

## FOOD SERVICE WARE ALTERNATIVES

### REUSABLE IS BEST

Single-use disposable plates, cups, and cutlery may seem economical and convenient, but replacing these items with alternatives that can be reused, recycled or composted can reduce costs, minimize waste, and attract new customers.

Reusables cost more per item to purchase than their disposable counterparts, but they are more durable and can be used thousands of times. Over time, replacing disposable with reusable tableware can drastically reduce the cost of doing business by minimizing the number of disposables purchased and the associated garbage hauling fees incurred for disposal of these items.

Use this calculator to determine your breakeven point for the cost of reusable items. The breakeven point is the number of uses required to recover your investment. As soon as you exceed the breakeven point for a particular item, you'll be saving money.

#### **Breakeven point calculator:**

**Cost of reusable (each) = \$\_\_\_\_\_ ÷ Cost of disposable item (each) = \$\_\_\_\_\_ Breakeven point = \_\_\_\_\_ uses**

Example: Reusable cup = \$1.00 each ÷ Disposable cup = \$0.05 each Breakeven point = 20 uses

## AFTER THAT YOU ARE SAVING MONEY!

## FOOD SERVICE WARE ALTERNATIVES

### FIBER COMPOSTABLE IS GREAT

Products made entirely from uncoated paper or plant fibers are accepted in the residential and commercial green container within Sonoma County as they break down easily in a commercial composting facility or in a backyard compost pile. Note that **compostable plastics are not accepted** in the green container for a variety of reasons.

Please refer to the Supplier List below to purchase uncoated paper products for your food/beverage establishment.

#### **Fiber compostable**

- Uncoated white / natural plant fiber and paper products
- Uncoated white / natural deli and parchment paper
- Paper napkins
- 100% wood, bamboo or palm leaf products
- **Biodegradable Products Institute (BPI) [www.bpiworld.org/](http://www.bpiworld.org/)** America's leading certifier of compostable products and packaging. The organization ensures independent testing and verification according to scientifically based standards.

**BPI certified fiber products are preferred.**

## FOOD SERVICE WARE ALTERNATIVES

### RECYCLABLE IS GREAT

**Recyclables** The following items should be clean and empty:

- Plastic drinking cups and containers larger than 4" in diameter
- Plastic clamshells or other to-go containers
- Aluminum trays
- PET #1\* and HDPE #2\* plastic items are preferred over PVC #3- # Other 7 plastics, as they are the most common and easiest to recycle.

\*Postconsumer recycled content products support manufacturers using recyclables collected through curbside or commercial pickup and require less virgin plastic to produce.

### NOT ACCEPTED

**Compostable plant/bio-plastic products** (Although technically biodegradable, they cannot be composted locally.)

- Coated paper food containers (If it has a shiny surface, it is likely coated.)
- Plastic utensils
- Plastic sids/dressing cups (Plastics smaller than 4" in diameter can't be recycled locally.)
- Plastic lids for cups
- Plastic bags/plastic wrap
- Polystyrene foam (Styrofoam)
- Plastic water bottles
- Plastic Straws

**If an item is not recyclable or compostable at local facilities, it must be sent to the landfill.**

Exemptions will be allowed for disposable hot beverage or soup containers, as there are no truly compostable or recyclable products available at this time.
