and their general search range criteria are below:

Federal Database	Search Range
USEPA NPL/Superfund databases:	Target Property to 1.0 mile
USEPA CERCLIS databases:	Target Property to 0.5 mile
USEPA RCRIIS facilities databases	
Corrective Action Sites:	1.0 mile
TSD Facilities:	0.5 mile
Generators:	0.25 mile
USEPA ERNS database:	Target Property
US Engineering Controls:	0.5 mile
US Institutional Controls:	0.5 mile
US DOD/FUDS databases:	1.0 mile
US Brownfields:	0.5 mile
State/Local Database	Search Range
State Superfund databases:	
EnviroStor/Response databases:	
Hist Cal-Sites:	1.0 mile
CA Bond Exp. Plan	
State Landfills database:	0.5 mile
State Cortese	0.5 mile
State/Local LUST databases:	0.5 mile
State Spills databases:	
SLIC:	0.5 mile
CHMIRS:	Target Property
State/Local UST/AST databases:	0.25 mile
State Liens database:	Target Property
State Deed database:	0.5 mile
State VCP database:	0.5 mile
State HAZNET database:	Target Property
Local Haz-Mat/Cleanup databases:	Target Property

A. REVIEW OF FEDERALLY REPORTED ENVIRONMENTAL DATA

The review of the federal environmental databases listed below attempts to identify environmental problem sites, activities, and occurrences from the records of the U.S. Environmental Protection Agency (USEPA). The detailed listing, and a map showing the location of the sites relative to the subject property, is included in the appendix.

National Priorities List (NPL) of Superfund Sites:

The NPL is the USEPA's database of hazardous waste sites currently identified and targeted for priority cleanup action under the Superfund program. This search includes Proposed NPL sites, Delisted NPL sites, and NPL Recovery sites. NPL sites may encompass relatively large areas. As such, polygon coverage for the site boundaries (for a majority of the NPL sites), as produced by the EPA may be provided.

National Priorities List Liens (NPL Liens):

The NPL Liens database contains a list of filed notices of Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability.

Superfund Enterprise Management System (SEMS):

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Superfund Enterprise Management System (SEMS) - Archive

SEMS-ARCHIVE tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available.

Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; only that based upon available information, the location is not judged to be potential NPL site.

RCRIS Corrective Action (RCRIS-CA) Sites:

The RCRIS-CA report contains information pertaining to hazardous waste handling facilities which have conducted, or are currently conducting corrective actions, as regulated by the Resource Conservation and Recovery Act.

Resource Conservation and Recovery Act Information System (RCRIS) Treatment, Storage, and Disposal (TSD) Facilities:

The RCRA program identifies and tracks hazardous waste from generation source to the point of ultimate disposal. The RCRIS-TSD facilities database is the composite of reporting facilities that transport, store, or dispose of controlled or hazardous waste. Identification on this list does not indicate that a site has impacted the environment.

RCRIS Generator Facilities:

The RCRIS program identifies and tracks hazardous waste from generation source to the point of ultimate disposal. The RCRIS generator facilities database (large and small quantity generators and various derivations) is the composite of reporting facilities that generate hazardous waste. Identification on these lists does not indicate that a site has impacted the environment.

Emergency Response Notification System (ERNS):

The ERNS database is the historical record of releases of hazardous substances reported to the USEPA.

EPA Engineering and Institutional Controls (US ENG/INST CONTROL) Sites:

These databases include listings of sites with engineering or institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are required as part of the institutional controls.

Department of Defense (DOD) Sites:

The United States Geological Survey (USGS) maintains the DOD database, which consists of federally owned or administered lands, administered by the DOD, that have an area equal to or greater than 640 acres of the United States, Puerto Rico, and the US Virgin Islands. Identification on this database does not necessarily indicate that a site has impacted the environment.

Formerly Used Defense Sites (FUDS):

The U.S. Army Corps of Engineers database contains a listing of locations of Formerly Used Defense Sites (FUDS) where the U.S. Army Corps of Engineers is actively working or will take necessary cleanup actions. Identification on this database does not indicate that a site has impacted the environment.

US Brownfields Sites (Brownfields):

The US Brownfields site includes brownfields properties addressed by Cooperative Agreement Recipients (CAR) and brownfields properties addressed by Targeted Brownfields Assessments (TBA). EPA's TBA program is designed to help states, tribes, and municipalities minimize the uncertainties of contamination often associated with brownfields. Cooperative Agreement Recipients (states, political subdivisions, territories, and Indian tribes) become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the USEPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

CERCLA Lien Information (LIENS 2):

A Federal Superfund Lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Facility Index System (FINDS) sites:

The FINDS Report is a computerized inventory of all facilities that are regulated or tracked by the U.S. Environmental Protection Agency. These facilities are assigned a unique identification number that serves as a cross-reference for databases in the EPA's program system. Identification on this database does not indicate that a site has impacted the environment.

B. REVIEW OF STATE-REPORTED ENVIRONMENTAL DATA

A general description of the databases searched and the corresponding responsible state or local agency. The detailed listing, and a map showing the location of the sites relative to the subject property, is included in the appendix.

State Hazardous Waste Site (SHWS) Databases:

State Hazardous Waste Site records are the states' equivalent to CERCLIS (refer to CERCLIS discussion).

California EnviroStor Databases:

The Department of Toxic Substances Control's (DTSC's) Cal-Sites database contains potential or confirmed hazardous substance release properties. The CalSites database was created by the DTSC, but DTSC no longer up-dates the CalSites database. The CalSites database was replaced by the EnviroStor database. The DTSC's RESPONSE database identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk at the time of listing. The DTSC's Site Mitigation and Brownfields Reuse Program's (SMBRPs) EnviroStor database identifies sites that have reported contamination or sites for which there may be reason to investigate further. The database includes the following site types: Federal Superfund Sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in Cal-Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Solid Waste Facilities, Landfills and Recycling Facilities:

The State Solid Waste Facilities and Landfills and Recycling databases include an inventory of active, closed, and inactive solid waste disposal facilities, landfills, refuse transfer stations, and recycling facilities (non-landfill sites).

Historical Cortese Database:

The Historical Cortese list contains hazardous waste and substance sites compiled pursuant to Assembly Bill 3750 (Cortese, Chapter 1048, Statutes of 1986). The information included in this list was compiled with information from the California DTSC, the State Water Resources Control Board, and the California Waste Management Board. This database contains primarily LUST sites, although other types of sites may be included.

Leaking Underground Storage Tanks (LUSTs):

State and/or local agencies maintain inventories of LUSTs (also known as LTANKS) in a statewide database.

State/Local Spills Databases:

The Spills, Leaks, Investigations, and Cleanup (SLIC) Cost Recovery Listing program is designed to protect and restore water quality from spills, leaks, and similar discharges. The database(s) included in this section are the states' equivalent to the ERNS report and generally contain information for reported hazardous material/waste surface or groundwater contamination release investigations reported in that state or locality. The California Hazardous Material Incident Report System (CHMIRS) database contains information on reported hazardous waste material incidents (accidental releases or spills).

Underground Storage Tanks (USTs)/Aboveground Storage Tanks (ASTs):

USTs are regulated under Subtitle I of the RCRA (as well as various state regulations), and must be registered with the State Underground Storage Tank Program. These are registered USTs only, and identification on this list(s) does not necessarily indicate that the site has impacted the environment. This search includes review of the Active UST Facilities (UST) database, Facility Inventory Database (CA FID UST), Hazardous Substance Storage Container Database (HIST UST), and SWEEPS UST Listing database (SWEEPS UST). Also potentially included in this section are sites identified on historic UST databases that are no longer maintained. The AST database is the State Water Resources Control Board's Hazardous Substance Storage Container Database for registered ASTs. Note: The nature of this listing indicates a UST and/or AST has been

reported at the respective address; however, the nature of the UST and/or AST listing does not indicate whether the presence of the UST(s) and/or AST(s) has resulted in an impact to the environment. UST/AST sites with reported releases are typically identified on other listed databases which indicate a reported release or environmental impact and are discussed accordingly.

Environmental Liens Listing (LIENS):

The Department of Toxic Substances Control's (DTSC) LIENS database includes a listing of property locations with environmental liens for California where DTSC is a lien holder.

Deed Restriction Listing (DEED):

The Department of Toxic Substances Control's (DTSC) DEED database includes a listing of Site Mitigation and Brownfields Reuse Program (SMBRP) Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed/Land Use Restrictions. The SMBRP list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active, and some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Voluntary Cleanup Program (VCP):

The DTSC's VCP database contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee the investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

State and/or Local Agency Generators (HWTS/HAZNET):

The Hazardous Waste Tracking System (HWTS or HAZNET) data is extracted from copies of hazardous waste manifests kept by the Cal-EPA-DTSC. These manifests track hazardous wastes from generation source to the point of ultimate disposal. Permit data is generally culled from local agency database(s) for hazardous material handlers and generators. Identification on these lists does not

indicate that a site has impacted the environment and the data has not always been verified for accuracy by the DTSC or local agencies.

National Pollutant Discharge Elimination System (NPDES) Database:

The National Pollutant Discharge Elimination System (NPDES) includes sites that have had or have a permit for the discharge of wastewater or stormwater issued by the Regional Water Quality Control Board or a local agency (e.g., Public Works Department). Identification on this database does not necessarily indicate that a site has impacted the environment, only that permitted discharge(s) have occurred.

State and/or Local Agency Air Emissions Database (EMI):

The EMI data is extracted from permits for air emissions kept by the state or local air resources agency. The nature of the EMI listings indicates the emission of volatile materials to the air; however, the nature of the EMI listings does not indicate whether the related activities resulted in an impact to the environment. Sites with reported releases are typically identified on other listed databases which indicate a reported release or reported impact to the environment (e.g., LUST, SLIC, Cortese) and are discussed accordingly.

Drycleaners Database:

The California Department of Toxic Substance Control (DTSC) maintains a listing of drycleaners and drycleaner related facilities that have EPA ID numbers. EPA ID numbers are assigned to facilities with certain SIC codes (power laundries; garment pressing and cleaner's agents; etc.). The nature of the Drycleaners listings indicates the facility has been given an EPA ID number due to a SIC code assignment; however, the nature of the Drycleaners listings does not indicate whether the related activities resulted in an impact to the environment. Sites with reported releases are typically identified on other listed databases which indicate a reported release or reported impact to the environment (e.g., LUST, SLIC, Cortese) and are discussed accordingly.

Notify 65 Database:

Notify 65 listings generally indicate that some type of release and/or groundwater impact have occurred which was required to be reported under Proposition 65 rules. These types of listings typically indicate groundwater has been impacted by the listed site; however, details are typically not provided in this type of database.

EDR Historical Auto Stations, Historical Cleaners, & Manufactured Gas Plants Databases:

These databases include former gas stations, auto repair shops, dry cleaners, Laundromats, and manufactured gas plants that are typically no longer active. Identification on these databases does not necessarily indicate that such activities actually occurred at that site or that a site has impacted the environment.

Local Regulatory Databases:

The County Environmental Health Department or equivalent local Certified Unified Program Agency (CUPA) typically maintains lists that may include some or all of the following: hazardous material handlers, hazardous waste generators, USTs, ASTs, LUST sites, and other potentially contaminated sites. Unless identified as a LUST or other contaminated site, identification on this database typically does not indicate whether or not a site has impacted the environment.

Database Discussion – Below is a brief discussion of those sites listed in the database as at or nearby the subject property, and potentially sites at a further distance that, in PEI’s experience, have an obvious potential to impact the subject property (e.g., NPL sites).

SUBJECT PROPERTY Database Listings		
Listing Name/Address	Database(s)	Discussion
Northwestern Pacific Railroad 348 E Washington St	CPS-SLIC, FINDS, CERS	SLIC database indicates potential media affected as waste oil, motor oil, hydraulic oil, lubricating oil and the media affected is listed as under investigation. However, as of 2/18/1998 the case is listed as Complete – Case Closed. For additional information related to this listing, see Sections III-A and V-C.

Selected OFF-SITE Database Listings				
Site Name/Address	Distance (miles/direction)	Gradient Position	Database(s)	Status
Dairymen’s Feed Supply Co-oper 323 E Washington St	784 ft WNW	Up-gradient	SWEEPS UST CA FID UST AST	No release reported
Discussion: This site is the western adjoining property across Washington Street. SWEEPS UST database indicates three tanks: one 10,000-gallon diesel tank; one 5,000-gallon leaded motor vehicle fuel; and another active tank without specific capacity or usage information. CA FID UST database information indicates the site is an active UST site. The AST database indicates aboveground storage tanks with total capacity of 10,000-gallons. This site				

is listed on the EDR database as a LUST site. However, according to Geotracker, this site is a LUST site with a status listed as “completed – case closed as of May 2000”. No file information (e.g., closure summary or prior monitoring reports) was available on Geotracker. Based on the regulatory status and cross-gradient location, it does not appear that this site has caused significant environmental impact to the subject property.

Bar Ale Inc. 15 & 17 Copeland St	57 ft South	Down- gradient	LUST, ENF Hist CORTESE Hist UST, CERS	LUST Case Closed
-------------------------------------	-------------	-------------------	---	---------------------

Discussion: This site is located on the southern adjacent property across Copeland Street. It is identified on the LUST database for a gasoline release discovered at this site in 1990 that affected other groundwater (uses other than drinking water). The case was closed in 1999. This site is identified on the HIST CORTESE database due to the LUST identification. The Hist UST database notes a 500-gallon unleaded fuel tank. According to the records on Geotracker, this site was leased from the railroad more than 45 years ago. A gasoline and diesel UST were excavated from the site and hydrocarbon impact was evident. 200 cubic yards of soil were excavated. 13 borings were drilled and 4 completed into monitoring wells. Due to groundwater quality it was not deemed a drinking water source. Additional remedial activities included the excavation of 3,373 tons of soil and 12,000 gallons of groundwater. Residual concentrations of minor concentrations of petroleum hydrocarbon constituents (8.7 ppb DIPE) remain in groundwater. No TPHg or BTEX constituents were noted. Residual soil impact was less than 53 mg/Kg TPHg. Closure was granted due to impact not representing a threat to future public health, ecological, and water resources threat. Groundwater was reported to be shallow (approximately 2 to 7 feet bgs) with a variable direction of flow. The groundwater monitoring wells closest to the subject property on the border of Copeland Street (e.g., MW-3, -4, -5 and -6) were non detect for BTEX constituents in the last monitoring event. Only MW-5 had a low concentration of DIPE (8.7 ppb). Based on the data reviewed, it does not appear that this site has caused a significant environmental impact to the subject property.

Haystack Landing 215 Weller & 15& 19 Copeland	279 ft SSW	Down gradient	US Brownfields Finds	No release reported
---	------------	------------------	-------------------------	------------------------

Discussion: This is the south-southeastern adjoining property. The site is listed on the Brownfield database by the Petaluma Community Development Commission. Data indicates the following “The Site has been used for commercial and industrial purposes since at least 1885. Early uses included storage of hay and lumber, a fruit dryer, and a distillery. There are two structures at the Site; a 5,700 square-foot building on Parcel 7 at 19 Copeland Street and a 4,000 square-foot building on Parcel 8 at 15 Copeland Street”. No release has been reported.

Lind Marine Inc. 100 E D Street	497 ft SSE	Down- gradient	US Mines	No release reported
------------------------------------	------------	-------------------	----------	------------------------

Discussion: This is the southeastern adjoining property. US Mines database indicates multiple citations are listed between 1989 and 2009; however, no releases are reported for this property. In addition, PEI did not observe obvious indications of prior assessments

associated with this property.				
Various Listings for 361 E Washington St	208 ft NW	Up- gradient	EDR Hist Auto	No release reported
Discussion: This site is currently occupied by O'Reilly Auto parts and is located on the northwest adjoining property across Washington Street. This site is identified in 1999 as Grand Auto Supply Petaluma, Tires Plus Total Car Care in 2003 and Kragen Auto Parts in 2009. The nature of Historical listings indicates auto stations have operated at the respective location; however, the nature of the historical listings does not indicate whether the former activities resulted in an impact to the environment. Sites with reported releases are typically identified on other databases which indicate a reported release or reported impact to the environment (e.g., LUST, SLIC, CORTESE) and are discussed accordingly. This site does not appear on such databases.				
Longs Drug Store 365 E Washington St	433 ft NW	Up- gradient	RCRA-LQG FINDS ECHO	No release reported
Discussion: This site is currently occupied by CVS Pharmacy and is located on the northwest adjoining property across Washington Street This site is identified as a large quantity generator of hazardous waste and no violations have been reported at this site and it appears in FINDS database due to RCRA-SQG listing, Registry ID #110002623126. ECHO database indicates Envid 1000978361.				
Unocal Service Station 440 E Washington St	466 ft North	Up- gradient	Notify 65 LUST Hist CORTESE SWEEPS UST CA FID UST	Completed – Case Closed
Discussion: This site is currently occupied by a Starbucks coffee located approximately one block north of the subject property. LUST database listing indicates potential contaminants: gasoline, waste oil, motor oil, hydraulic oil and lubricating oil. The potential media affected is listed as an aquifer used for drinking water supply. The release was discovered in 1989 and as of 11/14/2012 the status is listed as Completed – Case Closed. This site is identified on the HIST CORTESE database due to the LUST identification. UST database indicates Facility ID 600074 and the permitting agency as the City of Petaluma. SWEEPS UST database indicates three tanks: two 10,000-gallon tanks for regular unleaded motor vehicle fuel and a 550-gallon waste oil tank. CA FID UST database information indicates the site is an active UST site. According to Geotracker, this depth to groundwater is noted at approximately 8.5 to 11.5 feet bgs with a southerly direction of flow (toward the subject property). However, groundwater monitoring wells closest to the subject property (MW-12 7 MW-13) indicated no TPH-g or BTEX constituents and limited MTBE impact. Based on the data reviewed, it does not appear that this site has caused a significant environmental impact to the subject property.				

West Bay Bavarian; Sandy & Bobs Trucking; Jerry & Don's Pump & Well 151 Lakeville	356 ft NNW	Up- gradient	SWEEPS UST CA FID UST Hist UST	Completed - Case Closed
<p>Discussion: The SWEEPS UST listing does not give useful information. Hist UST listing indicates two 1,000-gallon tanks meant for unleaded motor vehicle fuel. No release has been reported. CA FID UST database information indicates the site is an active UST site. As a LUST site, this property is located approximately one block north-northwest for the subject property (across Washington & Lakeville). The LUST database listing indicates a gasoline release was discovered at this site in 1987, the release affected an aquifer used for drinking water supply and as of 9/5/2012 the status is listed as Completed – Case Closed. This site is identified on the HIST CORTESE database due to the LUST identification. Based on the data reviewed and the reported southwesterly direction of groundwater flow at that site (crossgradient), it does not appear that this site has caused a significant environmental impact to the subject property.</p>				
Ash Bag Company/ Bare Ale Inc. 224 Weller	402 ft SSW	Cross- gradient	LUST Hist CORTESE ENF CA FID UST, Hist UST CHMIRS	Completed - Case Closed
<p>Discussion: This site is located one block southwest of the subject property, south of Copeland Street and Weller Street. The LUST database listing indicates a gasoline release was discovered at this site in 1989, the release affected other groundwater (uses other than drinking water), and as of 7/13/2012 the status is listed as Completed – Case Closed. This site is identified on the HIST CORTESE database due to the LUST identification. According to information on Geotracker, a groundwater monitoring report from October 2009 indicates the depth to groundwater at 2 to 4 feet bgs with a southwesterly direction of flow. Closure was granted in July 2012. Based on the data reviewed and the reported southwesterly direction of groundwater flow at that site (crossgradient), it does not appear that this site has caused a significant environmental impacted the subject property.</p>				
Coin Amusement 416 E D St	375 ft ENE	Cross- gradient	LUST Hist CORTESE	Completed - Case Closed
<p>Discussion: This site is located approximately one block northeast of the subject property across D Street and Lakeville. The LUST database listing indicates a gasoline release was discovered in 1995, the release affected an aquifer used for drinking water supply, and as of 1/15/2008 the site is listed as Completed – Case Closed. This site is identified on the HIST CORTESE database due to the LUST identification. According to information on Geotracker, the direction of groundwater flow is reported as variable. The groundwater monitoring wells closest to the subject property (MW-3 and MW-4) did not indicate significant petroleum hydrocarbon impact. Based on the data reviewed, it does not appear that this site has caused a significant environmental impact to the subject property.</p>				

Lakeville Auto Body 322 Lakeville St	390 ft East	Cross- gradient	EDR Hist Auto	No release reported
Discussion: This site is identified between 1999 and 2010. The nature of Historical listings indicates auto stations have operated at the respective location; however, the nature of the historical listings does not indicate whether the former activities resulted in an impact to the environment. Sites with reported releases are typically identified on other databases which indicate a reported release or reported impact to the environment (e.g., LUST, SLIC, CORTESE) and are discussed accordingly. This site does not appear on such databases.				
Petaluma Transmissions 322 Lakeville St	390 ft East	Cross- gradient	RCRA-SQG FINDS, EMI ECHO	No release reported
Discussion: This site is identified as a small quantity generator of hazardous waste and no violations have been reported at this site and it appears in FINDS database due to RCRA-SQG listing, Registry ID #110009548579. The EMI database indicates a maximum of one ton per year of total organic hydrocarbon gases and reactive organic gases between 1990 and 2009. The ECHO database listing indicates Envid 1000596005.				
Various 440 E Washington St	449 ft North	Up- gradient	EDR Hist Auto	No release reported
Discussion: This site is identified in 2006 as Grand East Washington Petroleum Inc. and union 76 in 2008. The nature of Historical listings indicates auto stations have operated at the respective location; however, the nature of the historical listings does not indicate whether the former activities resulted in an impact to the environment. Sites with reported releases are typically identified on other databases which indicate a reported release or reported impact to the environment (e.g., LUST, SLIC, CORTESE) and are discussed accordingly. This site does not appear on such databases.				
Washington Street Union 440 E Washington St	449 ft North	Up- gradient	Hist UST HAZNET	No release reported
Discussion: The HAZMAT database listing indicates 0.22 tons of an aqueous solution with total organic residues 10 percent or more in the year 2000. No information is given for the Hist UST database listing.				
Diamond Lumber Inc 101 E Washington St	500 ft West	Cross- gradient	Hist UST HAZNET	No release reported
Discussion: The HAZMAT database listing indicates 0.3625 tons of other organic solids in the year 2014. No information is given for the Hist UST database listing.				

Based upon the distance, status, type of listing and/or down- to cross-gradient location, the remaining database listings appear unlikely to have significantly environmentally impacted the subject property.

Unlocatable / Unplottable Sites:

Unplottable “orphan” sites are those which could not be plotted by the database provider using conventional geo-coding methods, typically because the information provided in the original government database was unclear, incorrect or missing. A listing of orphan sites (if any) appears at the end of the database, immediately after the last plottable site description.

PEI reviewed the orphan list for sites with the same name as the subject property (if applicable) and/or the same or similar property address. This review is inherently limited by the incomplete and/or possibly incorrect data reported in the orphan listings. For orphans apparently not related to the subject property, only those obviously located adjoining or within a short distance that may affect the property are discussed. Orphan sites which are also listed in the plotted section are not re-discussed.

PEI’s review of the unlocatable / orphan list revealed no obvious sites of concern listed at or adjoining the subject property.

C. LOCAL AGENCY RECORDS SEARCH

The following is a discussion of the results of PEI’s written records requests, online regulatory database review, and/or personal/telephone contacts (as applicable) made to state and/or local government agencies in an effort to obtain potential information relevant to the subject property. Please note that, as discussed in the ASTM E1527-13 Standard, Section 8.1.5, records are considered available within a *reasonable time and cost*, only if available within 20 calendar days of the request and for a nominal cost (only covering the source’s cost of retrieving and/or duplicating the information):

San Francisco Regional Water Quality Control Board (SFRWQCB):

According to Ms. Melinda Wong of SFRWQCB, files for the subject property are available online via Geotracker. PEI reviewed information on file for the subject property address(es) as available on Geotracker. The following is a brief summary of information on file with the SFRWQCB which is most significant to this ESA. Please also note that this review was general in nature, was focused on potential hazardous materials usage, and does not constitute a regulatory compliance or health and safety review. Copies of selected records are included in the appendix.

April 29, 1997 – Letter from Geomatrix Consultants to the Union Pacific Railroad Company detailing the background of the site, proposed program of investigation, and the schedule of reporting.

June 26, 1997 – Letter from the Union Pacific Railroad Company to the SFRWQCB submitting and proposing a workplan for soil and groundwater investigation.

July 10, 1997 – Letter from the SFRWCB to Geomatrix consultants approving a workplan concerning soil and groundwater sampling at the subject property.

November 12, 1997 – Letter from Geomatrix Consultants to the SFRWCB requesting additional time in submittal of soil and groundwater sampling results in order to collect additional samples to test for arsenic.

December 2, 1997 – Letter from the SFRWCB to Geomatrix consultants approving a workplan to install 5 additional borings to sample for arsenic.

January 15, 1998 – Soil and Groundwater Sampling Results Reports prepared by Geomatrix Consultants, submitted to the SFRWCB. Based upon the analytical results, Geomatrix Consultants concluded: petroleum hydrocarbons characterized as motor oil were detected at low concentrations in shallow soil at the site; PNAs were not detected except for one sample (in which the concentration was found to be two orders of magnitude less than the preliminary remediation goals); detected metals were within background concentrations; arsenic concentrations were within background concentrations; and that groundwater has not been impacted by petroleum hydrocarbons. Based upon these conclusions, Geomatrix asserted no further investigation or remediation is recommended.

February 20, 1998 – Letter from the SFRWCB to the Union Pacific Railroad Co. stating “Based on the information you have provided... no further investigation or remediation at the subject site will be required by this Regional Board.” The related case closure review further stated that “Closure for the site is appropriate based on the analytical results that indicate that the site has not been significantly impacted and does not pose a threat to human health and the environment.”

Sonoma County Environmental Health Department (SCEHD):

PEI contacted the SCEHD in an effort to evaluate whether hazardous material incidents, USTs, and/or LUSTs have been reported at the subject property address(es). Ms. Paula Kramer of the SCEHD referred PEI to an online database of records. No hazardous material incident, UST or LUST information is on file for the subject property.

City of Petaluma Fire Department (PFD):

PEI contacted the PFD in an effort to evaluate whether hazardous material incidents, USTs and/or LUSTs have been reported at the subject property address(es). No response was received as of the date of this report. However, according to the 2016 Phase I ESA, Mrs. Debra of the PFD informed PEI that no hazardous material incident, UST, or LUST information is on file for the subject property.

California EPA - Department of Toxic Substances Control (DTSC):

PEI contacted the DTSC in an effort to evaluate whether hazardous material incidents, UST, and/or LUSTs have been reported at the subject property addresses. Ms. Liang Yu Ma of the DTSC informed PEI that no hazardous material incident, UST, or LUST information is on file for the subject property addresses.

PEI also reviewed CalEPA-DTSC's Hazardous Waste Tracking System (HWTS) online database (<http://hwts.dtsc.ca.gov>) in an effort to identify potential hazardous waste generation/disposal activities associated with the subject property address(es). That search revealed no records listed for the subject property other than those reported in the database, if any.

California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) Maps:

PEI reviewed DOGGR maps in an effort to identify whether oil or gas wells have been reported in the vicinity of the subject property. According to the DOGGR website mapping interface, no oil or gas wells are reported in the immediate subject property area (within 1/8-mile).

D. VAPOR ENCROACHMENT SCREENING

PEI has performed a Vapor Encroachment Screening (VES) for the subject property as discussed in ASTM Standard Practice E2600-10. The purpose of this VES was to identify existing Vapor Encroachment Conditions (VECs) affecting the subject property, as defined by E2600-10. PEI has reviewed known or reported releases of petroleum hydrocarbon or other constituents of concern (COCs, including volatile organic compounds - VOCs) to subsurface soils and/or groundwater within the vicinity of ASTM-specified distances from the subject property, as reported within the radius report. However, it should be noted that since this review only addresses sites with reported releases in the radius report, it does not address potential unreported impact from nearby sites, if any.

Based on the PEI's review, the following can be concluded about the sites with known releases relative to a vapor encroachment condition (VEC) at the subject property.

--	Number of Sites	VEC Exists	VEC Can Be Ruled Out
Petroleum Releases (<1/10 mile)	5		Unocal Service Station 440 E Washington St <hr/> Bar Ale Inc. 17 Copeland St (Case closed; down-gradient) <hr/> Jerry & Don's Pump & Well 151 Lakeville (Case closed) <hr/> Ash Bag Company 224 Weller (Case closed; cross-gradient) <hr/> Coin Amusement 416 E D St (Case Closed; cross-gradient)
VOC Release (<1/3 mile)	0		x

Based upon the above review, a VEC at the subject property from off-site database listings has not been identified.

E. TRIBAL RECORDS SEARCH

According ASTM E1527-2013, records for local and tribal records shall be checked to satisfy all appropriate inquiry for this assessment. The following is a discussion of the results of PEI's written records requests, online regulatory database review, and/or personal/telephone contacts (as applicable) made to tribal governmental agencies in an effort to obtain potential information relevant to the subject property:

The subject property is not located on tribal property and therefore no inquiry was necessary.

SECTION VI.

SITE VISIT OBSERVATIONS

A. SURFACE CHARACTERISTICS

At the time of the site visit, the subject property consisted of an approximate 4.48-acre parcel of land. No buildings were observed on the property. The limited natural vegetation on the property appeared to be in good condition with no signs of unnatural or chemically induced stress. Minor surface staining was observed in limited areas of the property and was likely the result of leaking vehicles. No pits, ponds, lagoons, swales, or surface impoundments potentially containing hazardous materials were observed on the subject property, although standing water was noted on the property from recent rainfall. Weather conditions at the time of the site visit consisted of partly cloudy skies, with temperatures in the 70s. The soils of the subject property were wet from recent rain.

The rectangular shaped parcel is accessed by ramps on the northwestern and southeastern borders of the property on Washington and D Streets. No access was available from Copeland Street or the commercial property fronting Lakeville Street. The parcel was surrounded by a chain link fence. The property currently was substantially vacant and undeveloped. Former use of as a contractor's storage yard as noted in 2016 has been removed. Approximately 100 feet of the northwestern border of the property fronting East Washington Street was accessible to the public and outside of the chain link fence. This area was generally bare soil or covered with limited gravel for parking. A locked gate accesses the fenced area at the northwest corner of the property. Two locked gates access the fenced portion of the property at the southeastern border.

Two railroad spurs terminate at the locked gates along D Street. The former spurs that were noted on the property in 2016 had been substantially removed including the steel track and wooden railroad ties. Cobble/slag, gravel and minor debris (e.g., rusted metal connectors, and railroad tie fragments) remain in the area of the former rail spur. No indications of significant soil excavation or removal were observed during the site visit.

The southeast corner of the property is covered with ankle to knee-high vegetation and contains an area of elevated soil piles. PEI did not observe obvious signs of hazardous materials on the soil pile, although due to the vegetation, the full extent of the pile's surface could not be seen. Adjacent to the soil pile is old track switching equipment. Other than this switching equipment, there was no obvious visual evidence of prior historic railyard structures or use at the subject property.

During the site visit, the exterior of the subject property was inspected. Areas not visited and/or where observations were limited included surface soils covered with gravel and cobble. In addition, alterations to the property (e.g. building demolition, railroad track removal, etc.) have occurred over time, limiting observations of previous structural items and systems configurations.

B. WASTEWATER AND STORMWATER MANAGEMENT

During the site inspection, the subject property was undeveloped land, and no wastewater generating activities were observed.

C. POTABLE WATER SUPPLY AND SEWER SERVICE

During the course of the site visit, no obvious evidence of active or abandoned water supply wells or septic systems was observed.

D. STRUCTURE CONSTRUCTION

With the possible exception of a metal electrical cabinet at the southeast border of the property, the subject property no permanent structures were located on-site at the time of the site inspection. No structures or evidence of past structures (e.g., foundations, etc.) were noted.

E. BUSINESS OPERATIONS DESCRIPTION

According to the Petaluma Planning Department, the subject property is located in an area being evaluated as part of the Central Petaluma Specific Plan. It is designated as Area 7 “Area bounded by Weller Street, Washing Boulevard, D Street and Rail Depot”. The plan indicates possible residential development in the area of the subject property. At the time of the site visit, the subject property was occupied by as a contractor’s storage yard. These tenants do not handle hazardous materials and/or generate hazardous wastes above *de minimus* quantities. PEI’s research indicates no dry cleaners, gasoline stations, military bases, industrial facilities, or major manufacturing operations have occupied the subject property.

From the historical information review performed, PEI concludes that the subject property was used as a rail yard for fuel and water since at least 1888 (reportedly back to 1870). The property historically has contained multiple railroad spurs and right-of-way tracks, as well as structures including an engine house (round house), water tanks, turntables (two), tool houses (two), an oil house, and cattle yard (corrals). The structures were reportedly retired in 1947, but railroad spurs/tracks are evident in aerial photography from that time through more current aerial photographs. No data was found to indicate fueling facilities (including ASTs or USTs) were historically located at the subject property.

In 1996 and 1997, subsurface assessments at the subject property included the drilling of 24 borings (6 in 1996, and 18 in 1997) at the property in areas previously identified as areas of potential concern. The field work was completed by a contractor (Geomatrix) on behalf of Union Pacific Railroad (UPRR). A summary of the work performed is discussed in Section III-A and excerpts of the reports are included in the appendix of this report. Low concentrations of petroleum hydrocarbons (as diesel and motor oil) were detected in shallow soil at the site. One shallow soil sample contained 1,2,3-cd pyrene at concentrations below regulatory action levels. Metals concentrations were reportedly within background concentrations. Groundwater was reportedly not impacted by petroleum hydrocarbons, BTEX,

or related constituents. The data was presented to the San Francisco Regional Water Quality Control Board (SFRWQCB) for review which resulted in the property address 348 E. Washington being listed as a SLIC site under the name Northwestern Pacific Railroad. The SFRWQCB issued a “Case Closure” letter on February 20, 1998 which stated “no further investigation or remediation at the site will be required by this Regional Board”.

Shallow soil sampling completed in 2016 include 14 borings which detected minor concentrations of total petroleum hydrocarbons in the diesel range (TPH-d). Phenol was detected in one shallow (~18 inches deep) soil sample at concentrations exceeding environmental screening levels (ESLs). In addition, additional soil samples contained elevated concentrations of lead and arsenic above published ESLs. PEI concluded that in the event that future excavation is contemplated, appropriate measures, in accordance with applicable regulation, should be taken to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Performance of soil testing and/or development of a formal Soil Management Plan for any property redevelopment may be appropriate, to address soil stockpiling and soil profiling to ensure proper soil re-use, disposal and implementation of worker safety measures.

SECTION VII.
HAZARDOUS MATERIAL/WASTE OBSERVATIONS

A. HAZARDOUS MATERIALS HANDLING AND STORAGE

No other significant hazardous materials handling or storage were observed on the subject property during the site visit.

B. WASTESTREAM GENERATION, STORAGE AND DISPOSAL

No significant hazardous waste generation, storage, or improper hazardous waste disposal was observed on the subject property. These materials should be properly disposed by a licensed hazardous waste disposal contractor.

C. SOLID WASTE DISPOSAL

During the site visit, no municipal waste dumpsters were observed at the subject property.

D. ABOVEGROUND STORAGE TANKS (ASTs)

Visual or physical indicators of current or former ASTs were not observed at the subject property during the site visit.

E. UNDERGROUND STORAGE TANKS (USTs)

As discussed in the Section V (Agency Records Review) of this report, no USTs were reported at the subject property. In addition, no visual or physical evidence of current or past USTs was discovered during the site visit in the readily visible areas of the property. In particular, PEI searched for: fill pipes, vent pipes, manways, manholes, access covers, concrete pads not homogeneous with surrounding surfaces, concrete built-up areas potentially indicating pump islands, abandoned pumping equipment, or fuel pumps. However, limitations to observations included coverage of the site by gravel, weeds and stored items.

SECTION VIII.
OTHER POTENTIAL ISSUES OF CONCERN

A. PCB-CONTAINING EXTERIOR ELECTRICAL TRANSFORMERS

Exterior pad-mounted, pole-mounted, or below-ground (vaulted) electrical transformers were not observed at the subject property during the site visit.

B. OTHER PCB-CONTAINING INTERIOR OR EXTERIOR EQUIPMENT

At the time of the site visit, the subject property consisted of a storage yard with no permanent structures.

D. LEAD-BASED PAINT (LBP)

At the time of the site visit, the subject property consisted of a storage yard with no permanent structures. Therefore, suspect lead based paint covered building materials were not observed.

E. LEAD IN DRINKING WATER

At the time of the site visit, the subject property consisted of a storage yard with no permanent structures. Therefore, drinking water plumbing systems related to structures were not observed.

F. AIR QUALITY

Unusual smells, noxious odors, or visual emissions were not observed during the inspection of the subject property. However, these observations are general in nature and should not be construed as an air quality assessment.

G. RADON

According to the USEPA, the general area of the site has a predicted average indoor screening level of less than the EPA guideline action level of 4.0 picoCuries per liter of air (EPA Radon Zone Level of 2 or 3). Therefore, based upon the reported subsurface characteristics of the area, the subject property exhibits a low potential for high-level radon exposure.

H. RAILROAD RIGHTS-OF-WAY

Several railroad right-of-ways and spurs were identified on the subject property during the assessment and historically. In addition, records indicate historical buildings including turntables, round (engine) houses, tool houses, and water tanks. There are several potential environmental risks associated with railroad rights-of-way, including the usage of herbicides, pesticides, petroleum materials and related heavy metals (e.g. arsenic) to maintain the tracks, as well as the potential spillage of hazardous materials from railcars. During the site visit, no

obvious evidence of hazardous material spillage or contamination was observed along the section of railway adjoining the subject property. Based on the long time historic use of the property as a rail yard and the known arsenic and lead impact identified from prior assessments, the rail use is and associated impact is a recognized environmental condition. Due to the proposed potential residential development of the property, PEI concludes appropriate measures, in accordance with applicable regulation, should be taken to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Performance of soil testing and/or development of a formal Soil Management Plan for any property redevelopment may be appropriate, to address soil stockpiling and soil profiling to ensure proper soil re-use, disposal and implementation of worker safety measures.

SECTION IX.
ADJOINING PROPERTY OBSERVATIONS

As discussed below, based upon limited observations of the adjoining properties from publicly accessible locations, as well as a review of federal, state, and local environmental databases, none of the adjoining properties appeared to have significantly environmentally impacted the subject property at this time.

Historically, nearby properties utilized various hazardous materials, and some of these sites may have impacted the environment (refer to Section V). However, based upon the limited database information available to PEI, these sites do not appear to have significantly environmentally impaired the subject property at this time.

A. ADJOINING PROPERTIES MATERIALS STORAGE

Visual observations of the portions of the adjoining properties visible from the subject property or public roadways did not indicate the exterior storage of hazardous materials or wastes. No indications of spillage or staining were observed in the observable exterior areas of these sites. Additionally, no obvious indications of improper hazardous material storage or unusual or suspicious materials handling or storage practices were observed.

B. ADJOINING PROPERTIES WASTESTREAM DISPOSAL

No unusual or suspicious wastestream disposal activities were observed on the portions of the adjoining properties visible from the subject property or public roadways.

SECTION X.
STATEMENT OF THE ENVIRONMENTAL PROFESSIONALS

This Assessment has been performed for the exclusive use and benefit of the addressee(s) identified on the cover of this report, or agents directly specified by it (them), for the transaction at issue concerning the subject property described in this report. This Assessment shall not be used or relied upon by others without the prior written consent of Pinnacle Environmental, Inc. and of the addressee(s) named on the cover of this report. In addition to any limitations described in this report, it is also subject to the terms and conditions of the signed service agreement with the Client.

STATEMENT OF QUALITY ASSURANCE

The conclusions contained within this Assessment are based upon site conditions that were readily observed and were reasonably ascertainable and present at the time of the site visit, and upon the other research performed as detailed within this report. The findings and conclusions represent our best professional opinion and judgment. In addition, the conclusions and recommendations stated in this report are based upon personal observations made by PEI and upon information provided by others and such information is presumed accurate.

Signature of Environmental Assessor – *Peter K. Cloven, CEM #1313, REA #07347:*

Signature/Environmental Assessor

STATEMENT OF QUALITY CONTROL

I declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in 40 CFR §312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature of Environmental Professional - *David W. Copp, CHMM, REA #05148:*

Signature/Environmental Professional

PINNACLE ENVIRONMENTAL, INC.
QUALIFICATIONS OF
PERSONNEL INVOLVED IN THIS ASSESSMENT

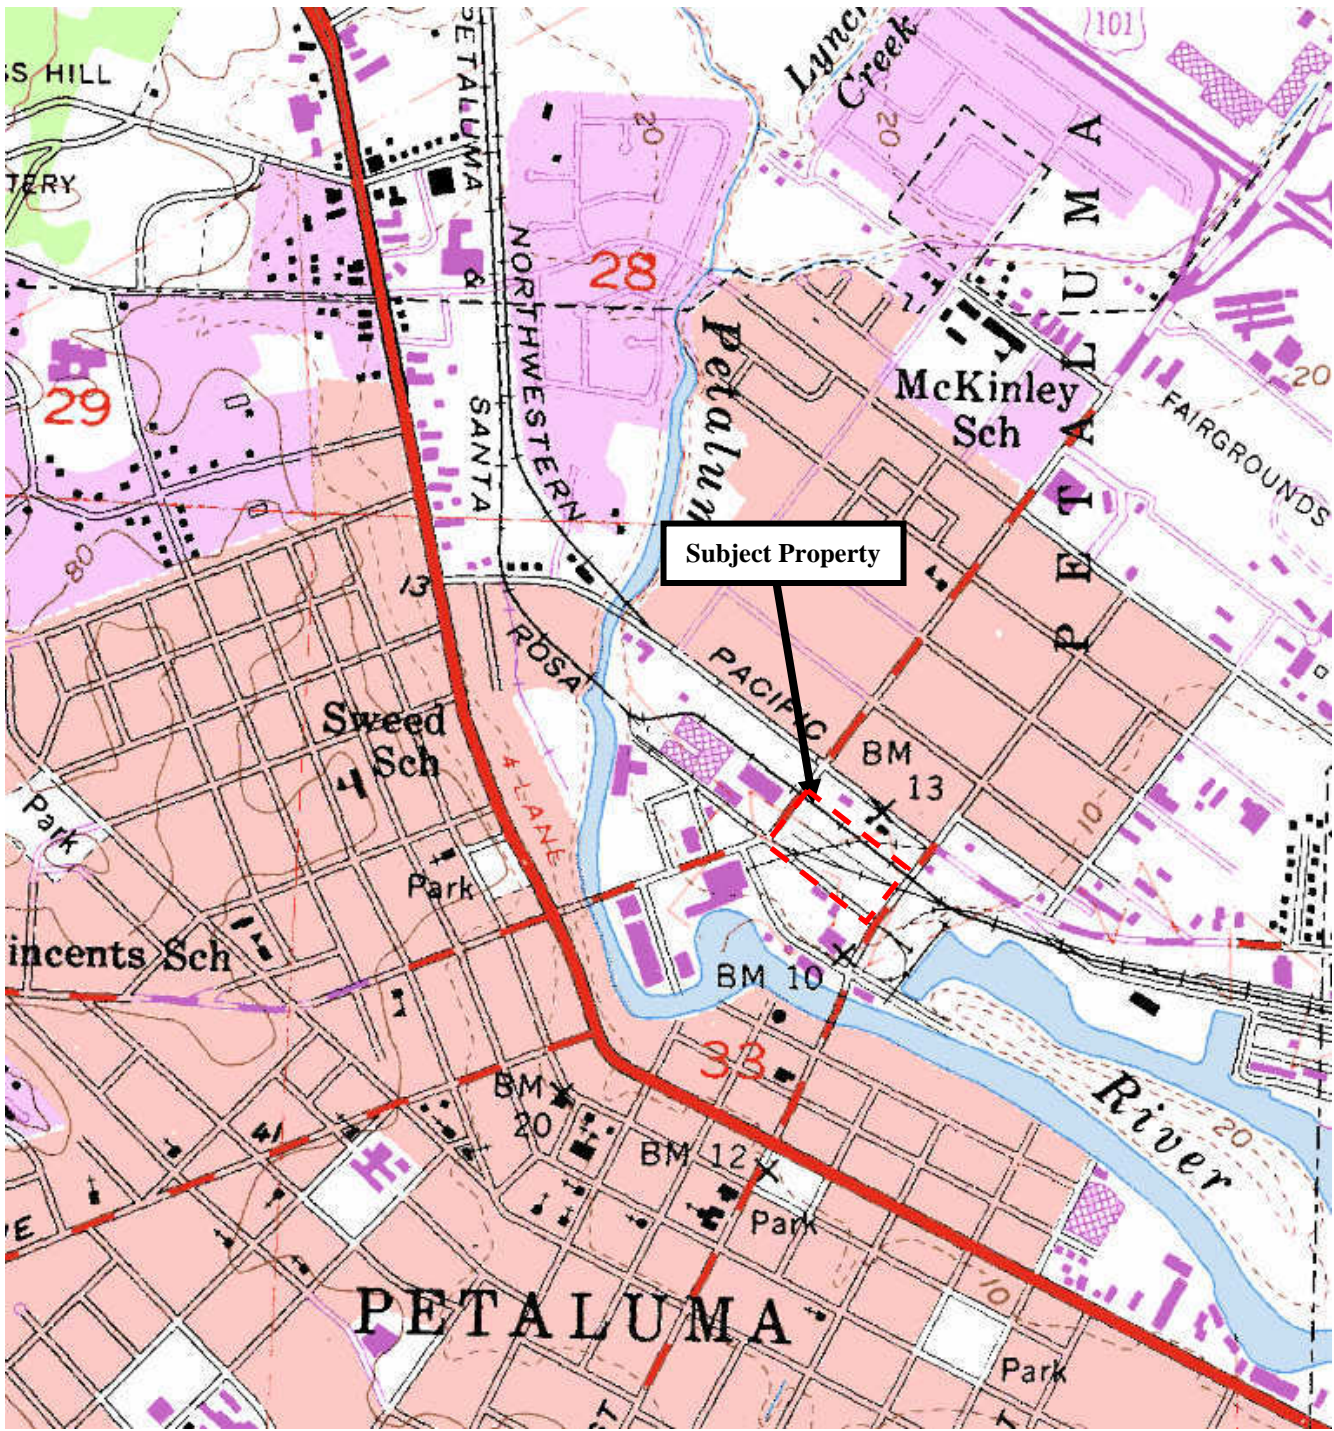

DAVID W. COPP, CHMM, EP, PRINCIPAL ASSESSOR

Mr. Copp is a single-point-of-contact manager that can provide on-going client service from project start to finish. Mr. Copp earned a B.A. degree in Environmental Studies from California State University, San Bernardino (1987) and a Certificate in Hazardous Materials Management from the University of California, Riverside (1992). Mr. Copp has over 25 years of experience within the environmental consulting industry. Mr. Copp is responsible for performing project work (Phase I and II Environmental Assessments [Phase I ESA's], Property Condition Assessments, etc.), as well as business development and customer service roles. Mr. Copp has extensive experience in performing ESAs (personally over 3,000 projects in 23 states), Phase II Investigations, and Asbestos and Lead Surveys. Mr. Copp's multi-disciplinary skills in environmental consulting have been instrumental in the completion of Phase I ESAs and other projects on time and within budget. Mr. Copp holds (or has held) certifications as a Registered Environmental Assessor, USEPA 40-hour HAZWOPER, and has training as an AHERA asbestos inspector, and Cal-DHS lead-based paint inspector/assessor. Mr. Copp co-manages the environmental operations of PINNACLE including scheduling, client services and development, QA/OC, field work, and the development of ESA protocols and report formats. Mr. Copp is also a member of the ASTM committee on ESAs.

PETER K. CLOVEN, EP, C.E.M. #1313, PRINCIPAL ASSESSOR

Mr. Cloven is a single-point-of-contact manager that can provide on-going client service from project start to finish. Mr. Cloven earned a B.A. degree in Biochemistry from the University of California, Berkeley (1986). He has more than 25 years of experience within the environmental consulting industry including project sales, and staff/personnel management. His project experience includes over 1,000 ESAs, turn-key management of underground storage tank projects, multiple Phase II site characterization projects (including soil gas surveys, Geoprobe® sampling of soil and groundwater, hollow stem auger sampling and monitoring well installation), Risk Based Corrective Action (RBCA) risk assessment, remediation, design implementation, operation and maintenance, and site closure. Mr. Cloven's clients have included the US Air Force, US Army Corp or Engineers, Nevada Department of Transportation, Sacramento Regional Transit District, insurance companies, lending institutions, and attorneys. Mr. Cloven has also performed environmental audits and prepared stormwater and air quality permits for industrial facilities. Mr. Cloven specializes in client relations, client services, and client technical consulting. Mr. Cloven also co-manages the environmental operations of PINNACLE including scheduling, client services and development, QA/OC, field work, and the development of ESA protocols and report formats. Mr. Cloven is a Registered Environmental Assessor in the state of California, Certified Environmental Manager in the state of Nevada, and has ASTM certification in RBCA assessment and USEPA 40-hour HAZWOPER training.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 91 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 18 SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 03/05/2020 has revealed that there is 1 ABANDONED MINES site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/03/2020 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 55 HIST CORTESE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 03/12/2020 has revealed that there are 10 Notify 65 sites within approximately 1 mile of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 04/20/2020 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Inc. leased the site from the railroad company more than 45 years ago. The site was used by Bar Ale, Inc. as a parking facility for grain trucks. One gasoline and one diesel UST were removed in 1990 & 1991. 200 cubic yards of soil combined were excavated from both UST excavations. Groundwater (GW) in both excavation pits contained visible hydrocarbon sheen and black heavy oily substances. Soil samples after the excavations contained up to 4,300 mg/kg of TPH-g, 2,200 mg/kg of TPH-d, and 46 mg/kg of benzene. Samples of the pit GW contained up to 8,000 ppb of TPH-g, 790,000 ppb of TPH-d, & 1,200 ppb of benzene. On 4/26/91, 575 gallons of the oily substance was pumped from the excavation pit. The oily substance continued to flow into the excavation from the sidewalls. In Sept. 1991, 13 soil borings were drilled with four converted to monitoring wells (MWs). Fourteen additional borings were drilled on 11/9/98. Grab GW samples from the borings contained up to 31,000 ppb of TPH-g, 1,800,000 ppb of TPH-d, 440,000 ppb of TRPH, 5,400 ppb of benzene, and non-detectable (ND) concentrations of MTBE. Two additional MWs were installed on 10/1/99. A water well survey indicated that there were 4 water wells within 1,000 feet of the site. Two of the water wells had been capped and is no longer in service. One water well is 700 feet north of the site and is used for cleaning activities and also provides water to the bathroom. The last water well is 1,000 feet SE of the site and is not used for drinking water purposes. The specific conductance in GW from the MWs is up to 9,100 umhos/cm indicating that shallow GW is not a potential source of drinking water. A Feasibility Study/Corrective Action Plan (FS/CAP) dated 11/29/06 was prepared for the site, went through a 30-day public comment period, and approved by the Water Board in a letter dated 2/14/07. Implementation of the CAP was initiated in April 2008 and completed in July 2008. Remedial activities included the excavation and disposal off-site of 3,373 tons of soil, 12,000 gallons of groundwater, and one previously unknown UST. Final confirmation soil samples contained a maximum of 53 mg/kg of TPH-g, 110 mg/kg of TPH-d, 0.12 mg/kg of benzene, and non-detectable concentrations of MTBE. A GW monitoring and sampling event on Sept. 15, 2008, contained non-detectable concentrations of TPH-g, TPH-d, BTEX, and MTBE, and 8.7 ppb of DIPE. Based on the following, case closure for this site is considered to be appropriate: (1) The site has been adequately investigated; (2) The primary sources (the 3 USTs that formerly occupied this site and 575 gallons of oily free product) were removed in 1990, 1991, and 2008. No free product was reported after completion of the 2008 remediation; (3) The secondary sources, the surrounding impacted soil and GW (about 200 cubic yards and 3,373 tons of soil and 12,000 gallons of impacted GW) were removed in 1990, 1991, and 2008; (4) The residual soil pollution is minor (a maximum of 53 mg/kg of TPH-g, 110 mg/kg of TPH-d, 0.12 mg/kg of benzene, and non-detectable concentrations of MTBE); (5) The residual GW pollution is minor (non-detectable concentrations of TPH-g, TPH-d, BTEX, and MTBE, and 8.7 ppb of DIPE); and (6) The known current residual concentrations in the soil and groundwater do not represent a current or future public health, ecological, and water resources threat.

 Property Description:

The current Site addresses include 215 Weller Street, 15 Copeland Street, and 19 Copeland Street. The former addresses include 17 Copeland Street. The Site is bounded on the north by Copeland Street, on the west by East Washington Street, on the south by Weller Street and on the east by East D Street. The Site has been used for commercial and industrial purposes since at least 1885. Early uses included storage of hay and lumber, a fruit dryer, and a distillery. There are two structures at the Site; a 5,700 square-foot building on Parcel 7 at 19 Copeland Street and a 4,000 square-foot building on Parcel 8 at 15 Copeland Street.

Local Agency: SONOMA COUNTY LOP
File Location: Local Agency Warehouse
Local Case Number: 00001373
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Two 1,000-gallon underground gasoline tanks were removed in April 1987. Excavated soil was aerated on site and placed as backfill in the tank pit. The soil and groundwater plume has been defined. Remediation was performed by overexcavating contaminated soil. Approximately 175 cubic yards were excavated and disposed off site on October 26, 2010. Post-remedial monitoring began in the first quarter 2011. Site Closed on September 5, 2012.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<p>File Location: Local Case Number: Potential Media Affect: Potential Contaminants of Concern: Site History:</p>	<p>Regional Board 00002463 Other Groundwater (uses other than drinking water) Gasoline</p> <p>The site is located in a commercial/light industrial warehouse on the banks of the Petaluma River. The site is bordered to the north by a large, vacant lot, to the south by Petaluma River, to the west by commercial buildings, and to the east by a gravel parking lot. The site has historically been used for the production of bags to hold animal feed in addition to a number of other commercial enterprises. It is our understanding that the future land use will remain as light industrial/commercial. The site is underlain by 2 4 feet of gravelly clay fill materials underlain by Bay Mud. One 550-gallon UST was removed from the site on August 30, 1989. The tank had most recently stored gasoline, but may have stored diesel and/or waste oil in the past. Holes were observed in the bottom of the UST and floating product (due to rinsate leaking from the bottom of the tank) was also observed; significant odor and discoloration of the soil were also noted. The UST was 46 years old and it was bottomed in a gray clay. Soil samples were collected from the base of the excavation at a depth of 7.5 feet below ground surface (bgs) and at a depth of 6.5 feet bgs. The soil samples contained up to 380 mg/kg of O&G, 4,300 mg/kg of TPH-g, 130 mg/kg of TPH-d, and 30 mg/kg of benzene. On 8/17/90, a grab groundwater (GW) sample collected from the excavation contained 14,000 ppb of TPH-g, 2,800 ppb of TPH-d, 590 ppb of benzene, and ND concentrations of O&G and TPH-mo. On 3/14/91, over-excavation of petroleum hydrocarbon contaminated soils at the former UST excavation was performed. 600 gallons of the impacted GW from the excavation was pumped into a plastic holding tank. The excavation was enlarged laterally and increased in depth to 10 feet bgs. About 20 cubic yards of soil were removed, stockpiled, and characterized for appropriate disposal. Soil samples collected from two of the sidewalls and the bottom of the excavation contained up to 810 mg/kg of O&G, 1,800 mg/kg of TPH-g, 62 mg/kg of TPH-d, 10 mg/kg of benzene, and ND concentrations of TPH-mo. On October 22 through 24, 1991 six borings B-1 through B-6 were advanced. Three of the borings were completed as monitoring wells (MWs). On 8/24/99, three soil borings B-7 through B-9 were advanced with one of the boring completed as a MW. Periodic groundwater monitoring and sampling events have been performed at the site since January 1992. Most recently, groundwater samples were collected from the MWs during December 2008. GW flow directions vary greatly at the site which may be a result of tidal influence and/or the effects from the over-excavation. Of the four MWs, MW-1, MW-3, and MW-4 have been consistently non-detect. Contaminant concentrations trends for well MW-2 appear to be gradually decreasing. During site investigation activities, grab groundwater samples were collected from two soil borings. Analytical results for the groundwater samples collected from boring B-7 located near Petaluma River were below the laboratory reporting limits. Analytical results for the groundwater samples collected from boring B-9 located within the over-excavation boundaries indicated the presence of 590 ppb of TPH-g, 260 ppb of TPH-d, and 5.4 ppb of benzene. The former excavation appears to be acting as a reservoir; as it appears that the over-excavation was backfilled with 3/4" gravel. Based on the following, case closure for this site is considered to be appropriate: (1) The site has been adequately investigated; (2) The primary source (the UST that</p>

formerly occupied this site) was removed in 1989 and no further storage of petroleum hydrocarbons has occurred since that time; (3) The majority of the secondary sources (the surrounding impacted soil and GW) were also removed in 1989; (4) A soil and GW impact is present at the Site; however, impacted soils and groundwater are defined and plume detected in MW-2 is stable and does not appear to be migrating towards Petaluma River based upon the consistent non detect results from MW-4 and the grab GW sample from boring B-7 in the 20 years since the UST was removed. It also appears that impact to soil from petroleum hydrocarbons is limited to the vicinity of the March 1991 over-excavation; (5) Active remedial methods have been deemed not warranted at the Site by the USTCF (6) There is little likelihood that the shallow GW will be used as a drinking water supply in the near future; and (7) The residual concentrations in the soil and GW apparently do not represent a current or future public health, ecological, and water resources threat.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude: -122.637502431
Status: Completed - Case Closed
Status Date: 09/27/2019
Case Worker: LCW
RB Case Number: 49-0096
Local Agency: SONOMA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 00002465
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: 8 groundwater monitoring wells, 21 remediation wells, 2 soil vapor wells and 2 sub-slab soil vapor wells were installed. No wells have been destroyed. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 5a. The consultant performed a fate and transport analysis in which no scenario could be produced that would threaten identified sensitive receptors and contaminant concentrations will decrease to below water quality objectives in a reasonable time frame. Vapor Intrusion to Indoor Air Criteria is met by criteria 2a scenario 4. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3b. The LOP licensed professional generally concurs with the assessment. Remediation History: Excavation occurred from 9/15/03 through 10/3/03 removing approximately 1,600 cubic yards. An ozone sparge pilot test occurred from 5/15/05 through 5/29/05. Ozone sparging occurred from 3/18/09 through 12/23/09 (520 hours). Sparging was terminated due to fugitive emissions into the building. Dual Phase Extraction (DPE) occurred from 6/5/14 through 6/20/14. Approximately 32,888 gallons of groundwater was removed and disposed of under permit to sewer. Approximately 710 lbs of TPH and 11.19 lbs of benzene vapor was removed. DPE occurred from 5/13/15 through 6/16/15. Approximately 69,500 gallons of groundwater was removed and disposed of under permit to sewer. Approximately 951 lbs of TPH and 29.4 lbs of benzene vapor was removed. DPE occurred from 5/8/17 through 7/10/17. Approximately 183,600 gallons of groundwater was removed and disposed of under permit to sewer. Approximately 1480 lbs of TPH and 30 lbs of benzene vapor was removed. An onsite domestic water supply well was destroyed on 2/5/98. It was sampled once prior to destruction and was non detect for all constituents. An unused well located at 125 Lakeville Street was sampled 10/24/18 and was non detect for all constituents. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Date: 03/31/1993
Comments: PEA is completed and Further Action is required therefore, Hazard Ranking is also recommended for AWP.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/12/1993
Comments: Pacific Gas and Electric (PG&E) owned a portion of a Manufacturing Gas Plant (PG&E Petaluma Site), located on approximately one third of an acre, on the northwest corner of First and D Streets in Petaluma. The property is now currently used as an electrical substation. Both groundwater and soil are contaminated with arsenic 13 ppm and lead 1300 ppm and polynuclear hydrocarbons 1.1 ppm. Contamination, which has been documented to a portion of the site, exceeded the state action level. The site will require remediation. Additional information of other areas of the site is necessary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/18/1987
Comments: SITE SCREENING DONE SITE PREVIOUSLY PART OF MANUFACTURED GAS PLANT. CONTAMINANTS FOUND INCLUDE PNA'S (0.9PPM), PB(13PPM), AS(2.8PPM), HG(0.25 PPM). SITE SCORED FOR MEDIUM PRIORITY PA RATIONALE FOR PENDING STAT: ON CERCLIST.

 Case Type: LUST Cleanup Site
 Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609730719
 Global Id: T0609730719
 Latitude: 38.236304458
 Longitude: -122.630604279
 Status: Completed - Case Closed
 Status Date: 09/29/2016
 Case Worker: LCW
 RB Case Number: 49-0340
 Local Agency: SONOMA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: 00027828
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Heating Oil / Fuel Oil
 Site History: site history excerpts taken from the case file: 2007 two underground storage tanks (usts) containing bunker fuel were removed; the tanks were constructed of redwood. Over-excavation of the tank pit was performed at the time of tank removal to remove overburden and impacted soil surrounding the former usts. Final excavation dimensions were approximately 15 ft x 30 ft x 9ft deep. Site Management Requirements: Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department has been notified. Contingency planning is required for worker safety and waste disposal if excavating in areas of residual contamination. The Building/Planning Department has been notified. A Soil and Groundwater Management Plan has been submitted and is on Geotracker. The site meets the Low Threat Closure Policy as follows: All General

Local Agency: SONOMA COUNTY LOP
File Location: Local Agency Warehouse
Local Case Number: 00001438
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpts from "Corrective Action Implementation Plan for Exxon Service Station 7-0240" (Environmental Resolutions, Inc., March 21, 2000) The site is located on the southern corner of East Washington and Edith Street in Petaluma, California. A product recovery system was installed by Texaco and operated from June 1982 through December 1985. Recovery wells R1, R2, and R3, and a groundwater P&T remediation system were also installed and operated at the site by Texaco. The P&T system began operation in June 1988. It is ERI's understanding that the system operated until late 1997, when it was shut down for unknown reasons. On April 1, 1999, ERI performed a DPE pilot test utilizing two extraction wells (groundwater monitoring well MW3 and vapor point VPI), and six observation wells (MW2 through MW5, VP2, and R2) at the subject site. Additional notes by SCLOP staff: The Dual Phase Extraction was started on June 1, 2001 and is still operating. The site meets the Low Threat Closure Policy as follows: All General Media Criteria are met. Groundwater Specific Criteria is met by 5a. Vapor intrusion to Indoor Air Criteria is met by the exemption as the site is an active fueling station. Direct Contact and Outdoor Air Exposure is met by 3a. A risk assessment was

Environmental Interest/Information System:

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Regional Board
Local Case Number: 00002462
Potential Media Affect: Under Investigation
Potential Contaminants of Concern: Gasoline
Site History: Site is situate on a mostly commercial / light industrial block in Petaluma's downtown "theater" district. The Site is almost entirely filled by a former shop building made of wood and steel. Directly north of the Site a former mill building that houses RiverTown Feed & Pet Country Store, a local feed merchant, abutts the Site's only building, an older former shop structure. On the southern side, an open lot is used as a stock yard for unknown supplies. On this lot, two (2) 1,000-gal former underground storage tanks (USTs) were housed. Across the street (2nd street) facing the Site, is an old veterinary hospital building which resides on a block containing a former UNOCAL service/gas station (at 201 Petaluma Blvd South, # 6152, GeoTracker case ID: 49-0199 - in OPEN REMEDIATION status).

 Potential Contaminants of Concern: Benzene, Gasoline
 Site History: The Site is a portion of the larger Basin Landing development that occupies about 5 acres of land located between South Petaluma Boulevard and the Petaluma River. Several environmental investigations conducted in the late 1990s and early 2000s defined the lateral and vertical extent of impacted soil at the Site by petroleum hydrocarbons. Two groundwater plumes were identified at the Site: in the center of the Site and the other in the southern corner of the Site near the intersection of Second and C Streets. The sources of both the soil and groundwater contamination are unknown. In both cases the principal contaminants of concern (COCs) are TPHg and benzene, toluene, ethylbenzene, and xylenes [BTEX]. Remedial action was conducted in January 2003. About 808 tons of soil were excavated and removed from two areas in the southern and south-central portions of the Site. Confirmation soil sampling showed that relatively low concentrations of the COCs remained in the sidewalls and bottom of the excavations, with none in concentrations exceeding the remediation goals. The Site was subsequently developed for mixed uses: commercial on the ground floor and residential upstairs. This case meets the State Water Boards Low-Threat Underground Storage Tank Case Closure Policy, as shown below. General Criteria 1) The unauthorized release is located within the service area of a public water system. Also, the groundwater beneath the Site is probably not a potential source of drinking water due to high electrical conductivity measurements of 7600 a%mhoh/cm; 2) The

S118822731

release consists only of petroleum products; 3) The primary release (from unknown sources) has been stopped; 4) No free product has been observed in groundwater samples at the Site; 5) A Tier I Environmental risk assessment including a conceptual site model assessed the nature, extent, and mobility of the released contaminants; 6) The secondary source hydrocarbon-impacted soil - has been removed to the extent practicable; 7) MtBE has not been detected in soil or groundwater at the Site and the results have been reported in accordance with Health and Safety Code Section 25296.15; 8) A nuisance as defined by Water Code section 13050 does not exist at the Site. Media Specific Criteria Groundwater-Specific Criteria: The regulatory agency (Regional Water Board) concludes that under current and reasonably anticipated near-term future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment because: Groundwater beneath the Site is not a potential source of drinking water due to high electrical conductivity The groundwater pollution is not getting to the Petaluma River in concentrations of concern Groundwater samples collected downgradient of the former excavations in May 2014 are below both the Environmental Screening Levels and Maximum Contaminant Levels. Petroleum Vapor Intrusion to Indoor Air: The Site meets Scenario 4 Direct measurement of soil vapor concentrations are below the LTCP commercial numerical criteria for benzene and ethylbenzene with a bioattenuation zone based upon oxygen content in soil vapor of at least 20%. Direct Contact and Outdoor Air Exposure: The regulatory agency (Regional Water Board) concludes that the Site is a low-threat for direct contact and outdoor air exposure based on: The low concentrations of residual TPHg and BTEX at the Site including benzene and ethylbenzene that meet the LTCP direct contact / outdoor air exposure numerical criteria; The site management requirements are listed in Section IV above (Site Management Requirements); The onsite building covers most of the Site. According to a Tier 1 Environmental Risk Assessment for the entire Basin Street Development conducted in 2002 and the current Site conditions we find: The release responsible for the petroleum-impacted soil and groundwater occurred more than 50 years ago and that the plume has migrated little since the release occurred. The clayey composition of soil beneath the Site and few permeable lenses are not conducive for the lateral or vertical migration of contaminants. The composition of the soil is not conducive for the upward migration of soil vapor from source contaminants. The Petaluma River is not threatened by the plume. No wells or other sensitive receptors are present in the area. In addition, groundwater beneath the Site is not considered to be a source for potable water. Most of the Site is covered by concrete or asphalt, effectively removing the potential exposure to contaminants. Because of the public use of the common areas in the development is transitory in nature, the potential for exposure is minimized. There are not playgrounds or areas where the public congregate for extended time periods. In addition, the covering of the Site by the development reduces storm water infiltration effectively removing the primary mechanism by which contaminants are driven from soil into groundwater. The removal action conducted at the Site in 2003 and subsequent development mitigated the potential for impacts to human health or the environment. An investigation of soil vapor, indoor air, ambient air, and groundwater was conducted in May 2014. The only contaminant of concern detected above Environmental Screening Levels (ESLs) was benzene in indoor air. Because the indoor air

concentrations of benzene in indoor air was similar to the concentrations in outdoor air and because the soil vapor concentrations of benzene were significantly below residential ESLs, it was concluded that the benzene detected in indoor air was due to benzene in ambient outdoor air and not from a subsurface source.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpts from "Site Conceptual Model" (Secor, April 4, 2008) In February 1987, five underground storage tanks (USTs) were removed from the site (three 4,000-gallon steel gasoline USTs, one 6,000-gallon fiberglass gasoline UST, and one 280- gallon steel waste oil UST) (Harding Lawson Associates [HLA] 1987). During removal of the tanks, visible soil contamination was observed in the gasoline underground storage tank pit floor. Total petroleum hydrocarbons as gasoline (TPHg) were reported in soil samples collected from the gasoline UST excavation at concentrations ranging from 12 to 200 milligrams per kilogram (mg/kg) (Figure 4). The highest TPHg concentrations were detected in the samples collected from the southern side of tank 3. Hydrocarbon-impacted soil was removed from the tank pit area by overexcavating the pit to a depth of approximately 12 feet below ground surface (bgs). Four additional soil samples collected from the tank pit floor indicated maximum TPHg concentrations of 507 mg/kg at 12.5 feet bgs. Because of proximity to shallow groundwater, additional soil was not excavated. Total oil and grease (TOG) was reported in a soil sample collected from beneath the waste oil UST at a concentration of 1,200 mg/kg. The excavation was

SILVA PARTNERSHIP (FORMER) (Continued)

S101595335

deepened to approximately 13 feet bgs; approximately 40 cubic yards of soil were removed from the waste oil UST excavation and transported offsite. A soil sample collected following expansion of the waste oil tank UST indicated extractable hydrocarbons as diesel and motor oil at concentrations of 55 and 250 mg/kg, respectively. TOG was reported at a concentration of 250 mg/kg. In March 1987, HLA installed groundwater monitoring well MW-1 southwest of the tank excavation (HLA 1987) (Table 1). Soil samples were collected from several depth intervals; TPHg was reported in the soil sample collected from 11.5 feet bgs at a concentration of 72 mg/kg (Table 2). A second monitoring well (MW-2) was installed in the vicinity of the waste oil UST in August 1987 (as referenced in HLA 1992). TOG was reported in the soil samples collected from MW-2 at 7 feet bgs at a concentration of 1,500 mg/kg. In December 1991, HLA performed cone penetrometer testing (CPT) at the site to evaluate the shallow soil at the site and to identify preferential migration pathways along the downgradient boundary of the site (HLA 1992). CPT probes were drilled at nine locations along Washington and Edith Streets to depths ranging from 24.5 to 29.5 feet bgs. The approximate locations of the borings, identified as S-1 through S-9, are identified on Figure 3. In addition, HLA conducted a groundwater survey to evaluate the lateral extent of petroleum hydrocarbons in groundwater. Groundwater samples were collected at approximately nine feet bgs at the locations of the CPT borings. TPHg and benzene were reported in the water samples collected from S-1 through S-3, with maximum concentrations of 10,000 and 470 micrograms per liter ("g/L), respectively. In March 1992, HLA installed groundwater monitoring wells MW-3 through MW-6 at the site (HLA 1992). Well MW-3 was installed immediately north of the former gasoline USTs, and wells MW-4 through MW-6 were installed along the southeast property line. TPHg and benzene were reported at concentrations of 96 and 0.17 mg/kg, respectively, in the soil sample collected from MW-5 at 8.5 feet bgs. TPHg and BTEX were not reported above laboratory detection limits in any other soil samples collected. In December 1992, HLA installed groundwater monitoring wells MW-7 through MW-10 at the site. Wells MW-7 through MW-8, and MW-10 were installed onsite; MW-9 was installed offsite, across East Washington Street. TPHg was detected in the sample collected from MW-7 at 5 feet bgs at a concentration of 130 mg/kg, and was not reported above laboratory detection limits in any other soil samples collected. In March 1994, Geraghty & Miller, Inc. (Geraghty) advanced two soil borings in the parking lot on the northern portion of the site (Geraghty 1994). Borings SB-A and SB-B were advanced to depths of 20 and 18 feet bgs, respectively, at the approximate locations indicated on Figure 3. Soil samples were collected from both borings at depths of 5.5 and 7 feet bgs. TPHg and BTEX were reported in all samples collected at maximum concentrations of 140 and 0.66 mg/kg, respectively. TPHd was also detected in both samples collected from SB-B at a maximum concentration of 5.5 mg/kg. TPHg and benzene were reported in the groundwater sample collected from SP-B at concentrations of 19,000 and 110 "g/L, respectively. On June 28 and June 29, 2004, URS Corporation (URS) installed groundwater monitoring wells MW-11 through MW-14 offsite (URS 2004). These locations were chosen to assess the downgradient extent of gasoline hydrocarbons from the site. Soil samples were collected from approximately 10 feet bgs from all four borings; grab groundwater samples were also collected from the borings. Gasoline Range Organics (GRO) was reported in the soil

SILVA PARTNERSHIP (FORMER) (Continued)

S101595335

sample collected from MW-11 at a concentration of 310 mg/kg (Figure 5). In addition, GRO was reported in the groundwater sample collected from MW-11 at a concentration of 17,000 "g/L. In January 2006, URS drilled nine Geoprobe soil borings (G-2 through G-10) to further assess the soil and groundwater contamination and transport mechanisms in proximity to MW-11 (URS 2006). The highest detected concentrations of GRO and BTEX were found in borings GP-4 and GP-8 at a depth of 10 feet bgs. GRO and benzene were detected in soil at maximum concentrations of 640 and 0.93 mg/kg, respectively, in boring GP-8 (Figure 5). GRO and benzene were detected in groundwater at maximum concentrations of 7,000 and 73 "g/L, respectively, at a depth of 18 feet bgs (Figure 6). In August 2007, Science Applications International Corporation (SAIC) installed monitoring well MW-15 and drilled four Geoprobe borings (GP-11 through GP-14) in the vicinity of MW-11, to the west of the site (SECOR 2007). Soil and groundwater samples collected from GP-11 and GP-12 contained reportable levels of GRO and BTEX. GRO and benzene were detected at maximum concentrations of 370 mg/kg and 0.48 mg/kg, respectively, in the sample collected from 10 feet bgs in boring GP-12. GRO and BTEX were also detected in the samples collected at 10 feet bgs in borings GP-11 and MW-15. The analytical results indicated that concentrations decreased with depth, attenuating to nondetectable concentrations at 20 feet bgs. No analytes were detected above laboratory reporting limits in borings GP-13 and GP-14. Additionally, MtBE and fuel oxygenates were not detected in any of the samples analyzed. Other Additional Notes: Futher investigation and soil vapor sampling has been required in Dec. 2009

 Past Use: Multistory -
 Property Description:

The Site was developed in the 1950s as an auto-wrecking facility. Since then, it has been occupied by numerous auto-wrecking and dismantling businesses. Site use changed in the mid-2000s when a roofing company purchased the property. Local records indicate that numerous hazardous materials storage violations and citations were issued to previous occupants of the site. Containerized waste materials, unused equipment, junk, and debris covered much of the Site area during the Site reconnaissance.

Status: Completed - Case Closed
Status Date: 02/22/2010
Case Worker: UUU
RB Case Number: 49-0121
Local Agency: SONOMA COUNTY LOP
File Location: Regional Board
Local Case Number: 00002697
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Site is located in a light commercial/industrial area of Petaluma, Sonoma County. The Petaluma River is located less than 200 feet north of the site. A 1,000-gallon diesel fuel tank was replaced by a 12,000-gallon diesel tank in 1972. The 1,000-gallon tank was considered in excellent condition at the time of removal. The 12,000-gallon tank was used for diesel fuel storage until 1977, when property ownership changed to Bar Ale, Inc. The property owner indicated that the fill spout had been repeatedly over filled, with surface spillage occurring. In addition, the property owner indicated that the trucking firm applied oil to the ground to provide dust control on the property, approximately 6-8 inches below the current grade. The new property owner had additional fill brought in to raise property level. The 12,000-gallon tank was used for gasoline storage starting in 1988 and ceased in December 1989. On December 19, 1989, the 12,000-gallon tank was removed noting that the union between the pump and the tank (west end) had leaked petroleum products. Approximately, 50-70 cubic yards of soil from the excavated tank backfill was removed along with the tank. The tank, itself, was

S101595323

deemed in excellent condition with no evidence of damage or deterioration. Sidewall soil samples contained up to 300 mg/kg of TPH-g & 1,100 mg/kg of TPH-d. Adjacent site to the E/NE (<200 feet) had three monitoring wells (MWs) that did not indicate any soil or groundwater pollution. A water well survey in 1990 did not find any water wells within 500 feet of the former UST. Two MWs were installed at the site on 9/4/90. About 400 cubic yards of soil and 7,000 gallons of groundwater were removed from the former UST location in December 1990. Excavated soil was taken to a landfill and extracted groundwater was treated and discharged to the sanitary sewers. Excavation extended down to about 12.5 feet bgs. Soil samples during excavation contained up to 2,300 mg/kg of TPH-d with low or non-detectable concentrations of TPH-g & BTEX. Final confirmation soil samples indicated residual soil pollution remaining at the site in 1990 was up to 1,000 mg/kg of TPH-d with low concentrations of TPH-g and BTEX. MW-3 was installed at the site on 3/24/00. Soil samples from the MW-3 contained up to 810 mg/kg of TPH-d and 240 mg/kg of TPH-mo. Groundwater pollutant concentrations in the MWs have decreased to a very low level (maximum of 82 ppb of TPH-d and non-detectable concentrations of TPH-g and BTEX) in 2008 (see attached Table). Based on the following, case closure for this site is considered to be appropriate: (1) The site has been adequately investigated; (2) The primary source (the UST that formerly occupied this site) was removed in 1989; (3) The secondary source, the surrounding impacted soil (about 450 cubic yards) were removed in 1989 and 1990 to the extend practicable along with about 7,000 gallons of impacted groundwater; (4) The impacted groundwater has been monitored for since 1990 and the plume is stable and the pollutant concentrations has decreased to levels below concern; and (5) The current residual concentrations in the soil and groundwater apparently do not represent a current or future public health, ecological, and water resources threat.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MAP FINDINGS

ROSE PROPERTY (Continued)

U001600365

Site History:

The Rose Property (Site) at 101 Petaluma Blvd. South in the City of Petaluma is an approximately 120,000 square foot parcel. The property is currently occupied by retail shops and restaurants as part of the Theater Square development. The Theater Square Property is about 1.4 acres in size and incorporated the addresses 101 (the Rose Property), 115, 119 and 120 Petaluma Boulevard South and 205 and 209 C Street. The Site has been used in the past for vehicle maintenance, repair, and fueling. A gasoline station was located at the Site in the past. Soils and groundwater at the Site have been impacted by total petroleum hydrocarbons (TPH) as gasoline (TPHg) and diesel (TPHd), volatile organic compounds (VOCs), principally benzene, and lead. Soil vapor at the Site was also impacted, primarily by TPHg and benzene. The Site has been the subject of extensive soil, groundwater, and soil vapor investigations. The underground storage tanks (USTs) and accessible contaminated soil have been excavated and removed. Basin Street Properties (Petaluma Theatre Square, LLC) redeveloped the Site with commercial premises on the first (ground) floor, and residential apartments on the second and third floors. This mixed use real-estate development comprises three buildings, with a total footprint of approximately 41,800 square feet. A Screening Level Risk Assessment and Remedial Action Plan (SLRA/RAP) was prepared in April 2005. The screening level risk assessment compared the concentrations detected to the Regional Water Boards relevant ESLs for direct contact exposure and inhalation of indoor air. The significant findings and conclusions of the screening level risk assessment are as follows: TPHg and benzene are present in soil at the Site at levels that exceed the residential direct contact ESLs. Concentrations of benzene are present in soil at the Site at levels exceeding the commercial direct contact ESL. Benzene in groundwater are lower than the ESLs for impacts to residential and commercial indoor air. There is no ESL for impacts to indoor air from TPH-g in groundwater. TPH-g and benzene are present in soil vapor across the Site at levels that exceed ESLs for potential soil vapor intrusion impacts to residential and commercial indoor air. The following actions were taken to ensure that contact with and exposure to the residual pollution in soil, groundwater, and soil vapor at the Theatre Square Site are controlled in a manner that will protect human health and the environment. These actions are spelled out in the deed restriction recorded for the Theatre Square Site: The surface of the Site is entirely covered with buildings and associated hardscape. Only in the tree wells, which are covered with heavy metal grates, is soil exposed at the surface. The top layer of soil in the tree wells consists of imported horticultural fill. The entire ground floor of the Theatre Square development is reserved for commercial use. Residential units are located on the second and third floors and constructed with separate HVAC (Heating Ventilation Air Conditioning) systems. A Liquid Boot membrane was installed beneath the slabs of all the buildings constructed at the Site to act as a barrier preventing soil vapors from entering the building. A GeoVent system to remove soil vapors that may accumulate below the Liquid Boot was also installed beneath the slabs of all the buildings constructed at the Site and activated in 2005. A deed restriction and a Risk Management Plan (RMP) were recorded and implemented at the Site. The purpose of the RMP is to identify activities where residual contaminants may be encountered, provide a notification procedure for those activities, develop procedures to ensure the integrity of the remedial controls, and to develop health and safety procedures to

MAP FINDINGS

ROSE PROPERTY (Continued)

U001600365

ensure safe and proper handling of the impacted soil and groundwater. The deed restriction for the Theatre Square Site specifically requires that: a. Development on the ground floor shall be restricted to industrial, commercial or office space; b. No residence for human habitation shall be permitted on the ground floor; c. No hospitals shall be permitted on the ground floor; d. No schools for persons under 21 years of age shall be permitted on the ground floor; e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the ground floor; f. No Owners or Occupants of the Property or any portion thereof shall conduct any excavation work on the Property, without prior notification to the Board as outlined in the RMP. As outlined in the RMP, some excavation projects will require prior written permission from the Board; g. All uses and development of the Property shall be consistent with any applicable Risk Management Plan, including future amendments. All uses and development shall preserve the integrity of any cap and any remedial measures taken or remedial equipment installed on the Property pursuant to the requirements of the Board, unless otherwise expressly permitted in writing by the Board. h. No Owners or Occupants of the Property or any portion thereof shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, unless expressly permitted in writing by the Board. i. The Owner shall notify the Board of each of the following: (1) The type, cause, location and date of any disturbance to any cap, any remedial measures taken or remedial equipment installed on the Property pursuant to the requirements of the Board, which could affect the ability of such cap or remedial measures, remedial equipment, or monitoring system to perform their respective functions and (2) the type and date of repair of such disturbance. Notification to the Board shall be made by registered mail within ten (10) working days of both the discovery of such disturbance and the completion of repairs; j. No Owner or Occupant of the Burdened Property shall act in any manner that will aggravate or contribute to the existing environmental conditions of the Burdened Property. All use and development of the Burdened Property shall preserve the integrity of any capped areas. The SLRA/RAP was approved by the Regional Water Board on June 21, 2005. The deed restriction for the entire Theatre Square Property was recorded on May 14, 2007. Based on the site specific information and data available in GeoTracker and the Regional Water Boards case file, we conclude that, while this case does not meet all the criteria of the State Water Boards Low-Threat Underground Storage Tank Case Closure Policy (Policy) , a No Further Action determination is still appropriate because the Policy allows for case closure when a case doesnt meet all the criteria but the regulatory agency has determined by other criteria that the case is a low-threat site. Based upon this Water Boards January 5, 1996, Interim Guidance on Required Cleanup at Low-Risk Fuel Sites , Regional Water Board staff has determined that this Site meets the criteria of a Low Risk Groundwater Case as shown below: 1. The leak has been stopped and ongoing sources, including petroleum free product, have been removed or remediated when the USTs and accessible contaminated soil were been excavated and removed. 2. The Site has been adequately characterized. 3. The dissolved hydrocarbon plume in 2003 had only migrated a short distance more than 30 years after the USTs were taken out of service (mid-1980s or earlier). Therefore, the dissolved hydrocarbon plume is not migrating; it is defined, and stable or decreasing. 4. No water wells, deeper drinking water

U001600365

aquifers, surface water, or other sensitive receptors are likely to be impacted. 5. The Site presents no significant risk to human health because the surface of the Site is entirely covered with buildings and associated hardscape except the tree wells, which are covered with heavy metal grates, the entire ground floor of the Theatre Square development is reserved for commercial use. Residential units are located on the second and third floors and constructed with separate heating, ventilating and air conditioning systems. A Liquid Boot membrane was installed beneath the slabs of the building constructed at the Site to act as a barrier preventing soil vapors from entering the buildings. A GeoVent system to remove soil vapors that may accumulate below the Liquid Boot was also installed and activated in 2005. A deed restriction has been recorded that also incorporates a site-specific RMP. 6. The Site presents no significant risk to the environment.

File Location: Local Agency Warehouse
Local Case Number: 00001204
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Excerpts of site histoThe The site is the former location of an automobile dealership that used underground storage tanks (USTs) for gasoline and waste oil. Two gasoline and two waste oil tanks were removed in 1995. Several soil and groundwater investigations were performed. In 2002, approximately 2,200 tons of contaminated soil was excavated from interior and exterior excavations. Two additional USTs were discovered during the 7/19/2002 excavation. Site closed 2/13/2014.

File Location: Local Agency
Local Case Number: 00015920
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpts from "REPORT: Additional Investigation of Groundwater Contamination by Cone Penetrometer Technology" (Environmental Geology Services, February 18, 2010) Through consultation with Mr. Dan Libarle and our site research we understand that the property was last operated as a gas station in the mid 1960's to early 1970's. The letter dated March 31, 1993 from Mr. Jack Lee, EBA Wastechologies, to the SCEHD, stated that there were three underground storage tanks (USTs) located beneath the site (two 6,000 gal USTs, one 289 gal waste oil UST). Mr. Lee stated that the tanks were probably filled with a sand-cement slurry in 1974-75. On May 11, 2001, a 289-gallon UST was removed from the property by Johns Excavating. Mr. Michael Ginn, Petaluma Fire Marshal, and Mr. Jack Lee, of Harris & Lee Environmental Sciences, observed the removal process. Johns Excavating removed the UST and the associated piping to the extent feasible. Visual observations of the UST during removal indicated its condition was good. The tank contained some used oil and was more than three-quarters full of slurry sand-cement mixture from the previous in-place closure. The oil and slurry sand-cement mixture was

vacuum pumped into a vacuum truck while the UST was in place. The interior of the UST was pressure washed, and the waste wash water was pumped into the vacuum truck. The UST was removed from the excavation and transported by Johns Excavating to West Coast Scrap Metal in Windsor, California. The excavation hole was cleaned out to a dimension of 8 ft wide by 8 ft long by 8 ft deep. Five soil samples were collected by Harris & Lee Environmental Sciences (H & L), one from each side wall of the excavation approximately 5 feet below ground surface, and one at the bottom of the excavation at 8 feet below ground surface. A composite soil sample was also collected from the soil stockpile. Analysis of the soil samples included TPH-G, TPH-D, TPH-MO, BTEX, MTBE, and VOCs using EPA test methods 8015/8020/8010/8260. Results of the soil sampling indicated the presence of residual petroleum hydrocarbon products. The results are included in Harris & Lee Environmental Sciences report dated June 27, 2001. On June 13, 2001, Johns Excavating returned to the site under the direction of H & L, and removed an additional 3 foot panel along the east side wall to an approximate depth of 8 feet in an attempt to remove remaining soil contaminants detected during the sidewall soil sampling during the UST removal as referenced above. Soil samples were collected at depths of 5 and 8 feet along the east sidewall (Samples #1 and #2), and also from the south sidewall at 5 feet (Sample #3). EPA Test Methods 8015/8015M/8020 were used to analyze for TPH-G, TPH-D, TPH-MO, BTEX, and MTBE. Analysis resulted in only one detection of these compounds in Sample #1 of 50 ppm of TPH-MO. In the letter dated April 9, 2002, the SCEHD required an investigation to identify the extent of residual contamination in soil from the former UST. In our consultation with the owner and Jack Lee, we also learned that the SCEHD required characterization of shallow groundwater beneath the site. The April 9, 2002 letter identified the responsible party as Mr. Dan Libarle, Petaluma Properties, and directed him to submit a Work Plan which describes the investigation protocols, and also to require that an Underground Storage Tank Unauthorized Release (Leak) / Contamination Site Report Form be filed with the SCEHD. The form dated May 2, 2002 was submitted to the SCEHD. Environmental Geology Services (EGS) was retained by Mr. Dan Libarle to prepare the Work Plan and Health & Safety Plan dated May 13, 2002. The Work Plan was approved by the SCEHD in their letter dated July 15, 2002. EGS implemented the May 13, 2002 Work Plan by drilling three (3) soil borings in the vicinity of the former 289 gallon UST to a depth of 15 feet and collecting soil and groundwater samples from the borings (B-1 through B-3). The results of the Preliminary Site Assessment are included in our report dated May 12, 2003, and are attached to this report as Tables 9 and 10. Based on the results of soil and groundwater samples, we recommended an additional site investigation which included installation of monitoring wells and additional soil borings to further characterize the residual contamination. The SCEHD concurred with our recommendations in their May 20, 2003 letter. EGS prepared the August 25, 2003 Work Plan and subsequent Addendums 1, 2 and 3, and the SCEHD approved the Work Plan and Addendums in their letter dated July 14, 2004. EGS December 21, 2004 report presented the work conducted to begin implementation of our Work Plan and included the results of the soil gas survey, soil borings, soil and groundwater sampling, and monitoring well installation borings, soil sampling and well construction details. The results of that investigation are included in the attached Tables 7 through 8 (B-4 through B-9), and 11 through

12 (MW-1 through MW-4). EGS completed the Sensitive Receptor Survey dated April 26, 2005. EGS has conducted ongoing quarterly monitoring since February 2005 with results indicating significant residual petroleum hydrocarbon impact to groundwater, therefore requiring additional investigation to further define the lateral and vertical extent of the residual contamination plume. EGS prepared the Work Plan dated July 26, 2005, which was approved by the SCEHD in their letter dated September 20, 2005, and Addendum to Work Plan dated April 25, 2006 which revised soil borings locations. On April 27-28, 2006 and May 4-5, 2006 EGS implemented the Work Plan and drilled eleven (11) additional soil borings and collected soil and groundwater samples. The results of that investigation are documented in EGS May 31, 2006 report and are presented in attached Tables 5 through 6. EGS recommended that a Feasibility Study and Remedial Action Plan (FS/RAP) be prepared based on the high concentrations of residual contamination at this site. The SCEHD submitted their August 3, 2006 letter responding to our May 31, 2006 report. That letter required additional exploration to further evaluate the contamination plume and deeper migration of residual contamination rather than FS/RAP as recommended by EGS. Therefore, EGS prepared the June 18, 2007 Work Plan that responded to the SCEHDs additional requirements. The June 18, 2007 Work Plan included the use of CPT to further evaluate the residual contamination. The SCEHD approved the Work Plan in their letter dated October 23, 2007. The field work from the additional investigation by CPT is documented in our report dated March 14, 2008, and the results are presented in Tables 3 and 4 attached to this report. Upon review of our March 14, 2008 report, in which EGS again recommended the preparation of a FS/RAP. However, the SCEHD required additional investigation of the deeper groundwater. Therefore, EGS prepared the Work Plan dated September 8, 2008 to advance additional CPT probes to further investigate the deeper groundwater. The SCEHD reviewed the Work Plan and issued their comments dated November 25, 2008. EGS completed the Revised Work Plan dated January 27, 2009 that addresses the SCEHD comments. SCEHD approved the Revised Work Plan in their letter dated March 26, 2009. Additional History by Sonoma County staff: Further investigation was completed in Oct. 2009. Upon review of the report on the investigation, additional investigation was required with a work plan due on Aug. 2, 2010.

Local Agency: Not reported
File Location: Local Agency Warehouse
Local Case Number: 00027618
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: The site is located in downtown Petaluma, CA in a commercial business district. The building that occupies almost the entire space of the lot was used as a bank and is currently an antique shop. A 1000 gallon fuel oil tank was located in the basemenet of the building, approximately 12 feet below ground surface (bgs). The fuel oil was used to heat the building. In June 2007 the tanks was abandoned in-place by removing the contents, washing the interior of the tank, and filling it a cement slurry. Holes were drilled through a concrete slab over the west and east ends of the tank; soil and; groundwater samples were collected and analyzed for petroleum hydrocarbons. Analytivcal results detected petroleum hydrocarbon contamination in soil and groundwater samples collected. One groundwater monitoring well was installed in November 2008. The purpose of the well was to provide a sentinel well between the former tank and the Petaluma River to monitor whether groundwater impacted by diesel/heating oil was migrating toward the river. The well has not been impacted with constituents of concern. A No Further Action Request Report was submitted in August 2009. The request was reviewed by Sonoma County Department of Health Services, Environmental Health Division and the North Coast Regional Water Quality Control Board; the request for closure was approved. Closure letter issued 11/19/09.

 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: 00001917
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Gasoline
 Site History: excerpted from "Baseline Site Assessment" Conestoga-Rovers & Associates, August 6, 2008 "It is unknown when Chevron began service station operations, but the site has been a gas station since at least 1923." "Chevron operated a service station starting in 1946. Only limited information is available regarding the number, volumes, and configuration of successive generations of underground storage tanks (USTs). In 1988, seven 750-gallon USTs were removed from the northwestern corner of the site. In December 2009, the station facilities were removed. Facilities removed included three 10,000-gallon double-walled fiberglass gasoline USTs installed in 1992, and double-walled fiberglass product piping installed in 1995." (Site Assessment Report, May 6, 2010, Conestoga-Rovers & Assoc.) A remedial Action Plan was concurred with on 7/12/12 for corrective action. That work was not performed. The site was petitioned. Awaiting a deed covenant for soil vapor to proceed with site closure. 21 Monitoring wells have been installed. 6 monitoring wells have been destroyed. 15 wells remain. Remediation History: Groundwater extraction occurred from 1/94 through 7/28/95. Approximately 387,082 gallons of groundwater was removed and disposed of under permit to the City of Petaluma sewer. Excavation of the dispenser area and

S113176749

product piping lines occurred in 1995. Approximately 1200 cubic yards of soil was removed. ORC socks were installed in 1997 in monitoring wells MW-1, MW-2, MW-8 and MW-12. The ORC socks were removed in 2002. A passive skimmer was installed in monitoring well MW-2 in 1996 and was removed in 2002. Approximately 1.2 gallons of SPH was removed. City of Petaluma street improvements in 2005 included trenching adjacent to the site. Approximately 438 cubic yards were removed. Site Management Requirements: An Environmental Covenant has been filed on the deed of the site to properly maintain soil vapor mitigation technology installed as part of redevelopment. A Risk Management Plan (RMP) is also included in the Covenant. The City of Petaluma Building and Planning Departments have been notified. Any Building Department plans submitted must include provisions for soil vapor mitigation per the Environmental Covenant. The Covenant and RMP also restrict groundwater extraction for any use unless expressly permitted in writing by the overseeing agency. Sonoma County Permit and Resource Management Department has been notified. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 5. The consultant has presented the argument that the site conditions near-term future scenarios pose a low threat to human health or the environment and Water Quality Objectives will be achieved in a reasonable time frame. The plume is stable and decreasing. Vapor Intrusion to Indoor Air Criteria is met by criteria 2c. An Environmental Covenant and Risk Management Plan has been filed on the deed of the site property that includes the installation of soil vapor mitigation technology. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3a. The above findings were reviewed and concurred with by the LOP Licensed Professional. Environmental Covenant and Residual Risk Management Plan. SITE CLOSED on 2/21/20

carwash with 6 wash bays, a small storage shed, a covered vacuum area with 2 covered & 1 uncovered vacuum station. The Site is used for retail, a deli, a carwash & a storage facility. In 1886 a wagon shop (WS) was located near the southern end of the current bldg at 368 PBN. Stockyards were present along with a shed, hayloft & a meat packing bldg (MPB). By 1888 hog pens & a slaughter house (SH) were located near the current barn behind 368 PBN. The WS was vacant & the hayloft was a carriage shop. In 1894, the SH was gone & the stockyards were listed as J. Merrit's CattleYard. By 1906, the MPB was a flour/feed store & a furniture store. The 402 PBN bldg had been altered to current state & used as feed storage. The carriage shop was listed as a hay warehouse. The Site was no longer described as a cattle yard or stockyard. In 1910 the 368 PBN bldg was in current state for hay/ feed storage. An above ground oil tank was present on 402 PBN. In 1923 the oil tank was removed. The current barley & grain cleaner had been built. The small bldg at 360 PBN was built. The former MPB was a mattress fabricator, poultry & cigar shop. In 1949 the barn in the eastern portion was built & listed as a hay warehouse. The former MPB was a bicycle/motorcycle shop. The 402 PBN bldg was a wool warehouse. The N half of the bldg at 368 PBN was a skating rink. In 1959 the MPB had been removed. The bldg located at 414 PBN was built & listed as a bicycle repair shop. The skating rink was converted to misc. storage. The barley & grain cleaner was no longer in operation. By 1965 1 washbay for the carwash was present. The barn was vacant & the barley & grain cleaner was listed as wool storage. The bldg at 368 PBN was a furniture store.

current state & used as feed storage. The carriage shop was listed as a hay warehouse. The Site was no longer described as a cattle yard or stockyard. In 1910 the 368 PBN bldg was in current state for hay/ feed storage. An above ground oil tank was present on 402 PBN. In 1923 the oil tank was removed. The current barley & grain cleaner had been built. The small bldg at 360 PBN was built. The former MPB was a mattress fabricator, poultry & cigar shop. In 1949 the barn in the eastern portion was built & listed as a hay warehouse. The former MPB was a bicycle/motorcycle shop. The 402 PBN bldg was a wool warehouse. The N half of the bldg at 368 PBN was a skating rink. In 1959 the MPB had been removed. The bldg located at 414 PBN was built & listed as a bicycle repair shop. The skating rink was converted to misc. storage. The barley & grain cleaner was no longer in operation. By 1965 1 washbay for the carwash was present. The barn was vacant & the barley & grain cleaner was listed as wool storage. The bldg at 368 PBN was a furniture store.

RB Case Number: 49-0076
Local Agency: SONOMA COUNTY LOP
File Location: Local Agency Warehouse
Local Case Number: 00001214
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline, Diesel
Site History: excerpted from "Report on Hunt and Behrens, Inc. Property" by Baseline Environmental Consulting, December 15, 1987: Initially, three underground fuel tanks were removed from two areas of the site. Two 2,000-gallon gasoline tanks (one with leaded and the other with unleaded) were present in the northeast portion of the site near Lakeville Street. The third tank was a 2,000-gallon diesel tank located next to a warehouse and mill structure southwest of railroad tracks that bisect the property. All three tanks were installed in the 1970s. About 100 cubic yards of contaminated soil was removed from the gasoline tank pit and approximately 50 cubic yards of soil was excavated at the diesel tank pit. Investigations and monitoring wells at the respective former tank locations indicated that impact to soil and groundwater was minimal. The site was being considered for closure in 1998 when another underground tank was discovered in the southeast portion of the site. excerpted from "Underground Tank Removal Report and Work Plan", by Baseline Environmental Consulting, July 1998: On June 3, 1998, an approximately 1,750-gallon underground tank was removed from an area between an existing building and the

1000593857

Petaluma River. The tank was discovered during construction activities for channel improvements to the river. Tank use and history is unknown and possibly pre-dates the mid-1950s. The tank was filled with sand when first discovered and was significantly rusted on the top. Approximately 10 cubic yards of soil were removed from the tank pit at the time of the removal.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline, Diesel
Site History: The following information has been excerpted from reports on file with the Sonoma County Environmental Health Division: Numerous investigations have been performed at this location dating back to 1994 when the Army Corps of Engineers first started sampling the banks of the Petaluma River for a feasibility study for the flood control project. It was this time the first indications of petroleum hydrocarbon contamination were detected at this site. In 1995 a second study, by Geopacific, for California Gold Dairy Products Inc. was completed and outlined the areas of contamination. A third study by Harding Lawson Associates was conducted in 1996 based on the findings of the previous report. The Harding Lawson Associates study was limited to a review of records and used Ground Penetrating Radar (GPR) to locate underground tanks. The report dated April 18, 1996 reported that the radar in fact picked up an object or objects in the ground around the areas of the initial soil borings that were reported with high levels of hydrocarbons. A fourth report, dated August 15, 1996, was prepared by Harding Lawson Associates and approved by the SFB-RWQCB for the removal of a UST at the 51 Lakeville location. In 1996 a UST was removed from the site by Johns Excavating, and a closure letter was issued by the SFB-RWQCB on September 11, 1996 stating that no further action was required. In December of 2001 a contractor under the direction of the US Army Corp of Engineers (USCoE) was installing a storm drain in the same location of all the previous studies and encountered contamination during the excavation. Although we have attempted to obtain information, we do not have documentation as to the amount of material that was encountered, removed, or if any final excavation

sampling was preformed. This project was handled by The Army Corp of Engineers and the City of Petaluma. The final phase of the installation was to have the storm drain system next to the relocated railroad tracks connected to the existing storm drain that was installed in 2001. This was when the contractor encountered two previously unknown USTs. The construction work was halted and the two tanks were removed along with contaminated soil under the direction of the Petaluma Fire Department. The site meets the Low Threat Closure Policy. At the time of the monitoring well destruction, another UST was discovered. It was removed in July 2014. No further action on the additional tank was determined and a letter was sent on 9/24/14. Site closed on 10/15/14.

Latitude: 38.239102464
Longitude: -122.64329879
Status: Completed - Case Closed
Status Date: 09/28/2018
Case Worker: LCW
RB Case Number: 49-0311
Local Agency: SONOMA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 00001043
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpts of site history from file reports: Two underground storage tanks (USTs) were removed from the site in 1999. In 2001, two additional USTs were removed. In 2003, interim remedial action occurred at the site to mitigate the migration of fuel hydrocarbons in groundwater. Ozone sparging has been performed at the site since February 2007. Post remedial monitoring started after the system was turned off on 10/6/15. Soil vapor sampling, with selected resampling due to high reporting limits for benzene, have been completed. As groundwater is high, only 1 soil vapor sample was taken at 5'. All other samples were either at 3' or a vapor pin inside the offsite building. Site meets 2b for soil vapor. 15 monitoring wells, 3 extraction wells, 21 ozone sparge wells and 9 vapor wells/pins have been installed. 1 extraction well and 2 monitoring wells have been destroyed. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 5a. The consultant states the MTBE plume originating from the site poses a very low threat to offsite domestic well DW1 and that MTBE concentrations will decrease to below water quality objectives in a reasonable time frame. The LOP licensed professional generally concurs with the assessment. Vapor Intrusion to Indoor Air Criteria is met by criteria 2b. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3a. Remediation History: Over excavation occurred at the time of the tank removal on 11/5/01 removing approximately 395 tons (263 cubic yards). High Vacuum Dual Phase Extraction occurred from 6/11/03 through 6/26/03 removing approximately 167 lbs of hydrocarbons and 41,880 gallons of water. A second event occurred from 7/10/03 through 7/28/03 removing 215 lbs of hydrocarbons and 46,910 gallons of water. Ozone sparging occurred both onsite and offsite from 2/7/07 through 10/7/15. The onsite system ran for 21,223 hours (hydrogen peroxide for 4801 hours) injecting 1292 lbs of ozone. The offsite system was replaced with the onsite system in 2012. The offsite system ran for a total of 5049 hours and injected approximately 1812 lbs of ozone. Hydrogen peroxide

injection occurred weekly from 6/4/15 through 9/21/15 in wells MW1, EW1, EW3, MW2 and MW3. The water supply well at 414 Petaluma Blvd has been routinely sampled since 2007 with no constituents of concern detected. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department has been notified. A Soil and Groundwater has been submitted and is on Geotracker. SITE CLOSED ON 9/28/18

Site History: Excerpts of site history from file reports: In 1993, emergency abatement activities that included a groundwater extraction system was installed at the site due to a fuel line release. In 1994 three underground storage tanks (USTs) were removed from the site. Three new USTs were installed in the same excavation. Investigation of the site has occurred from 2001 to present. Site was overexcavated in December 2014. An area 20x26x12 feet deep was excavated and 316 tons of contaminated material was removed. Site excavation was limited by

canopy footings. A monitoring well is required to be installed for post remedial monitoring. The site was entered into the program due to a piping leak that was detected in the sewer system in 1993. 12 monitoring wells and one extraction well have been installed. 3 monitoring wells have been destroyed. The nearest sensitive receptor is water supply well located 85 feet up-gradient from the release and 5 feet from the property line. The well has been sampled approximately 66 times with only a detection of toluene (.82 ppb) in 2006. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 5a. Vapor Intrusion to Indoor Air Criteria is met by criteria 2a, scenario 3. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3a. Remediation History: Emergency abatement due to line leak into the City sewer in 1993. An interceptor trench was constructed and an extraction well was installed in the trench. Extraction occurred from 1993 to approximately 1996 in which groundwater was extracted, treated and discharged into the City sewer under permit. Approximately 70 cubic yards of soil was removed and properly disposed in the construction of the trench. Approximately 400 cubic yards were over-excavated and disposed of at the time of the 1994 tank removals. Approximately 316 tons of soil was removed in December 2014. The excavation measured 20X26X12 deep and was limited by site structures. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department has been notified. A Soil and Groundwater has been submitted and is on Geotracker. Site wells were destroyed in April 2018. Extraction well EW1 and Interceptor Trench were destroyed in November 2018. Site restoration activities were delayed due to rain. Site restoration occurred in October 2019. SITE CLOSED 11/27/19

Description:	RP states that a bushing was weeping on pole mounted transformer (1968) resulting in the release of less than 2 cups of mineral oil with unknown PCB content onto the ground around the transformer. The release is contained and cleanup has been scheduled. No waterways have been impacted.

Report" (CRA, March 17, 2010) June 1985 Well Installation: During June 1985, Emcon Associates installed groundwater monitoring wells S-1 through S-4 December 1988 Soil Gas Survey: During December 1988, Tracer Research Corporation completed a shallow soil gas survey. March 1989 Site Investigation: During March 1989, Woodward-Clyde Consultants installed seven groundwater monitoring wells (S-5 and S-7 through S-12) and drilled five soil borings (S-A through S-E). September 1989 Site Investigation: During September 1989, Geostrategies Inc. (GSI) installed monitoring wells S-13 through S-17 and drilled recovery well pilot boring SR-1. July 1990 Site Investigation: During July 1990, GSI installed monitoring well S-18 and recovery well SR-1. September 1991 Soil Vapor Extraction Well Installation: During September 1991, GSI installed soil vapor extraction wells SV-1 and SV-2. September 1993 Soil Vapor Extraction Well Installation: During September 1993, GSI installed soil vapor extraction wells SV-3 and SV-4. February 1997 Well Destruction: During February 1997, Cambria Environmental Technology, Inc. (Cambria) destroyed wells S-4, S-5, S-10, S-11, S-14, and S-18. May 1998 Dispenser Upgrades Soil Sampling: During May 1998, Cambria collected a soil sample beneath one dispenser location during dispenser upgrades performed by Able Maintenance. June 2002 Site Investigation: During June 2002, Cambria installed monitoring wells S-19 through S-22. March 2005 Underground Storage Tank system Upgrades Soil Sampling: During March 2005, Cambria collected soil samples from beneath dispenser and product piping locations during UST system upgrades performed by Paradiso Mechanical, Inc. September 2006 Unknown UST Evaluation: During September 2006 and due to elevated petroleum hydrocarbon concentrations in offsite well S-8, Cambria reviewed aerial photographs and Sanborn Fire Insurance Maps to determine if evidence of an unknown UST existed. No unknown USTs were identified. January 2007 Unknown Source and Preferential Pathway Evaluation: During January 2007, Cambria performed a geophysical survey to identify potential preferential pathways for petroleum hydrocarbon migration or other potential petroleum hydrocarbon sources in the vicinity of well S-8 and the southern portion of the site. No USTs were identified during the survey. Several underground utilities were identified during the survey. August 2007 Site Investigation: During August 2007, Conestoga-Rovers & Associates (CRA) drilled soil borings SB-1 through SB-3, S-23, and CPT-1. Boring S-23 was converted to a groundwater monitoring well. Site Remediation: During 1993, Weiss and Associates (WA) completed installation of a soil vapor extraction (SVE) system and a groundwater extraction (GWE) system at the site. The GWE system began operation during December 1993 and the SVE system began operation during January 1994. SVE removed approximately 3,400 lbs of hydrocarbons between January and November 1994. WA shut down the SVE system because it reached asymptotic levels. Between December 1993 and February 1996, the GWE system extracted 575,930 gallons of groundwater equating to the removal of approximately 218 pounds of hydrocarbons. The GWE system was shut down due to low mass removal rates and cost ineffectiveness. During February 1997, Cambria also installed oxygen releasing compounds in wells S-2, S-3, S-8, and S-12. Periodic GWE by vacuum truck was performed at the site from June 2002 to December 2003. Groundwater was primarily extracted from a UST backfill well due to low water production from wells S-2, S-3, S-22, and SR-1. A total of 46,057 gallons of groundwater were extracted during periodic GWE equating to the removal of 4.16 gallons

of methyl tertiary butyl ether (MTBE). During 2005 product dispenser and piping upgrades, 425 tons of material were excavated from the site and disposed of. A five day dual-phase extraction (DPE) test was performed at the site during May 2006. The total vapor-phase mass removed from all wells during the DPE activities was estimated at 75.7 pounds of total petroleum hydrocarbons as gasoline (TPHg), 12.86 pounds of benzene, and 3.64 pounds of MTBE. Approximately 7,500 gallons of groundwater were extracted during DPE equating to 0.14 gallons of TPHg and 0.37 gallons of MTBE removed. Groundwater Monitoring: Groundwater monitoring at the site has been conducted since 1985. The monitoring well network currently consists of wells S-1 through S-3, S-7 through S-9, S-12, S-13, S-15 through S-17, and S-19 through S-23. Groundwater monitoring is currently conducted semi-annually during the first and third quarters. Sulfate injection pilot test occurred on 11/11/13. HVDPE utilizing a mobile unit for 30 days has been concurred with. Many aspects of a fixed system will be used. An evaluation will be performed after the 30 day event.

Environmental Interest/Information System:

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ANDY'S AUTO REPAIR (Continued)

S101304856

Local Case Number: 00002106
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpts of site history from file reports: Two underground storage tanks (USTs) were abandoned in place in 1986. A waste oil tank was removed from the property in 1987. Site investigation has occurred from 2003 to present. 13 monitoring wells and 3 Dual Phase Extraction wells were installed. A Dual Phase Extraction Pilot test was conducted from 10/15/07 through 10/20/07. Approximately 69-78 pounds of hydrocarbons removed in the vapor phase. Approximately .4 pounds of hydrocarbons removed from groundwater. Excavation of the site occurred from 6/18/14 through 6/27/14. Approximately 300 tons were removed. The excavation was executed to the extent possible given site constraints. Groundwater flow directions is primarily northerly. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department has been notified. A Soil and Groundwater Management Plan has been submitted and is on Geotracker. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 1. Vapor Intrusion to Indoor Air Criteria is met by criteria 2a scenario 4. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3a. SITE CLOSED 8/5/16

Latitude: 38.233114978
Longitude: -122.643755452
Status: Completed - Case Closed
Status Date: 08/04/2017
Case Worker: LCW
RB Case Number: 49-0341
Local Agency: SONOMA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 00025985
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Excerpted from "Phase II Environmental Site Assessment" by ECON, 10/24/08: The site was used as a carriage factory from 1852 until at least 1923. The factory included a foundry on the site and a painting area immediately adjacent to the east side of the site. In addition, a service station operated at the site from 1949 until at least 1974. The release at the site is in the process of being characterized. The site was entered into the LOP based on the soil and groundwater results from a Phase II Environmental Site Assessment. The Underground Storage Tanks were removed in February 2011. 6 monitoring wells, 5 vapor wells and 1 vapor pin have been installed at the site. The site meets the Low Threat Closure Policy as follows: All General Media Criteria are met. Groundwater Specific Criteria is met by criteria 5. Vapor Intrusion to Indoor Air Criteria is met by criteria 2a scenario 4. Direct Contact and Outdoor Air Exposure Criteria is met by criteria 3a. (Per the SWRCB CU Fund RSR dated October 2015). Site Management Requirements: Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department has been notified. Residual soil contamination is present. Contingency planning is required for worker safety and waste disposal if excavating in the vicinity of the former tanks. The Building/Planning Department has been notified. A Soil and Groundwater Management Plan has been submitted and is on Geotracker. SITE CLOSED 8/4/2017

in shape and is bordered at the front (south) side by Western Avenue, on the west side by Howard Street, and on the north and east sides by residential and commercial buildings. The Site was developed in 1852 by William Zartman & Company as a carriage factory with a machine shop and foundry for manufacturing and repairing wagons and carriages. On a 1885 Sanborn map, activities at the Site were shown to include iron working and wood working. By 1906 and until at least 1923, the factory contained a machine shop and an adjacent tire furnace in the approximate location of what is now the west side of the restaurant. The factory operated until around 1926. The factory buildings were removed buildings were removed and a gasoline service station with a single building was built by 1949. The Site was a service station until at least 1974. The service station building still exists today; however, the ownership and uses have changed. Between 1950 and 1960, the Site operated as Zimmerman's Union gas station. Between 1960 and 1974, the Site was Harry Parks Richfield Service Station and Harry Park Arco Service Station. Since approximately 1979, the Site has been used as a restaurant, occupied as Pete's Steak Sandwich and the Rib Station. It is currently occupied by Cotija Restaurant.

 Property Description:

The Site is relatively flat, rectangular in shape, and is currently occupied by C & W Auto Wreckers. The Site is developed with one small (approximately 15 x 20) wood frame building in the northwest corner and a detached, smaller restroom building. There are several sheds along the west side of the Site that are currently used for storage. The Site is unpaved except for a covered, concrete-floored work area approximately 35x15 feet in size on the east side of the Site. The Site is bounded on the south by railroad tracks and Hopper Street. The property to the south of the Site across Hopper Street (500 Hopper Street) appears to never have been developed. It is unpaved and has been used for storage of industrial materials. 1949, 1959, and 1965 Sanborn Fire Insurance maps show the Site as undeveloped except for two small buildings at the northwest corner. One of the buildings was used as a garage and the other was used to store tile and brick. During these years, the Site appeared to be part of the Petaluma Fertilizer Company. A small building and what are probably vehicles parked along the length of the Site are visible in a 1953 air photo in the northwest corner of the Site. In 1965, 1993, and 1998 air

photographs, the Site appeared as it did in the 1953 photo except that by 1965, vehicles filled the Site. The 1965 Sanborn map describes the Site as a junk yard . Therefore, the Site may have been used as an auto wrecking yard as early as 1965. It was purchased by Mr. Worden in 1966 or 1967. It has used since that time as an auto wrecking yard.

By September 1978 the 11,000 gallons of released product had reportedly been recovered. 1989 - 1990 Two 10,000-gallon underground storage tanks (USTs) and one 550-gallon waste oil UST replaced. One 250-gallon UST of unknown use was removed and not replaced. May 1990 Soil gas survey was performed. Concentrations from 6.5 feet below ground surface (bgs) were highest in the southern corner of the Site while concentrations from 9.5 feet bgs were highest in the northern corner of the Site. January 1991 through October 1992 Fifteen (15) groundwater monitoring wells (MW-1 through MW-15) and one six-inch groundwater recovery well (RW-1) were installed. The recovery well was destroyed due to faulty construction and was subsequently replaced. November 1992 Kaprealian Engineering (KEI) performed an aquifer test on well RW-1. February 1996 Oxygen Releasing Compound (ORC) was used in four monitoring wells (MW-1, MW-3, MW-4, and MW-9). July 2002 Subsurface Utility and Drinking Water Survey conducted by Gettler-Ryan Inc. (Gettler-Ryan). July 2005 SCDHS requested additional assessment at the site prior to implementation of Remedial Action Plan. February 2006 Delta directed the advancement and installation of groundwater monitoring wells MW-16 and MW-17. Delta directed the advancement of borings CPT-1 and CPT-2 to 53 and 21 feet bgs, respectively. Borings GP-1 through GP-6, GP-9, GP-10, GP-12, and GP-13 were advanced to depths ranging from 16 to 18 feet below ground surface (bgs). The highest total purgeable petroleum hydrocarbons (TPPH) and benzene concentrations were reported in boring CPT-1 (7,300 mg/kg TPPH at 10 feet bgs and 430 mg/kg benzene at 14 feet bgs). Methyl-tertiary butyl ether (MTBE) was below the laboratory's indicated reporting limit in all borings with the exception of GP-10 with a maximum concentration of 0.10 mg/kg. October 2007 Delta directed the advancement of soil borings GP-7, GP- 8 and GP-11. In soil, concentrations of petroleum hydrocarbon constituents were below the laboratory's indicated reporting limits in all samples collected, with the exception of GP-8 (at a depth of 5 feet bgs) and GP-11 (at depths of 12.5 to 13 feet and 19.5 to 20 feet bgs) with total oil and grease (TOG) concentrations of 5,100 mg/kg, 140 mg/kg, and 1,900 mg/kg, respectively. In groundwater, TPPH was reported in the sample collected from GP-11 at a concentration of 83 micrograms per liter (pg/L). Total petroleum hydrocarbons as diesel (TPHd) was reported in samples collected from borings GP-7 (52 pg/L) and GP-11 (150 M9/L). MTBE and di-isopropyl ether (DIPE) were reported in a groundwater sample collected from GP-11 at concentrations of 1.3 and 1.2 M9/U respectively. All other petroleum hydrocarbon constituents analyzed</p>

were below the laboratory's indicated reporting limits in each of the samples collected. Additional Notes by Sonoma County LOP A pilot study was completed for the application of magnesium sulfate from Dec. 2009 to March 2010. Additional testing is required however. Access to destroy monitoring well MW-11 located at 212 Wilson, Petaluma (APN007-132-030) was not granted. The responsibility for that monitoring well is now the property owner of 212 Wilson responsibility to maintain and properly destroy the well. SITE CLOSED 5/6/16

RB Case Number: 49-0152
Local Agency: SONOMA COUNTY LOP
File Location: Local Agency
Local Case Number: 00001490
Potential Media Affect: Well used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Excerpts from "Site Conceptual Model" (Conestoga-Rovers & Assocs, June 26, 2009) 1977 Gasoline Spill: On May 9, 1977, approximately 1,200 gallons of gasoline were reportedly released from the underground tank complex at the Shell site. 1985 Soil Borings: In May 1985, Emcon Associates drilled and sampled borings S-1, S-2, and S-3 near the underground fuel and waste oil tanks. Up to 7,600 mg/Kg TPHg were detected in the 10 fbg depth soil sample from boring S-2, which was drilled in the center of the fuel tank complex. No waste oil was detected in soil samples from the boring drilled adjacent to the waste oil tank. 1985 Tank Replacement: In October 1985, the

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

SHELL SERVICE STATION (Continued)

S100236134

underground fuel tanks were removed and replaced. Although no native soil samples were collected from beneath the tanks, up to 200 mg/Kg TPHg were detected in excavated soil stockpiles. 1986 Soil Borings: In January 1986, Kaprealian Engineering, Inc. drilled soil borings B-1 through B-4 to between 13 and 21 ft below ground surface. No floating hydrocarbons or hydrocarbon odors were observed in the borings. No samples were collected for laboratory analysis. 1990 Well Installations: In January and July 1990, Geostrategies, Inc. (GSI) drilled borings S-A through S-F and installed onsite ground water monitoring wells S-4, S-5, and S-6. 1991 Well Installations: In June 1991, GSI installed onsite well S-7 and downgradient wells S-8 through S-13 to further define the extent of hydrocarbons in soil and ground water beneath and downgradient of the site. In the fourth quarter of 1991, GSI installed soil vapor extraction (SVE) and groundwater extraction (GWE) well SR-1 and SVE well SV-1 and ground water monitoring wells S-15, S-16 and S-17. 1993 Remediation System Installation: In July 1993, GSI installed a GWE and SVE system to remediate hydrocarbons detected beneath the Shell site. 1994 Well Installations: In April 1994, Weiss and Associates (WA) Geostrategies, drilled borings BH-A through BH-F, SR-2 through SR-4, SV-2 and S-18. SR-2 through SR-4, SV- 2, and S-18 were converted to groundwater extraction wells, soil vapor extraction wells, and a groundwater monitoring well, respectively. 2004 Dispenser Upgrades: During August 2004 Able Maintenance, Inc. removed the dispensers at the site. Cambria Environmental Technology, Inc. collected four native soil samples (D-1 through D-4) beneath the dispenser islands at a depth of approximately 3 feet below grade. No benzene, ETBE, DIPE, or TAME were detected in the soil samples collected from beneath the dispensers. TPHg was detected in soil samples D-1 and D-4 at concentrations of 35 and 1.2 mg/Kg, respectively. The laboratory report indicated that the TPHg detected in soil sample D-1 does not exhibit a typical gasoline chromatographic pattern. Ethylbenzene, toluene, and xylenes were detected in soil sample D-4 at concentrations of 0.031, 0.0090, and 0.10 mg/Kg, respectively. MTBE was detected in soil samples D-1, D-2, and D-3 at concentrations of 0.18, 0.17, and 0.029 mg/Kg, respectively. TBA was detected in soil samples D-2 and D-4 at concentrations of 0.034 and 0.13 mg/Kg, respectively. 2007 Investigation: During August 2007, Conestoga-Rovers & Associates drilled seven soil borings (SB-1, SB-2, and SB-5 through SB-9) at the site. Low to moderate gasoline constituent concentrations were detected in all soil borings at varying depths and in the groundwater sample collected from boring SB-5. 2008 Investigation: During September 2008, Conestoga-Rovers & Associates drilled four soil borings (SB-10, SB-11, MW-19, and MW-20) at the site. Borings MW-19 and MW-20 were converted to monitoring wells. The downgradient extent of impacted groundwater was defined by wells MW-19 and MW-20. Site Remediation: Site remediation consisted of SVE and GWE systems. The SVE system operated until 1997 and removed 3,882 pounds of hydrocarbons. The SVE system was shutdown due to low influent concentrations. The groundwater extraction system operated into March 2008 and removed 498 pounds TPHg, 37.2 pounds benzene, and 7.54 pounds MTBE. The GWE system was shutdown due to asymptotic mass removal rates and cost ineffectiveness. Additional Notes by LOP Staff 11/18/2009 A vapor study near building was done in areas of high soil contamination. A viable revised corrective action plan is required. MNA has been proposed but is not acceptable.

Status: Completed - Case Closed
Status Date: 07/03/2013
Case Worker: LCW
RB Case Number: 49-0332
Local Agency: SONOMA COUNTY LOP
File Location: Local Agency Warehouse
Local Case Number: 00001795
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline, Diesel
Site History:

An Underground Storage Tank was discovered when excavating for a new building. The UST was removed under permit of Petaluma Fire on 4/19/04. Soil sample results reported TPH-motor oil at 730 mg/kg, TPH-gasoline at 91 mg/kg, and TPH-diesel at 31 mg/kg. Contaminated soil was removed to 10-12 feet in depth. The site was entered into the Sonoma County Local Oversight Program (LOP) on 4/20/06. Eugene and Teri Crozat were issued a directive to submit a workplan to complete a soil and groundwater investigation. A Sensitive Receptor Survey was submitted in Nov. 2006 and closure was requested. The request was denied since a groundwater investigation was not completed in accordance with LOP policy and regional investigation guidelines. An attempt was made by the Crozat's attorney to transfer the site to the Regional Board in July 2007. The Regional Board, however, supported the LOP's requirement to complete an investigation and the site remained with the LOP. On 1/5/09 the Crozat's attorney requested the Local Review Process to appeal the requirement for investigation. The appeal process was exhausted on 12/22/09 when the LOP and Regional Board maintained that site investigation is required. Mr. & Mrs. Crozat were once again directed to submit a workplan to investigate the site. On 4/14/10 enforcement was started since a workplan had not been received. The workplan was not submitted by the 5/14/10 date. The site is out of compliance with

1000395165

regulator directives. A second level enforcement letter was sent on 5/25/10. Further action will be taken if the workplan is not received by 6/25/10. Investigation of the site has been complete. The SFBRWQCB concurred with a request for closure on 4/24/13. Site closed July 3, 2013.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

City,State,Zip: PETALUMA, CA 94952
Lead Agency: SONOMA COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609700854
Global Id: T0609700854
Latitude: 38.2390391253393
Longitude: -122.63557675
Status: Open - Remediation
Status Date: 08/10/2007
Case Worker: DB
RB Case Number: 49-0087
Local Agency: SONOMA COUNTY LOP
File Location: Local Agency
Local Case Number: 00001309
Potential Media Affect: Well used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: excerpted from reports on file: The site has been in continuous operation as a gas station and automated car wash since approximately 1970. Station was remodeled in 1997 and new tanks, dispensers and piping were installed. Contaminated soils were overexcavated and disposed. Soil and groundwater remediation began in February 2000.

Completed Document Type: 5 Year Review Reports
Completed Date: 12/30/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/19/2004
Comments: Five-Year review was performed. It recommends to continue the yearly cap inspections.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 05/28/1999
Comments: RA - Removal Implementation Report approved. Approximately 3,000 cubic yards of lead-contaminated soil was excavated. The soil was consolidated in a 136-foot by 76-foot by 9-foot consolidation pit located in the southern portion of the property. The capped area is approximately 1/4 of an acre.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 08/21/1998
Comments: RAW - Approved a Removal Action Workplan and Negative Declaration. The removal activities include excavation and consolidation onsite of lead contaminated soils. The consolidation area will be capped with asphalt and a deed restriction recorded to prevent use of the area in a way which may damage the cap.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/02/2004
Comments: Minor modifications to the remedy were added through this Removal Action Workplan Amendment . During recent site development activities, additional lead-containing soil was found during demolition of the former warehouse at 1006 Lakeville Highway. The RAW Amendment adds to the scope of the removal action excavation and placement of approximately 100 cubic yards of lead-containing soil into an 4 feet and 100 feet long extension on the west side of the current consolidation pit.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 12/22/2008
Comments: DTSC conducted its annual inspection of the cap and to verify compliance with the land use restrictions that were placed on the Site through a Land Use Covenant. Upon observing the current site conditions, DTSC concluded that the selected removal action remains protective of human health and the environment. Impacted soil remains under the original asphalt surfaces, which are in good shape and remain an effective barrier which prevents human exposure.

Completed Document Type: *Correspondence - Received
Completed Date: 01/07/2011
Comments: DTSC received and reviewed a letter from McPhail Properties, Inc., dated October 18, 2010, that proposed development on the site is consistent with the Land Use Covenant. DTSC agreed that the proposed 15,000- 20,000 square foot retail building is consistent with the Land Use Covenant. The site will continue to be subject to the Land Use Covenant requirements. A Soil Management Plan must be submitted and approved by DTSC before the construction of the retail building. When construction is done a completion report and as-built drawing will be submitted to DTSC.

Comments: Five-Year review was performed. It recommends to continue the yearly cap inspections.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 05/28/1999
Comments: RA - Removal Implementation Report approved. Approximately 3,000 cubic yards of lead-contaminated soil was excavated. The soil was consolidated in a 136-foot by 76-foot by 9-foot consolidation pit located in the southern portion of the property. The capped area is approximately 1/4 of an acre.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 08/21/1998
Comments: RAW - Approved a Removal Action Workplan and Negative Declaration. The removal activities include excavation and consolidation onsite of lead contaminated soils. The consolidation area will be capped with asphalt and a deed restriction recorded to prevent use of the area in a way which may damage the cap.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/02/2004
Comments: Minor modifications to the remedy were added through this Removal Action Workplan Amendment . During recent site development activities, additional lead-containing soil was found during demolition of the former warehouse at 1006 Lakeville Highway. The RAW Amendment adds to the scope of the removal action excavation and placement of approximately 100 cubic yards of lead-containing soil into an 4 feet and 100 feet long extension on the west side of the current consolidation pit.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2020	Source: EPA
Date Data Arrived at EDR: 05/06/2020	Telephone: N/A
Date Made Active in Reports: 05/28/2020	Last EDR Contact: 08/03/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 10/12/2020
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2020

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/27/2020	Source: EPA
Date Data Arrived at EDR: 05/06/2020	Telephone: 800-424-9346
Date Made Active in Reports: 05/28/2020	Last EDR Contact: 08/03/2020

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 05/21/2020	Last EDR Contact: 06/22/2020
Number of Days to Update: 57	Next Scheduled EDR Contact: 10/05/2020

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 05/21/2020	Last EDR Contact: 06/22/2020
Number of Days to Update: 57	Next Scheduled EDR Contact: 10/05/2020
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 05/21/2020	Last EDR Contact: 06/22/2020
Number of Days to Update: 57	Next Scheduled EDR Contact: 10/05/2020
	Data Release Frequency: Quarterly

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/15/2020	Source: Department of the Navy
Date Data Arrived at EDR: 05/19/2020	Telephone: 843-820-7326
Date Made Active in Reports: 06/18/2020	Last EDR Contact: 08/04/2020
Number of Days to Update: 30	Next Scheduled EDR Contact: 11/23/2020
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/20/2020	Telephone: 703-603-0695
Date Made Active in Reports: 05/15/2020	Last EDR Contact: 05/15/2020
Number of Days to Update: 85	Next Scheduled EDR Contact: 09/07/2020
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/20/2020	Telephone: 703-603-0695
Date Made Active in Reports: 05/15/2020	Last EDR Contact: 05/15/2020
Number of Days to Update: 85	Next Scheduled EDR Contact: 09/07/2020
	Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/22/2020
Date Data Arrived at EDR: 03/24/2020
Date Made Active in Reports: 06/18/2020

Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 04/27/2020

UST CLOSURE: Proposed Closure of Underground Storage Tank (UST) Cases

UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/18/2020	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 03/19/2020	Telephone: 202-307-1000

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Public Records Request Number: PR2-081220-03

Location(s): 348 E. Washington St., Petaluma, CA 94952

Dear Mr. Cloven:

On [August 12th, 2020](#) the Department of Toxic Substances Control (DTSC) received your email of [August 12th, 2020](#) requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSC's data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at [510-540-3800](tel:510-540-3800) or via email at Berkeleyfileroom@dtsc.ca.gov.

Sincerely,
Carl Rose

FILE REVIEW REQUEST

You will receive a response to your request within 10 days.

Requestor Information	Contact Name Peter Cloven	Date 8/11/2020
	Agency/Affiliation Pinnacle Environmental, Inc.	
	Phone 925/673-5500	Email pcloven@pei-env.com
Information Requested	Address or File Name 315 D Street & 348 East Washington, Petaluma, CA	
	Information Needed/Scope We desire to review any records related to permitting, hazardous materials storage, hazardous material storage, disposal and releases, underground storage tanks and/or other relevant information pursuant to a Phase I Environmental Site Assessment	

Statement of Responsibility

I understand that the following rules apply to my use of the file review are:

1. No document may be removed from the file review area.
2. No file may be taken apart.
3. Bags or briefcases must be placed on the floor, under the work surface.
4. No pens are allowed in the file review area. Pencils are permitted.
5. No marking of the file documents is permitted.
6. Files must be returned in the same condition in which they were found.
7. Please take phone calls outside the office.

Copies may be requested at a rate of \$ 0.10 per copy. If the number of copies requested is 10 or fewer, we will make every effort to make copies while you wait. For larger copy requests, your request will be prioritized along with other tasks. We will make every effort to complete the copying and mail them to you within 10 days of your request.

Please sign below to acknowledge that you understand the file review and photocopy request policy stated above and agree to comply with these terms.

Subject: Record request for 348 E Washington

Good afternoon,

Your request for public information has been managed in accordance with the California Public Records Act, Cal. Govt. Code §§ 6250-6270. Environmental Health and Safety (EHS) has completed its search for this information and does not have any records for this address.

***OUR RECORDS ARE NOW SCANNED AND AVAILABLE ON OUR PUBLIC ACCESS VIEWER*. The majority of our records are located on this viewer.**

Records may now be accessed via our Public Access Viewer on our web site. Please go to this web address; <http://sonomacounty.ca.gov/Health/Environmental-Health/Public-Records-Requests/>

*Please follow the directions on the website to view our records. We recommend searching an address by typing an * before and after the street number and street name – i.e. type ***1234 N Petaluma***, and/or ***1234 Petaluma***. Do not use Rd, Ave, St, etc.*

Environmental Health and Safety (EHS) does not have jurisdiction for some of the programs listed in your request. We recommend you submit a records request to the local CUPA and Code Enforcement for these addresses. The CUPA's and Code Enforcements located in Sonoma County are listed below;

- For all records – Geotracker; <http://geotracker.waterboards.ca.gov/>
- USTs, Hazardous materials/waste, Non-leaking underground storage tanks, above ground storage tanks, well and septic;
 - **CUPA – PRMD** – Alicia.Ponce@sonoma-county.org or 707-565-1152
 - Santa Rosa Fire – cupa@srcity.org or 707-543-3537
 - Petaluma Fire – <http://cityofpetaluma.net/firedept/hazmat.html>
 - Healdsburg Fire for Sebastopol – jboaz@ci.healdsburg.ca.us or 707-431-3360
 - **Code Enforcement**
 - Sonoma County Permit and Resource Management (PRMD) – 707-565-1992
 - Santa Rosa – 707-543-3198
 - Petaluma – 707-778-4469
 - Sebastopol – 707-823-8597

Please let me know if you require anything further.

Best regards,
Paula Kramer
Senior Office Assistant

4.8.2 Historical Review

SPTCo valuation maps indicate that this approximately 10-mile section was serviced by seven stations. Stindt (1964) indicates that an additional two stations also were located in this section (Appendix A). Features that potentially could affect environmental conditions at the Site were identified at the Petaluma station and the McNear station. These station properties and other potential historical environmental features at and along the Site are discussed below.

Petaluma Station

The Petaluma station is located at milepost 38.5 in the city of Petaluma. According to information presented by Stindt (1964), the Petaluma station served as a fuel and water station; the station also contained an engine house (roundhouse) from 1870 until 1908 (Figure 15). The SPTCo structure record index reports that a water tank existed at the Site until 1955; however, fuel distribution facilities are not recorded. Additionally, SPTCo valuation maps and the structure record index do not list the former engine house, possibly because it reportedly was dismantled shortly after SPTCo and Santa Fe Railroad Company jointly acquired the rail line in 1906.

Another feature shown on SPTCo valuation maps and listed in the structure record index that potentially may have affected environmental conditions at the Site was a turntable (retired in 1941). Two tool houses, both retired in 1960, were located on the station property; there is no record of USTs associated with the tool houses or at other locations on the station property. According to the SPTCo structure record index, additional structures that potentially could impact environmental conditions existed on the station property that are not shown on the valuation maps. These structures included main shops and an oil house, all of which were retired in 1947.

Geomatrix reviewed Sanborn maps showing the Petaluma station property and vicinity dated 1888, 1906, 1910, 1923, and 1950. Throughout this period, these maps showed land use near the station to be primarily commercial and industrial. In addition to features shown on

the valuation maps, the 1906 Sanborn map confirms the presence of the former engine house (labeled as a roundhouse on the Sanborn map) and a turntable in the northwest corner of the property. The engine house and turntable were still present in 1910, but had disappeared by 1923. Generally, other structures shown on the Sanborn maps are present on the SPTCo valuation maps; the tool houses and shops are not shown on the Sanborn maps.

Other Potential Environmental Features On Site

No other on-site historical features that could impair environmental conditions were identified during the historical review for Section VII of the Site.

Potential Environmental Features Off Site

Within this section were off-site facilities that potentially could environmentally affect the Site. The California Petroleum Corporation was shown on a SPTCo valuation map immediately east of the Site at approximately milepost 36.8. The valuation map shows a tank near the rail line at this location; it is not known whether this is an above- or underground tank.

Various facilities abutted the east side of the Site between milepost 38.0 and 38.2 (south of the Petaluma station), as shown on SPTCo valuation maps and Sanborn maps. These facilities included, north from milepost 38, the Petaluma Fertilizer Company, the Stapleton & Smith Salvage Warehouse, a Union Oil facility, the Petaluma Tanning Company, and a Standard Oil facility. Associated with the oil company facilities are large, aboveground storage tanks, oil houses, and warehouses. The Petaluma Tanning Company included tannery buildings, a large-diameter aboveground tank, and a power house.

4.8.3 Field Reconnaissance

A walking reconnaissance was performed on 28 through 29 July 1992 from milepost 44 to 36.5 and included Penn Grove and Petaluma. A high-rail reconnaissance was performed on 11 August 1992 from milepost 36.5 to 33. Observations of where historical environmental

features where noted, and of other potential environmental features made during the field reconnaissance are described below.

Petaluma Station

The station building and American Railway Express building currently exist at the station property. These buildings currently are used by SPTCo personnel for administrative purposes.

Six 55-gallon drums were observed stockpiled on the station property. Four of the drums appeared to contain petroleum hydrocarbon-based liquids; two drums were empty. An approximately 100-square foot surface stain was observed on soil adjacent to the drums.

Three empty storage tanks ranging in size from 500 to 5000 gallons were observed immediately south of the American Railway Express building. The surface soil in the immediate vicinity of the drums was stained, possibly with petroleum product. Heavy petroleum hydrocarbon staining also was observed on a spur track on the west side of the station property.

McNear Station

The McNear station is located at milepost 37.1. The SPTCo structure record index for this property indicated that a water-producing well existed at this property (Table 2). There is no record of closure for the well.

Off-Site Environmental Features of Potential Significance to the Site

In addition to the features observed at the Petaluma station, additional potential environmental features were observed in this section, as described below.

Haynie Fuel Service: Haynie Fuel Service is located along the western edge of the Site near milepost 35.9. An approximately 25-foot by 10-foot apparent petroleum surface stain was observed in a drainage ditch partly within the western site boundary. Diesel fuel

Geomatrix Consultants

Generally, the Phase III samples collected from 2.0 feet bgs, with the exception of one (HFS3-2.0), did not contain TPHd or TPHm at concentrations greater than the screening criteria (Section 5.1).

Geomatrix reviewed chromatograms of selected samples. The chromatographic trace suggests that the majority of the TPH present is the later-boiling fraction, and is weathered.

Discussion

Based on results of the Phase II and III sampling programs, elevated concentrations of later-boiling, weathered TPH adjacent to the Haynie Fuel Service facility appear to be limited to shallow soil in the drainage ditch. Where detected, TPH is generally confined to within the upper 2 feet of soil, and concentrations are significantly lower than the remedial criteria. Therefore, Geomatrix recommends no further action at this location.

6.2.3 Milepost 38.5 (Petaluma Station)

General

The Petaluma Station is located at milepost 38.5 in the City of Petaluma and formerly served as a water, fuel, and train maintenance station. As shown on Figure 4, the former maintenance facilities previously identified in the Phase I program that were located in the northwestern portion of the station property are excluded from the sale property.

However, a Phase II sampling program was developed for the portion of the Petaluma Station within the current sale property to evaluate whether significant environmental impacts to soil may have occurred due to the proximity of the maintenance operations, and from potential chemical usage and handling that may have occurred throughout the station property.

Sampling Program

Random sampling was performed within the sale property to evaluate potential significant environmental impacts to soil. This methodology was used because the site historically

operated as a fueling and maintenance station, and no information is available that delineates where specific activities occurred.

For the Phase II program, six borings were drilled at the locations shown on Figure 4. The drilling locations were selected by developing an approximately 25-foot-square grid that extended east of the existing American Railway Express building to the west side of the station building and to the north and south sale boundaries, with each node on the grid a potential boring location. The nodes were numbered, and boring locations PB1 through PB6 were randomly selected. Soil samples were collected from four depths from each boring. The samples were composited into one sample per boring for analysis of TPHd, TPHm, SVOCs, and metals. In addition, two discrete soil samples (PB1-6.0 and PB3-7.0) were collected and analyzed for VOCs. Groundwater was encountered at the time of drilling at depths ranging from approximately 9.8 to 12.5 feet bgs.

Analytical Results

TPHd, TPHm, and SVOCs were not detected above method reporting limits and metals were not detected above background concentrations in the six composite samples (Tables 2 and 3). VOCs were not detected above method reporting limits in the discrete soil samples (Table 2).

Discussion

Based on results of the Phase II sampling at the Petaluma Station, we recommend no further action at this location.

6.2.4 Milepost 53.7 (Santa Rosa Station)

General

The Santa Rosa Station is located at milepost 53.7 in the City of Santa Rosa. West Third Street bisects the station into two portions. The station has been separated into southern and northern portions, as indicated on Figures 5A and 5B, for discussion purposes.

TABLE 1

SUMMARY OF RECOMMENDATIONS
 PHASE II AND III SAMPLING PROGRAMS
 Northwestern Pacific Railroad Corridor
 Novato to Willits, California

Site Location	Recommendations for Further Action	Comments
Novato Station	No further action	Phase III sampling indicates distribution of TPH in soil is limited.
Haynie Fuel Service	No further action	Chromatograms show that TPH, where detected, is later-boiling fraction and weathered. The distribution of TPH in soil is limited, and concentrations are below the remedial criteria.
Petaluma Station	No further action	No chemicals detected, except metals at background concentrations.
Santa Rosa Station (south)	No further action	Known upgradient source of TPH in groundwater. Distribution of lead in soil appears limited and concentrations are below remedial criteria.
Santa Rosa Station (north)	No further action	Arsenic concentrations detected during Phase III program not elevated relative to screening criteria.
Santa Rosa Station (MP 54.4)	No further action	No TPH detected in Phase II program.
Fulton Station	No further action	Additional grab groundwater samples collected during Phase III program contained less than 1 ppm dissolved TPH, indicating insignificant impact to groundwater; no TPH detected in shallow soil.
Mark West Station	No further action	No TPH detected in Phase II program.
Windsor Station	No further action	No TPH detected in Phase II program.
Healdsburg Station	No further action	Phase II sampling indicate distribution of TPH in soil is limited.
Healdsburg Municipal Septic Tanks	No further action	Less than 1 ppm TPH present in Phase III grab groundwater samples, suggesting insignificant impact to groundwater.
Evans Ceramics	No further action	The distribution of elevated metals concentrations, where detected during Phase III program was limited and below remedial criteria.

Subject: Soil and Grab Groundwater Sampling Results
Petaluma Station Option Property
Petaluma, California

Dear Mr. Jang:

Geomatrix Consultants, Inc. (Geomatrix), has prepared this letter report to present the results of the soil and grab groundwater sampling and chemical analysis program conducted at the subject site (Figure 1). Geomatrix performed the work described herein on behalf of Union Pacific Railroad (UPRR) and the Northwestern Pacific Railroad Authority in accordance with our 29 April 1997 work plan and our 12 November 1997 confirmation of extension and work plan. The 29 April work plan was approved by the Regional Water Quality Control Board, San Francisco Bay Region (RWQCB), in its letter dated 10 July 1997; and the 12 November confirmation of extension and work plan was approved by the RWQCB in its letter dated 2 December 1997.

During a Phase I environmental site assessment conducted in 1992 and early 1993, several areas of possible environmental impact were identified that may have resulted from historical features or from features identified during the Phase I assessment. The objective of the sampling and chemical analysis program defined in the April 1997 work plan was to evaluate the possible presence of total petroleum hydrocarbons characterized as diesel (TPHd) and as motor oil (TPHmo), polynuclear aromatic compounds (PNAs), and metals in soil in the vicinity of historical features and observed soil staining; and dissolved TPHd, and benzene, toluene, ethylbenzene, and xylenes (BTEX) in shallow groundwater. The objective of the sampling and chemical analysis program defined in the November 1997 work plan was to evaluate whether soil has been affected by arsenic as a result of former railroad activities, or whether its presence, on average, is within expected background concentrations for this site. A description of the sampling program, including sampling methods and analytical results, conclusions, and recommendations is presented below.

Mr. John Jang
Regional Water Quality Control Board
15 January 1998
Page 2

FIELD METHODS

Pre-field Activities

Sampling activities were conducted on 3 through 5 September 1997, and on 2 December 1997. Prior to sampling, Geomatrix contacted Underground Service Alert and an underground utility clearance was performed at each boring location by Cruz Brothers of Milpitas, California. Boring permits were obtained from the Sonoma County Department of Health Services prior to field activities (Attachment A).

September 1997

Thirteen borings were drilled by Precision Sampling, Inc. (Precision), of San Rafael, California, using direct-push technology (DPT) during the September sampling event. Borings B-8 through B-11 were sampled for both soil and groundwater, and borings B-12 and B-13 were sampled for groundwater only (Figure 2). Equipment used to drill and collect samples was steam-cleaned or washed with Alconox and municipal water before sampling at each location. During borehole advancement, Geomatrix personnel described the soil core, noting lithology.

For the September 1997 sampling event, a total of four soil samples were collected from each boring; the upper two and the lower two soil samples were mixed into two composite samples for chemical analysis by the analytical laboratory. Sample depths are shown on Table 1. The soil samples were collected in clean brass tubes and sealed at each end with Teflon sheets, plastic end caps, and duct tape.

To collect grab groundwater samples from borings B8 through B13, temporary wells were constructed of 1-inch-diameter, polyvinyl chloride (PVC) piping consisting of blank casing and slotted well screen. Based on depth to groundwater at the time of drilling, the well screens were placed from 14 to 19 feet below ground surface (bgs) in borings B-8 through B-11 and 11 to 16 feet in borings B-12 and B-13.

After sufficient groundwater had accumulated inside the PVC casing (usually within one hour), grab groundwater samples were collected. Groundwater was not readily apparent during visual observation of the soil core for borings B-10 and B-11. However, after allowing boring B-10 to remain open for approximately three hours, we were able to collect sufficient sample volume for TPHd and TPHmo analyses. The borehole was left open overnight for an additional 14 hours and sufficient sample volume was collected for BTEX analysis. After allowing boring B-11 to remain open for 15 hours, we were able to collect adequate sample volume for BTEX analysis. We were able to collect sufficient sample volume for TPHd and TPHmo analyses after allowing the B-11 borehole to remain open an additional 24 hours. A

Mr. John Jang
Regional Water Quality Control Board
15 January 1998
Page 3

0.75-inch-diameter disposable PVC bailer was used to collect the samples. Grab groundwater samples were collected in laboratory-supplied sample containers. For quality control/quality assurance (QA/QC) purposes, Geomatrix collected one duplicate grab groundwater sample and an equipment blank each day in the field.

Both soil and grab groundwater samples were then labeled and placed in an ice-cooled chest until delivery to the analytical laboratory under Geomatrix chain-of-custody procedures. Copies of the chain-of-custody records are included in Attachment B.

Soil cuttings generated during drilling and equipment wash water were placed in 55-gallon drums, which were labeled and stored on site pending analytical results. Upon completion of sampling activities, the boreholes were backfilled with cement grout to the ground surface.

December 1997

Five borings (B-8A, B-8B, B-10A, B-10B, and B-10C) were drilled in December 1997; these borings were sampled for soil only. The approximate locations of the borings are shown on Figure 2. The borings were drilled by Precision using DPT. For the December sampling event, up to seven discrete soil samples were collected from each boring, and selected samples were analyzed (Table 1). The remaining samples were placed on hold pending laboratory analytical results for the selected samples. Sample collection and handling procedures were similar to those performed in September 1997, and are described above. Following completion of the sampling, the boreholes were grouted to ground surface using cement grout.

ANALYTICAL METHODS

The samples were analyzed by American Environmental Network of Pleasant Hill, California, a state-certified analytical laboratory. The soil samples collected in September 1997 were analyzed for TPHd and TPHmo by U.S. Environmental Protection Agency (EPA) Method 8015; PNAs by EPA Method 8310; and 17 California Title 22 metals by EPA Method 6000/7000 series. The soil samples collected in December 1997 were analyzed for arsenic by EPA Method 7060. Grab groundwater samples were analyzed for TPHd by EPA Method 8015 and BTEX by EPA Method 8020. TPHd analyses for grab groundwater samples were performed after silica gel cleanup by EPA Method 3630M. The QA/QC grab groundwater samples were analyzed for BTEX by EPA Method 8020.

Mr. John Jang
Regional Water Quality Control Board
15 January 1998
Page 4

RESULTS

Stratigraphy

The lithology observed during drilling indicate that the site is generally underlain by 4 to 9 feet of silty sand, which is underlain by clay and sandy clay to 19 feet bgs, the maximum depths of the borings. The stratigraphy varied in borings B-6 and B-7, with 3 to 4 feet of silt underlain by clay. Groundwater was encountered at 16.5 feet bgs in boring B-8, 14 feet bgs in boring B-9, 14.5 feet bgs in boring B-12, and 13 feet bgs in boring B-13 at the time of sampling. As previously stated, groundwater was not apparent during visual observation of the soil cores for borings B-10 and B-11.

Analytical Results (September 1997 Event)

Soil analytical results are summarized in Table 1. TPHd was not detected in any of the soil samples. TPHmo was detected in 11 of the 22 soil samples at concentrations ranging from 8 to 150 milligrams per kilogram (mg/kg). Where detected, TPHmo was present only in the uppermost composite sample from each boring (from sample depths of 1.5 feet and 3.5 feet bgs or 1.5 feet and 4.5 feet bgs), except for the deeper composite sample from borings B-10 and B-11, which contained TPHmo at concentrations of 8 and 10 mg/kg, respectively.

Only one PNA was detected; indeno (1,2,3-cd) pyrene was reported in one of the 22 samples analyzed at a concentration of 0.078 mg/kg. This PNA was present in the shallower composite sample from boring B-11 and was not detected in the deeper composite sample from this boring location.

Metals were detected in the soil samples analyzed at concentrations that are below or within expected background ranges for this area (see Table 1). However, arsenic was detected in two samples at concentrations slightly elevated relative to other on-site arsenic concentrations. Arsenic generally was detected at concentrations ranging between 1 and 7 mg/kg, except at boring locations B-8 and B-10. At boring B-8, arsenic was detected in the deeper composite sample (from depths of 7 and 9 feet bgs) at a concentration of 15 mg/kg; in boring B-10, the shallower composite sample (from depths of 1.5 and 3.5 feet bgs) contained arsenic at a concentration of 18 mg/kg. These concentrations are less than 10 times the Soluble Threshold Limit Concentration (STLC)¹ for arsenic and are less than the average background concentration for the Bay Area region recently published by Lawrence Berkeley National Laboratory² (Table 1).

¹ California Code of Regulations, Title 22, Section 66261.24.

² Lawrence Berkeley National Laboratory, 1995, Protocol for Determining Background Concentrations of Metals in Soil at Lawrence Berkeley National Laboratory, 1 August.

Mr. John Jang
Regional Water Quality Control Board
15 January 1998
Page 5

Grab groundwater analytical results are summarized in Table 2. TPHd, benzene, ethylbenzene, and total xylenes were not detected in the grab groundwater samples analyzed. Toluene was detected in only one sample, from boring B-13, at a concentration of 0.06 micrograms per liter ($\mu\text{g/l}$). BTEX were not detected in the QA/QC grab groundwater samples. A copy of the laboratory analytical report for the September 1997 sampling event is included in Attachment B.

Analytical Results (December 1997 Event)

Due to the slightly elevated concentrations relative to other on-site arsenic concentrations, additional soil samples were collected and analyzed adjacent to boring locations B-8 and B-10. Because arsenic was detected in the deeper composite sample (from depths of 7 and 9 feet bgs) from boring B-8 at a concentration of 15 mg/kg, discrete samples from depths of 7 and 9 feet bgs were analyzed from borings B-8A and B-8B, which were drilled within 5 feet of boring B-8 (Figure 2). At boring B-8A, arsenic was detected at a concentration of 3.2 mg/kg in the 7-foot sample; no arsenic was detected in the 9-foot sample from this boring. At boring B-8B, arsenic was detected at a concentration of 1.4 mg/kg from the 7-foot sample; arsenic also was not detected in the 9-foot sample at this location.

Because arsenic was detected in the shallower composite sample (from depths of 1.5 and 3.5 feet bgs) from boring B-10 at a concentration of 18 mg/kg, soil samples were collected for analyses from depths of 0.5 and 2 feet bgs from borings B-10A, B-10B, and B-10C (located within 5 feet of boring B-10; Figure 2). At boring B-10A, arsenic was detected at 15 and 1.9 mg/kg from 0.5 and 2.0 feet bgs, respectively. At boring B-10B, arsenic was detected at 5.3 and 2.3 mg/kg from 0.5 and 2.0 feet bgs, respectively. At boring B-10C, arsenic was detected at 11 and 14 mg/kg from 0.5 and 2.0 feet bgs, respectively. A copy of the laboratory analytical report is included in Attachment B.

The analytical results from the December sampling event indicate that concentrations of arsenic in the vicinity of borings B-8 and B-10, on average, are similar to arsenic concentrations throughout the site and are less than the recently-published LBNL background concentration.

CONCLUSIONS AND RECOMMENDATIONS

Based on the soil and grab groundwater analytical results, Geomatrix has developed the following conclusions:

Mr. John Jang
Regional Water Quality Control Board
15 January 1998
Page 6

- Petroleum hydrocarbons characterized as motor oil were detected at low concentrations in shallow soil at the site. TPHmo consists of later-boiling petroleum hydrocarbons, is relatively immobile and insoluble, and can remain in soil with no impact to groundwater.
- Although TPHmo was detected, PNAs were not detected in any of the soil samples analyzed except for indeno (1,2,3-cd) pyrene in one boring (B-11-1.5,3.5); indeno (1,2,3-cd) pyrene was not detected in the deeper sample at this location. Based on the absence of this compound at depth and its relative insolubility, it is unlikely that indeno (1,2,3-cd) pyrene could impact groundwater. The concentration of this compound was compared to its EPA Preliminary Remediation Goal³ (PRG) in soil at industrial sites. The PRG is intended as an initial screening tool to evaluate the potential for risk to human health. The concentration of indeno (1,2,3-cd) pyrene detected is two orders of magnitude less than its PRG.
- Metals detected in the soil samples are within background concentrations expected in this area.
- Arsenic was detected in two borings (B-8 and B-10, drilled in September 1997) at elevated concentrations relative to other concentrations detected at the site. Additional sampling near borings B-8 and B-10 demonstrated that arsenic concentrations in these areas are similar to other arsenic concentrations detected on site and are within the recently-published background concentration for this element. The concentrations also are below industrial PRGs for acceptable cancer risk levels (Table 1).
- Groundwater has not been impacted by petroleum hydrocarbons or related constituents. The absence of TPHmo in groundwater is consistent with its chemistry, as described above. In addition, BTEX were not detected in the grab groundwater samples.

Based on the analytical data, the site has not been significantly impacted and does not pose a threat to human health and the environment. Therefore, **no further investigation or remediation is recommended.** If you have any questions or require additional information please feel free to contact Elizabeth Wells or either of the undersigned.

Sincerely,

Notes:

Ag = Silver, As = Arsenic, Ba = Barium, Be = Beryllium, Cd = Cadmium, Co = Cobalt, Cr = Chromium, Cu = Copper, Hg = Mercury, Mo = Molybdenum, N = Nickel, Pb = Lead, Sb = Antimony, Se = Selenium, Tl = Thallium, V = Vanadium, Zn = Zinc

1. Samples collected by Geomatrix Consultants, Inc., on 3, 4, and 5 September 1997 and analyzed by American Environmental Network of Pleasant Hill, California.
2. Sample depth in feet below ground surface.
3. TPHd = Total petroleum hydrocarbons quantified as diesel by EPA Method 8015M.
4. TPHmo = Total petroleum hydrocarbons quantified as motor oil by EPA Method 8015M.
5. PNAs = Polynuclear aromatic hydrocarbons analyzed by EPA Method 8310.
6. Metals analyzed by EPA Method 6000/7000 series.
7. Background concentrations from maps presented in Shacklette, H.T., and Boerngen, J.G., 1984, Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States, U.S. Geological Survey Professional Paper 1270.
8. No background concentration available.
9. The background concentration of arsenic in the region, based on a study conducted by Lawrence Berkeley National Laboratory (LBNL) from samples collected in the East Bay Hills, is 19 mg/kg (LBNL, 1995, Protocol for Determining Background Concentrations of Metals in Soil at Lawrence Berkeley National Laboratory, 1 August).
10. STLC = Soluble threshold limit concentration, California Code of Regulations, Title 22, Section 66261.24.
11. PRG = Preliminary remediation goals for soil at industrial sites, U.S. Environmental Protection Agency, 1996, Region IX, Preliminary Remediation Goals, 1 August.
12. The industrial PRG for arsenic at cancer risk levels of 1×10^{-6} to 1×10^{-4} ranges between 2.4 mg/kg and 240 mg/kg, respectively. At 1×10^{-6} cancer risk, the PRG is less than background and therefore is not applicable.
13. Assumes one-sixth of total chromium is in the hexavalent form.
14. Based on mercuric chloride (inorganic mercury).
15. Based on thallic oxide.
16. Of the four soil sampling depths in each boring location, the shallower samples were composited into one sample and the deeper samples were composited into one sample.
17. ND = Non detect. A complete list of analytes and detection limits is included in the laboratory report as Appendix A.
18. NA = not analyzed.

Mr. John Moe
Union Pacific Railroad Co.
One Market Plaza, Room 812
San Francisco, CA 94105

Dear Mr. Moe:

SUBJECT: Case Closure for Petaluma Station Option Property,
Northwestern Pacific Railroad, Petaluma, Sonoma County

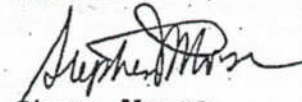

The subject site formerly served as a water, fuel, and train maintenance station. Board staff have reviewed the soil and groundwater sampling results submitted by your consultant, Geomatrix Consultants, Inc., for the subject site. The soil results indicate that TPH-d was not detected, that TPH-mo was detected at a maximum concentration of 150 mg/kg, that indeno (1,2,3-cd) pyrene was the only PNA detected (at 0.078 mg/kg, which is two orders of magnitude less than its PRG), and that the metals detected were all within background concentrations. Groundwater samples were all below detection limits for TPH-d and BTEX.

Based on the information you have provided to us and with the provision that the information provided was accurate and representative of site conditions, no further investigation or remediation at the subject site will be required by this Regional Board.

Attached is the site summary form for the subject site. If you have any questions regarding this letter, please call John Jang of my staff at (510) 286-0554.

Sincerely,

Loretta Barsamian
Executive Officer

Steve Morse
Chief, Toxics Cleanup Division

cc: Honorable Mayor Patricia Hilligoss
Mayor of Petaluma
11 English Street
P. O. Box 61
Petaluma, CA 94953

SITE CLOSURE SUMMARY

I. AGENCY INFORMATION

Date: February 18, 1998

Agency Name: SF Bay Regional Water Quality Control Board	Address: 2101 Webster Street
City/State/Zip: Oakland, CA 94612	Phone: (510) 286-1255
Responsible Staff Person: John Jang	Title: Associate Water Resources Control Engineer

II. SITE INFORMATION

Site Facility Name: Petaluma Station Option Property				
Site Facility Address: Petaluma				
RB/SMS Case No.: 49S0016	Local or LOP Case No.: NA	Priority: 1C3		
URF Filing Date: NA	SWEEPS No.: NA			
Responsible Parties (include addresses and phone numbers)				
Mr. John Moe (415) 541-2557				
Union Pacific Railroad Company				
One Market Plaza, Room 812				
San Francisco, CA 94105				
Tank No.	Size in Gallons	Contents	Closed In—Place/Removed?	Date
NA				

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: unknown		
Site characterization complete? Yes	Date Approved By Oversight Agency: Closure Itz (2/20/93)	
Monitoring wells installed? No	Number: 0	Proper screened interval?
Highest GW Depth Below Ground Surface:	Lowest Depth:	Flow Direction:
Most Sensitive Current Use: unknown		
Most Sensitive Potential Use unknown and Probability of Use		
Are drinking water wells affected? No	Aquifer Name:	
Is surface water affected? No	Nearest/Affected SW Name:	
Off-Site Beneficial Use Impacts (Addresses/Locations): none known		
Report(s) on file? Yes	Where is report(s) filed? RWQCB's office	

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank		none	
Piping		none	
Free Product		none	
Soil		none	
Groundwater		none	
Barrels		none	

MAXIMUM DOCUMENTED POLLUTANT CONCENTRATIONS—BEFORE AND AFTER CLEANUP

POLLUTANT	Soil (ppm)		Water (ppb)		POLLUTANT	Soil (ppm)		Water (ppb)	
	Before	After	Before	After		Before	After	Before	After
TPH (Gas)					Xylene			ND	
TPH (Diesel)	ND		ND		Ethylbenzene			ND	
Benzene			ND		Oil & Grease				
Toluene			ND		Heavy Metals	backgr -ound			
PNAs	ND+				Motor Oil	150			

Comments (Depth of Remediation, etc.):

No cleanup at the site was attempted nor was it required

+ All PNAs were ND except indeno (1,2,3-cd) pyrene at 0.078 mg/kg (two orders of magnitude less than it's PRG).

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Yes		
Site Management Requirements: none required		
Monitoring Wells Decommissioned:	Number Decommissioned:	Number Retained:
List Enforcement Actions Taken: none taken		
List Enforcement Actions Rescinded:		

V. TECHNICAL REPORT CORRESPONDENCE ETC., THAT THIS CI ARE RECOMMENDATION WAS BASED UPON

Title: (1) Soil and Grab GW Sampling Results by Geomatrix	Date: 1/15/98
(2) Work Plan for Soil and GW Sampling by Geomatrix	4/29/97
(3) RWQCB letters dated 2/20/98, 12/2/97, and 7/10/97	
(4) Geomatrix letter	11/12/97
(5) Letter from City of Petaluma	7/9/97
(6) Letter from Sonoma County Board of Supervisors	7/7/97
(7) Letter from Sonoma County Transportation Coalition	6/26/97

VI. ADDITIONAL COMMENTS, DATA, ETC.

PLEASE INCLUDE/ATTACH THE FOLLOWING AS APPROPRIATE:

- 1) SITE MAP INDICATING TANK PIT LOCATION, MONITORING WELL LOCATION, GROUNDWATER GRADIENT, ETC; AND,
- 2) SITE COMMENTS WORTHY OF NOTICE (E.G., AREA OF RESIDUAL POLLUTION LEFT IN PLACE, DEED NOTICES ETC.)

The site is designated as an option sale property for the Northwestern Pacific Railroad (NWPRR) transaction between the Southern Pacific Transportation Company [(SPTC), currently Union Pacific Railroad (UPRR)] and the NWPRR Task Force. The Petaluma station formerly served as a water, fuel, and train maintenance station. A structure identified as an engine house (roundhouse) was present on the site from 1870 until at least 1908. A turntable at the site until 1941. A tool house near the turntable was retired in 1960. Other historical features included shops and an oil house (reportedly retired in 1947). The site is currently used as an engine parking area and staining was observed along the tracks located on the northern portion of the site.

Thirteen borings were drilled in September 1997. Borings B-1 through B-7 were sampled for soil only. Borings B-8 through B-11 were sampled for both soil and groundwater. Borings B-12 and B-13 were sampled for groundwater only. Four soil samples were collected from each boring with the upper two and the lower two samples mixed into composite samples (see attached Table 1 for analytical results). Five additional borings were drilled in December 1997 (B-8A, B-8B, B-10A, B-10B, and B-10C) and sampled for soil only.

The site is generally underlain by 4 to 9 feet of silty sand, which is underlain by clay and sandy clay to 19 feet bgs, the maximum depths of the borings.

Soil sampling results indicate that TPH-d was not detected, TPH-mo (motor oil) was detected at a maximum concentration of 150 mg/kg, that only one PNA was detected [indeno (1,2,3-cd) pyrene at 0.078 mg/kg, which is two orders of magnitude less than its PRG), and that the metals detected were all within background concentrations. Groundwater samples were all below detection limit for TPH-d and BTEX.

Closure for this site is appropriate based on the analytical results that indicate that the site has not been significantly impacted and does not pose a threat to human health and the environment.

**KEY SITE MANAGER
QUESTIONNAIRE**

Environmental Site Assessment Key Site Manager Questionnaire

To the best of your knowledge, do any of the following documents or situations exist, or have you been made aware of them in the past (*add brief explanation and/or circle or underline as necessary*):

- Yes / No ___ / Unkwn ___ (1) Past Environmental Assessments - Phase I, Phase II, etc.?
- Yes / No ___ / Unkwn ___ (2) Environmental Regulatory Permits (wastewater, hazardous materials, etc.)?
- Yes / No ___ / Unkwn ___ (3) Currently existing or former (removed/abandoned) underground storage tanks at the Property?
- Yes / No ___ / Unkwn ___ (4) Has the Property been used for an industrial use now or in the past?
- Yes ___ / No / Unkwn ___ (5) Has the Property, either currently or in the past, been used as a gasoline station, motor repair facility, commercial printing facility, dry-cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility? *Rail Yard*
- Yes ___ / No ___ / Unkwn (6) Has any Neighboring (Adjoining) Property, either currently or in the past, been used as for industrial purposes, a gasoline station, motor repair facility, commercial printing facility, dry-cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?
- Yes ___ / No / Unkwn ___ (7) Are there currently, or to the best of your knowledge have there been previously, any automotive or industrial batteries in significant quantities, or pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Property or within the facility?
- Yes ___ / No ___ / Unkwn (8) Has Fill Dirt been brought onto the Property which originated from a contaminated site or which is of an unknown origin?
- Yes ___ / No / Unkwn ___ (9) Are there currently, or to the best of your knowledge have there been previously, any Clarifiers/Interceptors, Pits, Ponds, Surface Impoundments or Lagoons located on the Property in connection with waste treatment or waste disposal?
- Yes ___ / No / Unkwn ___ (10) Are there currently, or to the best of your knowledge have there been previously, any Incinerators, Injection Wells, Transfer Stations, Waste Recycling, Waste Treatment, or Land Disposal Areas located on the Property in connection with waste treatment or waste disposal?
- Yes ___ / No / Unkwn ___ (11) Is there currently, or to the best of your knowledge has there been previously, any petroleum product or chemical spills or stained soil on the Property?

- Yes ___ / No / Unkwn ___ (12) Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered aboveground or underground storage tanks located on the Property?
- Yes ___ / No / Unkwn ___ (13) Is the Property served by a private well or non-public water system, or does the Property utilize a septic system?
- Yes ___ / No / Unkwn ___ (14) Does the Owner or Occupant of the Property have any knowledge of Environmental Cleanup Liens, Deed Restrictions, Use Restrictions, Institutional Controls, Activity and Use Limitations or any other government notification or restriction relating to past or current violations of environmental laws (or contamination) with respect to the Property or Property facility?
- Yes ___ / No / Unkwn ___ (15) Does the Owner or Occupant of the Property have any knowledge of any Environmental Site Assessment of the Property or facility that indicated the presence of Hazardous Substances, chemicals or Petroleum Products on, or contamination of, the Property or recommended further assessment of the Property?
- Yes ___ / No / Unkwn ___ (16) Do the Property Owner, Buyer or their agent(s) (as applicable) have any information/knowledge that the Property is being sold, transferred, valued or refinanced at a reduced price due to current, past or suspected environmental issues either at the Property or an Adjoining Property?
- Yes ___ / No / Unkwn ___ (17) Does the Property discharge wastewater or process water (other than storm water), directly to a ditch or stream on or adjoining the Property?
- Yes ___ / No ___ / Unkwn (18) To the best of your knowledge, have any Hazardous Substances, chemicals or Petroleum Products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried, or burned on the Property?
- Yes ___ / No ___ / Unkwn (19) Are there currently, or to the best of your knowledge, has the Owner or Operator of the Property been required previously to submit or file to any agency a Chemical Contingency Plan, Emergency and Hazardous Chemical Inventory Form, Toxic Chemical Release Form, SARA Title III - Emergency Planning and Community Right-to-Know Act inventory, SARA Title III - Extremely Hazardous Substances inventory, or report under the Emergency Response Notification System?
- Yes ___ / No / Unkwn ___ (20) Are there currently, or to the best of your knowledge, has the Owner or Operator of the Property been required previously to submit, file, or maintain Material Safety Data Sheets (MSDS) or a written Hazard Communication Program?
- Yes ___ / No / Unkwn ___ (21) Based on your knowledge and experience related to the property (or similar properties or usages), are you aware of any obvious indicators of, or likely presence of, current or past spills or releases at the Property?

Yes ___ / No X / Unkwn ___

(22) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Site History:

Year property was developed with current building(s): _____

Year present owner acquired the property (if applicable): _____

Main business(es) or tenant(s) prior to existing ones (if any):
vacant land - old rail yard

Historical use of land before existing development: old rail yard

Name of Service Provider: N/A Vacant land

Natural Gas: _____

Electricity: _____

Water: _____

Sewer: _____

Propane: _____

Fuel Oil: _____

Waste Disposal/Recycling: _____

Approximate Square Footage of Structure(s): _____

Adjoining Properties:

North : _____

East: _____

South: _____

West: _____

Any Hazardous Materials (Chemical) Usage and/or Hazardous Waste Generation? If so, please specify types of materials, quantities, how stored, disposal contractor, etc.

SECTION I. **INTRODUCTION**

Lomas Partners (Client) retained Pinnacle Environmental, Inc. (PEI), to perform a Subsurface Phase II Environmental Site Assessment at 315 D Street, Petaluma, California (subject property). This investigation followed PEI's Phase I Environmental Site Assessment (ESA) for the subject property issued on April 26, 2016. That ESA report discusses prior subsurface assessment activities completed at the subject property by Geomatrix in 1994, 1996, and 1997 on behalf of Union Pacific Railroad, the prior owner of the property. Excerpts of the Geomatrix assessments are included in the appendix of the April 26, 2016 Phase I ESA. The following paragraphs describe evidence of ASTM Recognized Environmental Conditions (RECs) or other issues related to this investigation identified in that report (directly excerpted):

From the historical information review performed, PEI concludes that the subject property was used as a rail yard since at least 1888 (reportedly back to 1870). The property historically has contained multiple railroad spurs and right-of-way tracks, as well as structures including an engine house (round house), water tanks, turntables (two), tool houses (two), an oil house, and cattle yard (corrals). The structures were reportedly retired in 1947, but railroad spurs/tracks are evident in aerial photography from that time through more current aerial photographs. No data was found to indicate fueling facilities (including ASTs or USTs) were historically located at the subject property.

Previous subsurface assessments at the subject property included the drilling of 18 borings in September and December 1997 in areas previously identified as areas of potential concern. The investigation included 13 borings advanced in September 1997 and 5 follow-up borings advanced in December 1997. The field work was completed by a contractor (Geomatrix) on behalf of Union Pacific Railroad (UPRR). Low concentrations of petroleum hydrocarbons (as diesel and motor oil) were detected in shallow soil at the site. One shallow soil sample contained 1,2,3-cd pyrene at concentrations below regulatory action levels. Metals concentrations were reportedly within background concentrations. Groundwater was reportedly not significantly impacted by petroleum hydrocarbons, BTEX, or related constituents. The data was presented to the San Francisco Regional Water Quality Control Board (SFRWQCB) for review which resulted in the property address 348 E. Washington being listed as a SLIC site under the name Northwestern Pacific Railroad. The SFRWQCB issued a "Case Closure" letter on February 20, 1998 which stated "no further investigation or remediation at the site will be required by this Regional Board".

Based on PEI's review of the prior assessment, PEI concurs that results from prior investigations indicated only minor (de minimis) impact from petroleum hydrocarbon compounds and metals. However, PEI understands there are current plans to develop the subject property as a commercial-residential complex. For such a development, PEI recommended additional due diligence assessment at the subject

property to further evaluate the current conditions as it may relate to the planned development.

Based upon the above information, the purpose of this subsurface assessment was to evaluate the subsurface at a limited number of accessible areas of the property to assess potential environmental impact from historical on-site operations relative to potential future residential development of the property. Since only a limited number of borings were advanced, the laboratory analysis was limited to the constituents analyzed, and the boring depths also limited, it is possible that localized areas of environmental impact and/or impact from other constituents may have been missed.

The proposed scope of work included the installation of eight (8) soil borings to approximately 20 feet below ground surface (bgs) to collect soil and groundwater samples. Six (6) additional borings were completed to a depth of approximately 5 feet bgs. Selected soil and groundwater samples were analyzed for the following constituents: volatile organic compounds (VOCs) by EPA Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method 8270D, Total Petroleum Hydrocarbons differentiated by carbon chain (TPHcc) by EPA Method 8015B; CAM 17 metals by EPA Method 6010, organochlorine pesticides (OCPs) by EPA Method 8081B, organophosphorus pesticides (OPPs) by EPA Method 8141B, and organochlorine herbicides (OCHs) by EPA Method 8151.

The proposed boring locations at the subject property were marked on June 9, 2016, for notification of Underground Services Alert (USA). In addition, PEI subcontracted a geophysical survey firm to clear potential drilling locations of subsurface utilities. The field work was conducted on June 14 and 15, 2016.

SECTION II.

SCOPE OF WORK & LIMITATIONS

A. PURPOSE

The purpose of this subsurface assessment was to evaluate the subsurface soil and groundwater in limited accessible areas of the property to assess potential environmental impact from historical on-site operations relative to potential future residential development of the property. Groundwater in the vicinity of the subject property was estimated at approximately 13 to 16 feet below ground surface (bgs) based upon data from prior environmental assessments at the subject property. The scope of work was based solely upon the Phase I report findings.

This screening investigation is not intended to define the extent of potentially impacted soil gas (if any) at the subject property, but rather is intended to discover area(s) of impact by the above-mentioned constituents in limited accessible locations at the subject property. The report is not necessarily intended to satisfy regulatory agency requirements, or be used for official "closure" purposes. Significant additional scope requirements, regulatory involvement, cost and turnaround time are necessary to achieve such a purpose. Nor is the investigation or recommendations meant to provide legal or regulatory advice or interpretation.

B. SCOPE OF WORK

Based on information available to PEI, the following scope of work was proposed on April 27, 2016:

1. Dig Alert, Permits & Coordination - Preparation of Health and Safety Plan and Notification of Underground Service Alert (USA). PEI would also secure drilling permits for the advancement of the soil and groundwater borings.
2. Soil & Groundwater Sampling
Fourteen soil borings were proposed for the property. Eight (8) borings were to be drilled to a depth of approximately 20 feet bgs or to just below first groundwater at various locations within the subject property in order to obtain representative groundwater samples. The eight (8) borings would be converted to temporary groundwater monitoring wells for collection of groundwater samples. Soil samples would be obtained from each of the borings at shallow (e.g., 1-2 feet) and deeper (e.g., 5 feet) depths in each of the borings during drilling of the borings with one (1) soil sample selected for analysis from each boring. In addition, six (6) shallow soil borings were proposed. Soil and groundwater samples were to be sent to a fixed-base certified laboratory for analyses.
3. Laboratory analyses - of up to fourteen (14) soil samples (1 per boring) and eight (8) groundwater samples (one per well).
4. Report preparation

C. LIMITATIONS

The Limited Phase II findings are based on the conditions existing at the site on June 14 and 15, 2016, when the geophysical survey and field sampling were conducted. This work was performed in general accordance with the April 27, 2015 proposal that was approved by the Client on May 18, 2016. This Assessment has been conducted and prepared in accordance with generally accepted practices and procedures exercised by reputable professionals under similar circumstances. PEI makes no other warranties or guarantees, either expressed or implied, as to the findings, opinions, or recommendations contained in this report.

This Limited Phase II was not fully comprehensive in nature but was restricted to areas discussed herein. The findings presented in this report were based on the subsurface conditions encountered in the areas investigated during the time frame of this assessment. These findings may not be considered representative of future conditions in the areas investigated or conditions in any untested areas of the site.

It should be recognized that this study was not intended to be a definitive investigation of potential impact at the subject property. Given that the Scope of Services for this investigation was limited and that the investigation was further limited by the lack of accessibility in some areas, it is possible that currently unrecognized impacts (or higher levels than those found) may exist at the site. Therefore, PEI cannot act as insurers and cannot “certify” that a site is free of environmental contamination, that impact does not exist below a certain level in other areas of the site, or that some other, currently unrecognized, environmental impact does not exist at the site.

The recommendations provided in this report do not constitute legal advice and should not be relied upon in any way for legal interpretations. This report has been prepared for the sole use of the Client, affiliates, and assigns of the Client. This report may not be relied upon by any other party without the written authorization of PEI and the Client. The Scope of Services performed in the execution of this investigation may not be appropriate to satisfy the needs of other private users or public agencies, and any re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user. This report is not necessarily designed to be used for regulatory review or closure purposes, but simply to facilitate a real estate transaction or review.

SECTION III.
GENERAL SITE DESCRIPTION

This section provides a brief description of the site, the physical setting of the site and vicinity, and a summary of previous environmental investigations.

A. DESCRIPTION OF SITE AND VICINITY

The subject property area at 315 D Street is approximately a 4.48-acre vacant parcel of land that is currently used as a contractor’s storage yard. The subject property is located on the northeast side of Copeland Street, between Washington and East D Street, southwest of Lakeville Street, within a generally commercial area of Petaluma.

Specifically, the subject property is bordered by the following:

Northwest	Immediately by East Washington Street, then by a commercial retail shopping center (355 – 361 East Washington Street). Closest tenants include Wheel Works/O’Reilly Auto Parts, and CVS.
North	Immediately by the intersection of East Washington Street and Lakeville Street, then by a commercial-use property (Craftsman Floor Coverings at 401 East Washington Street)
Northeast	Immediately abutting by three structures occupied by the Petaluma Visitors Center, Petaluma Arts Center and a restroom, then by a railroad right-of-way, then by Lakeville Street. On the north side of Lakeville Street are various commercial-use properties (north to south) including Taco Bell (406 East Washington St), Traxx Bar and Grill (219 Lakeville Street), and an older retail shopping center/warehouse (Burdell Building at 405 East E Street).
East	Immediately by the intersection of Lakeville Street and East D Street, then by a commercial-use property (Wilibeas Wines & Spirits at 309 Lakeville Street)
Southeast	Immediately by East D Street, then mainly by undeveloped land except for a commercial-use property near the southern corner (Lind Marine at 300 East D Street). Two railroad tracks transect the southeastern parcel and D Street and enter (and terminate) on the subject property.
South	Immediately by the intersection of Copeland Street and East D Street, then by an industrial-use property to the east, a bridge directly south and additional industrial-use properties to the west.
Southwest	Immediately by Copeland Street, then by mainly undeveloped land with two warehouse structures (neither building has an exterior address).
West	Immediately by the intersection of East Washington Street and Copeland Street, then by industrial-use properties to the northwest and west with commercial-use properties to the southwest (Grocery Outlet at 80 East Washington Street)

The site location and local topography are illustrated on **Figure 1**, adapted from the USGS 7.5-minute Petaluma, California, Quadrangle Map. An aerial photograph of the subject property and surroundings is provided as **Figure 2**.

B. PHYSIOGRAPHIC AND TOPOGRAPHIC CONDITIONS

The subject property's physical setting was researched employing a United States Geological Survey (USGS) 7.5-Minute Topographic Quadrangle (Quad) Map relevant to the subject property. The USGS 7.5-Minute Quad Map has an approximate scale of 1 inch to 2,000 feet, and shows physical features such as wetlands, roadways, mines, and buildings. The USGS 7.5-Minute Quad Map was used as the Standard Physical Setting Source in the Phase I ESA, and was sufficient as a single reference. An excerpt from the map is included as Figure 1 as noted in the previous section.

The Petaluma, California, Quad Map (dated 1981) shows no mines, wells, aboveground storage tanks, or wetlands depicted in the immediate area of the subject property. The only physical features depicted on the subject property are two railroad spurs which transect the property. The elevation of the subject property is approximately 12 feet above mean sea level with a slight topographic gradient direction to the south.

SECTION IV. FIELD ACTIVITIES

A. UTILITY LOCATION

Underground Service Alert (USA aka Dig Alert) was contacted and the Dig Alert ticket #W6162004478 was issued on June 10, 2016.

PEI obtained the necessary temporary well permit from the Sonoma County Department of Health Services (SCDHS) to drill soil borings and collect groundwater samples. The permit was issued on June 3, 2016 (#SR0013597). A copy of the issued permit is included as **Appendix A** of this report.

The on-site geophysical survey completed by Ground Penetrating Radar Systems, Inc. (GPRS), which used both ground penetrating radar (GPR) and electromagnetic (EM) equipment. The field work was completed by GPRS on June 14, 2016. GPRS cleared each of the proposed boring locations of potential subsurface utilities. No significant radar or magnetic anomalies were found.

B. HEALTH AND SAFETY PLAN

A site-specific Health and Safety Plan (HASP), compliant with the requirements of 29 CFR Part 1910.120, 8 CCR 5192, and the EPA Standard Operating Safety Guides for Hazardous Waste Operations (1986) was developed for PEI personnel prior to field activities. Based on the conditions of the site, the expected levels of constituents present in the soil, and the type of work performed, all activities were conducted in Level D Personal Protective Equipment (PPE). The HASP provided the requisite details and guidance for PEI personnel.

C. DRILLING AND CHEMICAL ANALYTICAL METHODS

PEI subcontracted the drilling services of Environmental Control Associates (ECA), for the June 14 and 15, 2016, field work to obtain soil and groundwater samples at the subject property, using a GeoProbe® 6600 truck-mounted drilling rig. The borings were located in the prescribed locations noted on **Figure 3** and cleared by GPRS.

Boring locations were selected to provide additional subsurface information for the subject property based on a review of: 1) previous subsurface assessments at the property, 2) previous historical operations at the property, and 3) general proposed development at the property. The field work was accomplished in two field days.

In addition to the proposed borings, PEI requested and received Client authorization to collect and analyze two soil samples from an approximately 6-foot soil pile located at the southwest corner of the property. Soil samples from that pile were collected at approximately 12 inches below ground surface at two locations (north & south) at that soil pile. The samples were analyzed for TPHcc, CAM 17 metals, and SVOCs.

During the sampling at location PS-6, PEI observed stained soil conditions with a noticeable heavy hydrocarbon-like odor at approximately 8 feet bgs. The soil sample also contained wood fragments, which may have indicated a possible historical subsurface structure in the area of this boring. PEI received authorization from the Client to collect a groundwater sample from Boring PS-6 for laboratory analysis.

Soil samples from each boring were collected in 4-foot--long by 2-inch- or 1.5-inch-diameter clear acetate sleeves cut from 4-foot-long sampling sleeves (direct-push samples). The soil samples were sealed with Teflon™ sheets, capped, labeled and placed in a cooler maintained at approximately 4°C with ice. Soil samples were shipped via overnight courier to a California-certified fixed-base laboratory (Enviro-Chem Laboratories in Pomona, CA) for analysis utilizing chain-of-custody protocols.

Selected soil samples collected from shallow soil borings PS-1 through PS-6 were analyzed for the following constituents: VOCs by EPA Method 8260B, SVOCs by EPA Method 8270D, TPHcc by EPA Method 8015B; CAM 17 metals by EPA Method 6010, OCPs by EPA Method 8081B, OPPs by EPA Method 8141B, and OCHs by EPA Method 8151. Soil and groundwater samples from groundwater collection borings PW-1 through PW-8, as well as groundwater collected from PS-6 were analyzed for VOCs, SVOCs, and TPHcc by the EPA Methods listed above. Chain-of-custody records are contained, together with the laboratory analytical reports, in **Appendix B**.

All soil borings were backfilled with neat Portland cement to ground surface after the temporary groundwater wells were removed.

D. ENCOUNTERED SOIL CONDITIONS AND OBSERVATIONS

Soils encountered in during this assessment can generally be described as predominantly silty and clayey, with varying percentages (less than 15% to about 30%) of fine to coarse-grained sand and fine gravel. Thin lenses (approximately 1 to 2 feet thick) of silty and clayey sands and fine gravels were noted at various depths between approximately 10 to 24 feet in most of the nine borings completed for groundwater collection. Groundwater was present in most of the coarser grained lenses; however, groundwater was slow to enter temporary casings set into the borings in approximately half of the borings advanced for groundwater collection. Depth to “static” groundwater in the borings generally ranged from approximately 10 to 12 feet bgs.

No stained soils were noted in any of the soil borings except PS-2, PS-3, and PS-6. Dark gray stained and slightly oily clay with some wood fragments was noted from approximately 8 to 10 feet bgs in boring PS-6. This lens of stained soil exhibited a hydrocarbon-type odor, and PID scanning of the soil indicated up to 3.8 parts per million by volume (ppmV) of volatile compounds. This was the only boring where PID monitoring detected any volatiles greater than 0.0 ppmV. The noted hydrocarbon-type odor faded and changed to a more “swampy” type of odor by approximately 12 feet bgs, and exhibited features typical of regional Bay Mud formation conditions.

Shallow boring PS-2 was advanced within a noticeable surface stain within the subject property's northern railroad spur. Fine-grained sandy gravel encountered in this boring appeared slightly oily at 2 feet bgs, however exhibited no odors. The oily conditions were no longer apparent by approximately 3 feet bgs, when soil conditions graded to dark gray silty clay.

Oily conditions were also noted in gravelly sand encountered at approximately 2 feet bgs in shallow boring PS-3, also advanced within the northern railroad spur. As with PS-2, the oily soil did not exhibit any odors. The oily conditions in this boring were no longer apparent by approximately 4 feet bgs, when soil conditions graded to dark gray clayey silt.

Bay Mud formation soils were encountered in borings PW-3 and PW-4 at approximately 10 feet bgs. Bay Mud conditions were observed as very dark gray to black soft silts and clays that exhibited slightly "swampy" odors.

SECTION V. FINDINGS

This Phase II Environmental Site Assessment was performed in order to evaluate the subsurface soil and groundwater in limited accessible areas of the subject property to assess potential environmental impact from historical on-site operations relative to potential future residential development of the property. Laboratory data for this investigation are summarized below in Tables 1, 2 and 3. The findings of this assessment are summarized below.

No TPH, VOCs, or SVOCs were detected above laboratory detection limits in the groundwater samples analyzed (Table 1).

No VOCs, pesticides or herbicides were detected above laboratory detection limits in the soil samples analyzed (Tables 2 and 3).

With the exception of one soil sample (PS-1-1), no SVOCs were detected above laboratory detection limits in the soil samples analyzed (Table 2). The SVOC was detected in sample PS-1-1, which contained 0.833 milligram per kilogram (mg/kg) of pyrene. This concentration is well below the US Environmental Protection Agency (EPA) Region IX residential Regional Screening Level (RSL) for pyrene of 180 mg/kg, as well as below the San Francisco Bay Regional Water Quality Control Board (RWQCB) residential Environmental Screening Level (ESL) of 85 mg/kg.

TPH in the diesel range (C11 to C22) was detected above laboratory detection limits in three of 16 soil samples analyzed (Table 2). Two of these samples (PS-4-1 and SP1) contained very low concentrations (12.2 and 10.1 mg/kg, respectively) and can be considered de minimus. PS-6-8 contained 463 mg/kg TPHcc in the diesel range. This concentration is greater than the residential ESL of 230 mg/kg. However, this ESL is based on direct contact with people or workers, and at 8 feet bgs, the risk of “direct contact” with this soil is very low.

Ten of the CAM-17 metals were detected in soil samples collected from each of the soil and groundwater borings advanced for this investigation (Table 3). Beryllium, cadmium, molybdenum, selenium, silver, and thallium were the listed CAM-17 metals which were not detected in any of the soil samples selected for metals analysis. The detected metals concentrations were compared to EPA RSLs as well as RWQCB ESLs for soil in a residential setting. Arsenic and lead were the only metals detected at concentrations greater than their respective residential screening levels, as discussed below:

- Arsenic was detected above the RSL and ESL in all of the soil samples collected during this investigation; however, typical background concentrations of arsenic in Bay Area soils generally range up to 15 mg/kg. Only soil samples PS-1-1 and PS-2-2 with arsenic detections of 607 mg/kg and 29.1 mg/kg contained concentrations of arsenic in excess of concentrations typical of Bay Area soils. Both of these samples were collected beneath the northern railroad spur on the subject property.

- Lead was detected at a concentration greater than the residential ESL of 80 mg/kg in sample PS-2-2, at a concentration of 144 mg/kg. The detected lead concentration was below the EPA's RSL of 400 mg/kg.

SECTION VI.

CONCLUSIONS AND RECOMMENDATIONS

PEI performed this Subsurface Phase II Environmental Site Assessment soil at 315 D Street, Petaluma, California in order to evaluate subsurface soil and groundwater conditions at a limited number of accessible areas of the subject property. PEI's conclusions regarding the subject property based on the findings of the investigation presented above are as follows:

- Based on the results of the nine groundwater grab samples collected across the site, groundwater beneath the subject property is not currently impacted by TPH, VOCs, or SVOCs.
- Aside from the sampling locations discussed below, soil analytical results indicate that the site has not been significantly impacted by past use of TPH, VOCs, SVOCs, pesticides, herbicides, or metals.
- Chemical analysis of shallow soils beneath the northernmost railroad spur on the subject property have shown elevated concentrations of lead and arsenic greater than typical background concentrations and/or greater than RWQCB ESLs for soils in a residential setting.
- Aside from the three arsenic and lead detections at sampling locations PS-1-1 and PS-2-2, near surface soils do not appear to have been significantly impacted by prior uses of the subject property.
- Physical observations and analytical results of soil collected at PS-6, located near the southern property boundary, indicate that residual diesel contamination remains in the vicinity of this sampling location at a depth of approximately 8 to 10 feet bgs.

PEI's recommendations regarding the above conclusions from this investigation are presented below. These recommendations are based on the results of the collected data and are made relative to acquisition of the subject property for redevelopment to residential purposes:

- It is PEI's understanding that the current site owner, the Sonoma Marin Area Rail Transit agency (SMART), will be removing the railroad spurs and associated railroad ties and slag (gravel) prior to selling the property to the Client. The total depth of slag and soil removal should be confirmed with SMART in order to evaluate whether the elevated arsenic and lead concentrations detected during this investigation remain following spur and slag removal. In addition, PEI recommends that the areas where elevated arsenic and lead were detected should be resampled following railroad spur and slag removal activities, to confirm that residual metals concentrations do not exceed residential screening levels.
- Based on the history of the subject property as well as the relatively minor (de-minimus) concentrations of TPH and metals detected in soils at the site, there remains

a possibility that additionally impacted soil may be encountered during site grading and redevelopment activities. In the event that future excavation is contemplated, appropriate measures, in accordance with applicable regulation, should be taken to manage soils that may contain residual levels of potential contaminants that could be present in soils on the property. Performance of soil testing and/or development of a formal Soil Management Plan for any property redevelopment may be appropriate, to address soil stockpiling and soil profiling to ensure proper soil re-use, disposal and implementation of worker safety measures.

- Some of the metals detections were at concentrations that may require additional leachate analysis for waste characterization purposes, should the soil from the subject property be removed during site redevelopment activities. None of the detected metals concentrations exceeded their respective Total Threshold Limit Concentrations (TTLC); however, some of the detected concentrations of arsenic, chromium, and lead were in excess of five times their respective Soluble Limit Threshold Concentration (STLC) values, which would require that the STLC leachate extraction test be performed on these soil samples. Again, this would be necessary only should soil in the vicinity of the elevated detections be removed from the subject property.

SECTION VIII.
STATEMENT OF THE ENVIRONMENTAL PROFESSIONALS

This Assessment has been performed for the exclusive use and benefit of the addressee(s) identified on the cover of this report, or agents directly specified by it (them), for the transaction at issue concerning the subject property described in this report. This Assessment shall not be used or relied upon by others without the prior written consent of Pinnacle Environmental, Inc. and of the addressee(s) named on the cover of this report.

The objective of this limited subsurface investigation was to discover potential environmental impact from historical usage of the subject property to subsurface soils, as specified in the scope of services, with the limitations identified in the proposal. The field and laboratory procedures described herein were conducted in accordance with generally accepted environmental consulting practices in order to accomplish the stated objectives.

MEMORANDUM

Date: 30 April 2020

Job No.: 20302-00.02699

To: Geoff Reilly, WRA

From: Cem Atabek and Bruce Abelli-Amen, PG, CHg

Subject: **Technical Review of Environmental Site Assessments, SMART Parcel, 315 D Street, Petaluma, California.**

Baseline has performed a technical review of the Phase I Environmental Site Assessment (ESA), dated 21 April 2016, and the Subsurface Phase II ESA, dated 26 July 2016, for the property located at 315 D Street in Petaluma, California (project site), prepared by Pinnacle Environmental. Baseline's scope of work also included reviewing the latest information from the State Water Resources Control Board's (State Water Board's) *GeoTracker* database and Department of Toxic Substances Control's (DTSC's) *EnviroStor* database to evaluate whether off-site hazardous materials release sites could potentially affect the project site; reviewing aerial imagery of the project site available on Google Earth for the period between 2016 and the present; and performing a reconnaissance of the project site to observe and document current conditions. The purpose of Baseline's scope of work is to: 1) evaluate whether changes have occurred at the project site or surrounding area or new information has become available since 2016 that could impact the environmental condition of the project site; and 2) evaluate whether potential sources of hazardous materials and/or areas of potential subsurface contamination may be present at the project site which were not evaluated or identified by previous environmental investigations (i.e., data gaps and environmental concerns).

2016 Phase I ESA

The 2016 Phase I ESA included the following findings:

- The project site was historically used as a rail yard since at least 1888 with multiple rail tracks/spurs and train maintenance facilities.
- Previous subsurface investigations performed at the project site in 1996 and 1997 identified low concentrations of petroleum hydrocarbons (diesel and motor oil) in shallow soil.
- The project site was listed as a Spills, Leaks, Investigations, and Cleanup (SLIC) site by the San Francisco Bay Regional Water Quality Control Board (Regional Water Board) with a "case closed" status as of 1998.

Memorandum – Technical Review of ESAs

30 April 2020

Page 2

The Regional Water Board's Site Closure Summary, dated 20 February 1998, was included as an attachment to the 2016 Phase I ESA and indicated that there are no site management requirements (e.g., requirements for notification of the Regional Water Board regarding changes in land use or soil excavation) for the project site. The 2016 Phase I ESA recommended that additional subsurface investigation should be performed at the project site to evaluate soils for potential hazardous constituents of concern.

2016 Phase II ESA

The 2016 Phase II ESA included the following findings:

- Groundwater beneath the project site was not impacted by total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), or semi-volatile organic compounds (SVOCs).
- Soil at the project site was not significantly impacted by TPH, VOCs, SVOCs, pesticides herbicides, or metals with the exceptions of elevated TPH as diesel (TPHd) in soil at a depth of 8 to 10 feet near the southern boundary of the project site, and elevated concentrations of arsenic and lead in soil in the vicinity of the northern most rail road spur on the project site.
- Areas where elevated arsenic and lead were detected should be resampled following removal of the railroad spurs and associated ties and slag (gravel) to confirm that residual metals concentrations do not exceed residential screening levels.
- There remains a possibility that additional subsurface contamination associated with historic rail yard uses could be encountered during site grading and redevelopment activities.

The 2016 Phase II ESA recommended that additional soil testing and/or development of a Soil Management Plan may be appropriate for redevelopment of the project site to address soil stockpiling and soil profiling to ensure proper soil re-use, disposal, and implementation of worker safety measures.

Review of GeoTracker and Envirostor Databases

On 19 February 2020, Baseline reviewed the State Water Board's *GeoTracker* database (available at <https://geotracker.waterboards.ca.gov/>) and DTSC's *EnviroStor* database (available at <https://www.envirostor.dtsc.ca.gov/public/>). Baseline's review of these databases focused on hazardous materials release sites located within 1,000 feet of the project site which are currently open cases or received closure after April 2016 (when the 2016 Phase I ESA was prepared for the project site). Based on the information available on *GeoTracker* and *EnviroStor*, including the nature of hazardous materials releases near the

Memorandum – Technical Review of ESAs

30 April 2020

Page 3

project site, proximity to the project site, and the groundwater flow direction observed at the hazardous materials release sites, Baseline did not identify off-site hazardous materials releases that may have impacted the project site.

Review of Google Earth Aerial Imagery

Baseline reviewed aerial imagery of the project site available on Google Earth for the period between 2016 and the present. A summary of observations is presented below and copies of select aerial images are included in Attachment A.

July 2016: The project site was used as a construction staging yard. Construction equipment, vehicles, shipping containers, stockpiles of soil and other materials, and construction materials were present at the project site.

June 2017: Much of the construction equipment, vehicles, and materials noted above were no longer present at the project site. Stockpiles of soil and other materials remained in the western portion of the project site, and three shipping containers remained in the central portion of the project site. The westernmost portion of the project site appears to have been recently graded.

October 2017: The westernmost portion of the project site was used for parking. No other significant changes were observed in the remainder of the project site.

September 2018: Only one shipping container remained in the central portion of the project site, and two pieces of rail mounted heavy equipment were present on the rail spur in the central-eastern portion of the project site. No other significant changes were observed in the remainder of the project site.

August 2019: The rail mounted heavy equipment were no longer present on the rail spur in the central-eastern portion of the project site. No other significant changes were observed in the remainder of the project site.

Based on the review of aerial images discussed above, the project site appears to have been used primarily for construction staging and parking for the period between 2016 and the present. The construction staging activities are presumed to be related to construction of the Sonoma-Marine Area Rail Transit (SMART) passenger rail system. The source and quality of the stockpiles of soil and other materials at the project site is not known, therefore these stockpiles could potentially be contaminated, particularly if the source of the materials was areas of previously existing railroad tracks, as areas along railroad tracks are commonly contaminated with heavy metals (e.g., arsenic and lead), pesticides, herbicides, petroleum hydrocarbons, and polycyclic aromatic hydrocarbons (PAHs). The use of the project site as a

Memorandum – Technical Review of ESAs

30 April 2020

Page 4

construction staging yard may have involved the storage and use of construction related hazardous materials (e.g., fuels, oils, paints), and maintenance of heavy equipment. Accidental releases of these hazardous materials during the construction staging uses could have impacted the environmental condition of the project site.

Site Reconnaissance

On 20 February 2020, Baseline performed a reconnaissance of the project site to document current conditions. Photographs from the site reconnaissance are included in Attachment B. Baseline observed the northwestern portion of the project site to be occupied by a gravel paved parking lot and billboard sign. The remainder of the project site was fenced in and Baseline observed and photographed site conditions from outside of the fence line. Railroad spurs were observed near the northeast boundary of the project site and in the central-eastern portion of the project site. A storm drain, a pile of scrap metal, and a large pile of treated wood railroad ties were observed along the southwestern boundary of the project site. Stockpiles of concrete and asphalt rubble, construction debris, gravel, and soil were observed in the northwestern portion of the fenced in area. Construction materials including concrete railroad ties, pipes, and many 5-gallon buckets and smaller containers of unidentified substances were observed to be stored along the northwestern boundary of the fenced in area. Staining was observed on a wooden pallet where several 5-gallon buckets were stored, however obvious staining was not noted on the surrounding ground surface soils. A 55-gallon drum which appeared to have rusted out holes was observed along the northwestern boundary of the fenced in area. A shipping container and construction materials (e.g., steel railroad track, pipes, wood, and precast concrete blocks) were observed near the center of the fenced in area. A few paint cans were observed along the northeastern boundary of the fenced in area. A railroad cart with a hydraulic motor and bucket of hydraulic oil was observed near the eastern corner of the project site. Treated wood poles/railroad ties, concrete blocks, and a stockpile of soil and gravel was observed near the southern corner of the project site.

Data Gaps and Environmental Concerns

Based on the information presented in the 2016 ESAs and other information discussed above, Baseline has determined that the following data gaps and environmental concerns at the project site warrant further investigation.

1. The 2016 Phase I ESA indicated that no data was found to indicate that fueling facilities (above ground storage tanks [ASTs] or underground storage tanks [USTs]) were historically located at the project site; however, excerpts from a 1994 Preliminary Site Assessment (PSA) that was included in an appendix to the 2016

Memorandum – Technical Review of ESAs

30 April 2020

Page 5

- Phase I ESA indicated that the project site may have served as a fuel and water station, and three empty storage tanks (ranging in size from 500 to 5,000 gallons) and associated surface soil staining were observed in the eastern portion of the project site. The 2016 Phase I ESA did not provide further information regarding the nature or previous use of three empty storage tanks (e.g., whether the tanks were ASTs or USTs that had been removed from the ground, and what the tanks had contained).
2. Excerpts from the 1996 and 1997 subsurface investigations (previous phase II assessments) were included in an appendix to the 2016 Phase I ESA. The 1996 subsurface investigation involved sampling within the existing Petaluma SMART Station property adjacent to the northeast of the project site, and did not involve sampling within the project site. The majority of soil samples collected during the 1997 subsurface investigations were composited (i.e., multiple soil samples were combined into one sample prior to laboratory testing) and did not characterize surface soil (above the depth of 1.5 feet). During the 1997 investigation, soil samples collected from depths of 1.5 feet and 3.5 or 4.5 feet below ground surface (bgs) were composited prior to analysis. During the 2016 Phase II ESA, shallow soil samples were collected from depths of 1 to 2 feet bgs. Contamination in railroad yards is often most significant in surface soil (in the upper 1 foot of soil) as the application of herbicides/pesticides, use of railroad ballast (gravel) that may contain heavy metals (e.g., slag), and accidental spills/aboveground releases of hazardous materials impacts the quality of surface/shallow soil more than deeper soils. The compositing of samples prior to analysis during the 1997 investigation and the lack of surface soil sampling during previous investigations may have resulted in analytical results that are not representative of surface/shallow soil conditions on the project site.
 3. The 1997 subsurface investigation indicated that concentrations of arsenic detected at the site were below the background concentration published by the Lawrence Berkeley National Laboratory (LBNL) in 1995; however, the 1997 subsurface investigation indicates that the LBNL background concentration for arsenic of 19 milligram per kilogram (mg/kg) is based on samples from the East Bay Hills. Concentrations of arsenic exceeding the currently accepted background threshold value for arsenic in Bay Area soils of 11 mg/kg¹ were detected in soil samples from two borings that were advanced near the existing railroad spurs on the project site during the 1997 subsurface investigation. Elevated levels of arsenic (ranging from 11 to from 15 mg/kg) were also detected in some of the step-out shallow soil samples collected from 0.5 and 2 feet bgs near one of the borings where elevated arsenic

¹ Dylan Duverge, 2011. Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region, December.

Memorandum – Technical Review of ESAs

30 April 2020

Page 6

- was originally detected. The extent of soils containing arsenic above accepted background concentrations was not adequately determined. Elevated levels of arsenic were also detected in shallow soil samples collected during the 2016 Phase II ESA as described under items 5 and 6 below.
4. The 2016 Phase II ESA indicated that pyrene was detected at a concentration of 0.833 mg/kg in one soil sample (PS-1-1), and that no other concentrations of SVOCs were detected; however, review of the laboratory reports in the 2016 Phase II ESA revealed that pyrene was not actually detected, and that concentrations of the SVOC phenol were detected in samples PS-1-1 (0.833 mg/kg) and PS-4-1 (2.3 mg/kg). These detected concentrations of phenol exceed the Regional Water Board's Environmental Screening Level (ESL)² for leaching to groundwater which is a drinking water resource of 0.16 mg/kg. The extent of soils containing phenol above applicable screening levels has not been adequately determined.
 5. The 2016 Phase II ESA indicated that none of the detected metals concentrations exceeded their respective Total Threshold Limit Concentrations (TTLCs – the threshold for determining if a material is a hazardous waste); however, arsenic was detected at a concentration of 607 mg/kg in sample PS-1-1 (collected near the northern corner of the project site from the area of existing railroad spurs) which exceeds the TTLC of 500 mg/kg; therefore, soil represented by sample PS-1-1 would be characterized as hazardous waste for disposal purposes. The extent of soils that could be characterized as hazardous waste has not been adequately determined.
 6. The 2016 Phase II ESA indicated that elevated concentration of arsenic (29.1 mg/kg) and lead (144 mg/kg) were detected in soil sample PS-2-2 which was collected from a depth of 2 feet in the area of existing railroad spurs near the northeast property boundary. Lower concentrations of arsenic and lead were detected in soil sample PS-3-2 which was also collected from a depth of 2 feet in the area of the same railroad spurs. Slag was noted in the railroad gravel at the ground surface of borings PS-1 through PS-3 (which were all located along the same railroad spurs), therefore higher concentrations of metals may be present in surface/shallow soil in the vicinity of these existing railroad spurs than was characterized by samples PS-2-2 and PS-3-2. The extent of soils containing elevated levels of metals (arsenic and lead) has not been adequately defined.
 7. The 2016 Phase II ESA indicated that slag was present in railroad gravel on the ground surface in borings PW-4 (located in the vicinity of former railroad spurs in the north-central portion of the project site) and PS-4 (located near the center of the site in the vicinity of an existing railroad spur). The shallow soil sample from boring PW-4 was not analyzed for metals and the soil sample collected from 1-foot bgs in

² San Francisco Bay Regional Water Quality Control Board, 2019. Environmental Screening Levels, January (Rev. 1).

Memorandum – Technical Review of ESAs

30 April 2020

Page 7

- boring PS-1 was collected from below the layer of gravel with slag, therefore elevated concentrations of metals may be present in the gravel layer near these borings which was not adequately characterized.
8. The 2016 Phase II ESA indicated that soil sample PS-2-2 was described as an “oily sample” by the field crew on the sampling log; however, no concentration of TPH or SVOCs were detected in this soil sample, and no explanation was provided for the discrepancy between the sampling documentation and laboratory results.
 9. A slightly elevated concentration of arsenic (11.5 mg/kg) was detected in one soil sample (SP-1) collected from a stockpile of soil that was previously located near the southern corner of the project site during the 2016 Phase II ESA. As discussed under the *Site Reconnaissance* section above, a stockpile of soil and gravel is still located near the southern corner of the project site; however, it is not known whether this is the same stockpile that was tested during the 2016 Phase II ESA. Current information regarding the chemical quality of the on-site stockpiles does not appear to be available; this is a data gap.
 10. The 2016 Phase II ESA indicated that an elevated concentration of TPHd (463 mg/kg) was detected in soil sample PS-6-8, collected near the southern boundary of the project site, and that residual TPHd contamination remains in soil at a depth of 8 to 10 feet in this area. The 2016 Phase II ESA indicated that the risk of exposure to the soil impacted by TPHd is low based on the depth, however the 2016 Phase II ESA did not identify the source of impacts from TPHd or evaluate the extent of impacts. More significant impacts from TPHd could be present in the area of boring PS-6, including potential impacts in shallow soil if the source was a surface or near surface release. A groundwater sample was not collected in the area of boring PS-6; however, the project is not anticipated to include significant excavation or dewatering; therefore, potential impacts from TPHd in deeper soil or groundwater would not likely be of concern.
 11. Surface soil samples have not been collected in areas where surface staining was indicated on the project site in figures presented in the 1996 and 1997 subsurface investigations.
 12. Historic Sanborn maps and aerial photographs presented in the 2016 Phase I ESA depict several railroad spurs on the project site that are no longer visible. The former railroad spurs were located in the area between the existing railroad spurs and in the western portion of the project site. Because slag and elevated levels of arsenic and lead have been found near the existing railroad spurs, it is possible that additional areas of the project site that have not been investigated are impacted with slag and elevated levels of metals.
 13. Prior to the advent of modern hazardous waste storage and disposal practices, historic railroad maintenance facilities may have disposed of hazardous waste liquids into subsurface sumps/vaults that drained into dry wells, sanitary sewers,

Memorandum – Technical Review of ESAs

30 April 2020

Page 8

stormwater drainage systems, or directly to nearby surface waters. Sumps, vaults, and drainage systems associated with the historic railroad maintenance facilities could be buried beneath the project site and contaminated soil and groundwater could be present near such features. Previous subsurface investigations at the project site have not identified or included sampling along existing or historic drainage systems.

14. The source and quality of the stockpiled soil and other materials located in the western portion of the project site is not known and could contain contaminants.
15. Soil located beneath the pile of treated wood could be impacted by hazardous materials (e.g., petroleum hydrocarbons, SVOCs, and metals) which may have leached out of the treated wood.
16. Soil located in the vicinity of containers observed on the project site could be impacted by hazardous material if hazardous materials were spilled or leaked from the containers.

Recommendations

Based on the data gaps discussed above, additional environmental investigation and remediation of the project site is warranted. The following recommendations for additional investigation and remediation planning should be performed prior to the review of the project under the California Environmental Quality Act (CEQA) because the extent of potential remediation activities and waste classification of soil could affect the analysis of construction emissions associated with heavy equipment use and truck trips for contaminated soil removal and disposal:

- Further investigation should be performed to further characterize surficial and shallow soil throughout the site, including soil in areas of existing and former railroad spurs, soil in areas where surface staining was previously noted, and existing stockpiles of soil and other materials.
- Because elevated levels of arsenic, lead, TPHd, and phenol have been detected in soil at the project site, and there is the potential for additional impacts from hazardous materials to be identified in the subsurface of the project site, remediation of the project site should be planned to ensure that construction workers, the public, and future occupants of the project site would not be exposed to elevated levels of contaminants in soil during or after construction activities.
- Additional investigation and planning of remediation activities should be performed under the oversight of an appropriate regulatory agency (e.g., DTSC or Regional Water Board) or a 3rd party qualified Environmental Professional selected by the City to ensure that the characterization and remediation of the project site is

Memorandum – Technical Review of ESAs

30 April 2020

Page 9

performed in a manner that would ensure protection of human health and the environment.

The following recommendations should be performed during construction of the project:

- A Soil and Groundwater Management Plan (SGMP) should be prepared and implemented under the oversight of an appropriate regulatory agency or a 3rd party qualified Environmental Professional selected by the City to ensure that appropriate procedures for characterization and management of soil and groundwater are implemented on the project site during construction activities. The SGMP should include procedures for the management of subsurface historic features of environmental concern that could be present at the project site such as buried rail spurs, USTs, sumps/vaults, and drainage lines; and management of potentially contaminated deeper soil/groundwater (if encountered) during construction.
