RE: 52-54 Fremont Rd Project  
File No. ED18-066/LLA18-005/ED20-044/EX19-010  
Parcel Nos. 012-043-11 and 012-043-12

Dear Leslie:

I am providing these comments for the 52-54 Fremont Rd Project scheduled for review by the Design Review Board on November 16, 2021. I am requesting that these comments and attached documents be added to the packet sent to the Design Review Board, in anticipation of the meeting on November 16, 2021.

I represent a large contingent of concerned neighbors and citizens who strenuously object to the removal of the grove of existing redwood trees to facilitate construction of a new single-family residence on Marquard Ave. I submit the attached list of signatures for your review, as well as the original petition document.

The list of signatures is organized into three categories. 1 - the list of all signatures we have received totaling 671 signatures, 2 - all Marin County signatures totaling 362, and 3 - the list of signatures from San Rafael residents totaling 206. As you can see, there is broad support for saving these trees and requesting the applicant develop a plan that allows for a residence to be built that does not require the destruction of this redwood grove.

The trees slated for removal are part of a 12-tree grove of redwood trees. Due to the shared root system of these trees, removing some of these trees impacts all of them. The massive root system of these trees has tremendous benefit to erosion control and slope stability. With each winter storm we have what amounts to a river that cascades down this hillside. Furthermore, with regard to the drought, mature redwoods require very little water, as compared to newly planted trees that require copious amounts of water until they are established.

While removing these trees may technically fall within the approved current Design Review Board rules, I beseech each of you to look at the bigger picture of what is the RIGHT thing to do. With all that we now know about our climate emergency, cutting down almost 100 year old trees and replacing them with new ones is not a sound responsible decision. Please do the right thing - ask the applicant to revise their design and save these trees.

I appreciate your consideration of my comments and review of the submitted documents.

Thank you,

Maren DeGraff

# SAVE OUR NEIGHBORHOOD REDWOOD GROVE

**WHAT:** A private speculative builder in San Rafael, CA, wants to cut down 9 elder Redwood trees to build one large house.

**WHERE:** Between Marquard Ave and Fremont Road (adjacent to the public stairs) in the West End of San Rafael.

**WHY:** Help us stop this non-essential felling of trees which are providing an essential ecological service during our current, raging climate emergency. Join us in valuing, protecting and preserving our environment over further development, which does nothing to address the myriad housing issues facing our city, but instead adds yet another oversized single family home on a too-small lot.

**ABOUT THE REDWOODS:** These Redwood trees are many, many decades old, estimated at over 100 years and are irreplaceable. Once cut down, their robust environmental services are gone from the neighborhood, the community, our city, and the Bay Area forever. This group of 9 trees provides prodigious ecological service, including:

- A. Stabilizing the hillside with their root structure
- B. Sequestering atmospheric carbon, including scrubbing the air of particulate matter from tailpipes and wildfires
- C. Capturing and retaining atmospheric and ground moisture
- D. Providing habitats to the many various animals and birds who live in this grove of Redwoods

These gentle giants, Coast Redwoods (*Sequoia sempervirens*) were declared the official California State Tree in 1937 because they grow taller than any tree on Earth. One of these nine Coast Redwoods can absorb as much carbon as 250 "average" trees.

**PLEASE SIGN:** Please don't allow a speculative developer to cut down these beautiful, beneficial, elder Redwood trees. Help us protect these trees and raise the visibility and value of all Redwood trees by signing our petition. Send an email with your full name and city/town to:

[savetheredwoodtrees@gmail.com](mailto:savetheredwoodtrees@gmail.com)

Thank you,

Your West End Neighbors

Design Review Board  
c/o City of San Rafael Community Development Dept.  
1400 Fifth Ave  
San Rafael, CA  
via email: [Leslie.Mendez@cityofsanrafael.org](mailto:Leslie.Mendez@cityofsanrafael.org), [Lindsay.Lara@cityofsanrafael.org](mailto:Lindsay.Lara@cityofsanrafael.org)

**RE: Revised Plans for 52-54 Fremont Rd. dated 11/20/20,**  
File No. ED18-066/LLA18-005/ED20-044/EX19-010  
Parcel Nos. 012-043-11 and 012-043-12

This project proposes changing the existing lot line from a north/south direction to an east/west direction with major reconstruction of the existing house at 54 Fremont including a new foundation and the removal of the interior stairs in order to create a separate 1,104 sq' ADU. The plans also slate 9 mature redwood trees for removal in order to accommodate a new house fronting Marquard.

Lot Line Adjustment and the Natural State Requirement:

The size of the new house on Marquard and the footprint of the existing house after substantial reconstruction will determine where the new lot line will be located because both newly reconfigured lots are required to comply with the Natural State Requirement of the Hillside Design Guidelines, per SRMC 14.12.030-C. "Natural State" is defined as all portions of the lot that remain undeveloped and undisturbed. Diveways, parking areas, structures, and patios are not included in the "Natural State".

Alicia Giudice, the current Community Development Director, stated in her letter to the applicant, dated August 31, 2017:

***"In addition, because the lots were historically developed as one development which appears to currently comply with the natural state requirement, the proposed lot line adjustment can only be approved if you can demonstrate that both lots will meet the natural state requirement."***

The first Design Review Board meeting for this project was on November 19, 2019, to review the proposed lot line adjustment and new house fronting Marquard. No upgrades for the existing house at 54 Fremont were included. No ADU was included. At that meeting the DRB commented that:

***"The Board has difficulty supporting the findings for the proposed Exceptions to both Natural State and Gross Building Square Footage; the applicant is encouraged to reduce the size of the project and/or the configuration of the LLA to eliminate the required Exceptions".***

Since this review, the applicant has reduced the size of the Marquard house and added substantial improvements to the existing house at 54 Fremont, increasing lot coverage by more than 22% (per chart on sheet AS100 of Plans dated 11/20/2020, (2899 – 2368)/2368) which reduces the Natural State.

This project is requesting an exception to the Natural State Requirement when all previous projects on this hillside have complied with all Hillside development standards, including the Natural State and parking, such as: 31 Upper Fremont, built in 1997; 75 Upper Fremont, built in 2004; 79 Upper Fremont, built in 2004; and 38 Upper Fremont, approved last year.

Alex Rockas, a homeowner and neighbor, was advised by the City that he wouldn't be able to get an Exception to the Natural State for a remodel project at his home so he reluctantly eliminated 120 sq' in order to comply. Why are two Finance LLCs, located outside of San Rafael, given preferential treatment over a homeowner and resident of San Rafael and all other developers on this hillside? Where is the equity in that?

On October 7, 2020, a DRB subcommittee reviewed this project with only 2 members, Jeff Kent and Stewart Summers<sup>1</sup>. No minutes were recorded, only file notes. The DRB subcommittee doesn't constitute a quorum and because this project is requesting an Exception to the Natural State requirement, only a quorum of the Design Review Board can recommend approval to the City Council for this project, per SRMC 14.12.040.

Exceptions to Hillside development standards must meet very specific criteria, per SRMC 14.12.040 A & B, as follows (underlining and **bolding** have been added for emphasis):

A. The project design alternative meets the stated objectives of the hillside design guidelines to **preserve** the inherent characteristics of hillside sites, **display sensitivity to the natural hillside setting** and compatibility with nearby hillside neighborhoods, and maintain a strong relationship to the natural setting; and

B. Alternative design solutions which minimize grading, **retain more of the project site in its natural state**, minimize visual impacts, **protect significant trees**, or protect natural resources result in a demonstrably superior project with **greater sensitivity to the natural setting** and compatibility with and sensitivity to nearby structures.

This project, as proposed, does not meet the criteria for approval of an Exception. It proposes to decimate an old grove of 12 Redwood trees by removing 7 of them, 2 of these being the largest ones in the grove (35 – 37" DBH), and threatening 2 more located on the downhill side of the existing house, leaving only 3, that may not survive the extensive disruption to their integrated root system. Redwood tree roots are very shallow and they thrive in groves where the roots can intertwine and even fuse together which gives them tremendous strength, forming a network of connected root systems with other trees. Coast Redwoods are one of the oldest tree species in the world and provide extensive environmental benefits.

#### ADU, Parking, and Plan Discrepancies

An ADU of 1,100+ sq' is proposed for 54 Fremont without upgrading parking. It should be noted that the City Council adopted a moratorium on October 18, 2021, which prohibits ADUs on Fremont Road. To comply with the moratorium, the ADU should be removed and drawings should be revised before further review by the DRB and a recommendation to the City Council for final approval.

The chart on sheet AS100 also states that 54 Fremont has no existing parking and that the proposed changes will include 2 covered parking spaces, 1 garage and 1 carport. *Both are incorrect!* The existing garage has always been used by permanent occupants of the house at 54 Fremont. There are no proposed upgrades to the parking for 54 Fremont and so will only include the existing single-car garage. There is no carport. Given the substantial improvements being proposed for the existing house, there should be comparable upgrades to the parking.

In addition, I have been advised by Planning that the building square footage provided on the chart on Sheet AS100 is correct and the square footage shown on the floor plans (1A-100, 101, and 102) has not been updated and is incorrect.

### Coast Redwood Tree Grove and Design Review:

There is no change to the number of redwood trees slated for removal from the previous plans, which continues to be 9 mature trees, 8 of them significant (>12" DBH) and 7 that are part of a grove of 12 redwood trees, with 2 additional redwoods being threatened by the major construction work now being proposed for the existing house, leaving only 3 trees out of the grove of 12 that are not being directly threatened by this project but may suffer indirectly from the impacts of construction and tree removal.

The Design Review Board is being asked to approve an Environmental and Design Review (EDR) Permit for this project. The "first and foremost" purpose of an EDR is to "maintain a proper balance between development and the natural environment." (SRMC 14.25.010 A.)

*REVIEW CRITERIA* for an Environmental and Design Review Permit include the following (per SRMC 14.25.050):

14.25.050-B. Consistency with Specific Plans.

#### 1) Hillside Design Guidelines Manual:

##### IV.A1. Site Design Process,

- A project should display sensitivity to the natural hillside setting
- Preserve or protect unique or special natural features of the site, such as mature trees
- Mature Trees should be retained and integrated into new hillside residential development.
- Existing trees over 12 inches (measured at 4'6" above the root crown) in trunk diameter are considered significant resources to be preserved.
- Identify significant or unique vegetation grouping which contributes to the character of the site

##### IV.A2. Preservation of Significant Trees

- "Significant Tree" shall mean any tree which is in good health and form and is more than 12 inches in diameter as measured 4'6" above the root crown is considered a "significant tree."
- Site development plans should demonstrate that a **diligent effort** (emphasis added) has been made to retain as many significant trees as possible.
- Criteria for Removal includes:
  1. The necessity to remove a significant tree in order to construct proposed improvements to prevent **extreme economic hardship** (emphasis added) to the owner of the property.
  2. The topography of the land and the effect of the significant tree removal on erosion, soil retention, and the diversion or increased flow of surface waters.

##### IV.A8. Planting Design for Hillside Residential Development

"Efforts should be made to retain existing tree groupings and specimen trees to incorporate them into new development."

#### 2) General Plan 2040:

San Rafael is designated a *TREE CITY USA* and recognizes the value of protecting, maintaining, and expanding our tree canopy. Newly adopted General Plan 2040 tree programs and policies include the protection and preservation of our trees, especially the California Redwood that was designated the official state tree of California by our state legislature in 1937.

***Policy C-1.16: Urban Forestry.***

*Protect, maintain, and expand San Rafael's tree canopy. Trees create shade, reduce energy costs, absorb runoff, support wildlife, create natural beauty, and absorb carbon, making them an essential and valued part of the city's landscape and strategy to address global climate change. Tree planting and preservation should be coordinated with programs to reduce fire hazards, reduce greenhouse gas emissions, expand solar opportunities, and ensure public safety, resulting in a community that is both green and fire-safe.*

***Program C-1.17A: Tree Preservation.***

*Revise Chapter 11.12 of the Municipal Code (Trees) or add a new Code section that defines protected and heritage trees and establishes permit requirements and procedures for tree protection, removal, and replacement. The regulations should strongly support the protection of California redwoods (*Sequoia sempervirens*) and other native trees.*

A tree management plan should be prepared to provide necessary protection and sufficient monitoring of trees during and after construction:

***Program C-1.17B: Tree Management Plan.***

*Require a tree management plan prior to approval of development with the potential to remove or substantially impact trees. The Plan should be prepared by a licensed arborist using published standards and practices for protecting and monitoring tree health during and after construction.*

When trees are removed, the replacement trees should provide equivalent environmental and biological benefits:

***Program C-1.17C: Mitigation for Tree Removal.***

*Continue to implement mitigation requirements for tree removal in new development. When necessary, this could include planting of trees in locations other than the project site, planting native trees in lieu of non-natives, or reducing the footprint of proposed development. Tree replacement should be based on a value that is equal to or greater than the carbon footprint and ecological benefits of the trees being removed. Ecological benefits include water conservation, absorption of runoff, reduction of air pollution, energy reduction from shade and cooling effects, soil retention, slope stabilization, and wildlife support.*

14.25.050-D. Competent Design.

This is a challenging site. The owners may consider hiring a licensed architect to advise the design team on how to preserve the Redwood Grove and comply with all Hillside regulations. In 2007, a prior owner submitted plans prepared by a licensed architect for 2 new homes on this site, that complied with all Hillside requirements including the natural state, setbacks and parking, PLUS a fire truck turnaround and only required the removal of one 17" redwood tree. Project plans subject to a major environmental and design review permit must be signed by a licensed architect.

14.25.050-G. Landscape Design.

The natural landscape should be preserved in its natural state, insofar as practicable, by minimizing grading and tree and rock removal.

In addition, SRMC 14.25.090 C, "Findings must be made that the project design minimizes adverse environmental impacts". Note: This is a requirement not an option. You **must** make this finding that

adverse environmental impacts are minimized. Removing 9 redwood trees and threatening 2 more on the site maximizes the negative environmental impacts of this project and cannot be ignored.

### Arborist Report:

The Arborist Report prepared by Balcerak Design dated April 5, 2019, for 52 Fremont, describes redwood trees #1 as touching the existing residence (at 54 Fremont). Both tree #1 and #2 are extremely close to the existing house which currently has an open post and pier foundation with exposed dirt and some lattice connecting the posts. These trees are dismissed in the arborist report as not located on the subject property.

However, since this report was done, the applicant has added major reconstruction to the existing house at 54 Fremont including the pouring of a new foundation. The arborist report does not include an evaluation of tree #1 and #2 nor any protection of these trees during the pouring of the foundation, putting these trees at risk. This expanding project puts the entire redwood grove at risk of being totally decimated.

The arborist defers responsibility of tree protection to the General Contractor who is expected to inform all subcontractors and other individuals, whether work related or not, about tree protection requirements. The arborist is placing the General Contractor in a position for which he is not trained or qualified and the arborist only requires that he be notified if an “unexpected condition” arises.

The arborist should be responsible for the protection of the trees throughout the project. He should be required to be on-site to oversee the installation of the protective measures, during the excavation and grading of the site to ensure proper protection of the trees, and make periodic site visits to ensure that all protective measures are being followed and remain in place. The arborist should also periodically inspect the site for a reasonable time period after construction to ensure the ongoing health of the trees.

### Drainage Report

A “drainage review” dated May 1, 2019, was submitted by the Balcerak Design, a licensed landscape architect, for 52 Fremont only. This “review” did not include the entire project area which includes 54 Fremont. A Hydrology Study should be prepared by a civil engineer for the entire project site. Ali Giudice states in her letter to the applicant dated August 31, 2017, that the formal application shall include a Hydrology report.

### Geotechnical Review

A Geotechnical Peer Review report was prepared by Scott Stephens, a geotechnical engineer for Miller Pacific Engineering on January 25, 2021. He comments that the existing house at 54 Fremont appears to be leaning in the downhill direction. This report requests a written response from Reese & Associates, the project engineer, for 9 geotechnical issues raised in his report. As of the date of this letter and after my repeated requests to Planning staff to upload the Reese & Associates written response to these 9 items, it is still NOT available for public access on the project website.

Also included in this report, Scott Stephens states:

"We recommend that the following item be responded to at the planning level of the project. 1) Clarification should be made that the project includes both the upgrade/remodel of the existing residence and the new structure. If both are included, the geotechnical report should be updated to include recommendations both structures and updated debris flow hazard mitigation

measures. The civil plans should also be updated to include preliminary grading, drainage, and existing utility connection for 54 Fremont."

My understanding is that Planning staff does not intend to follow this recommendation.

In summary, these are my recommendations for your consideration:

1. All redwood trees need to be preserved and protected, especially the 12-tree redwood grove (trees #1 - #12 on the tree plan, Sheet T1.0).
2. Both reconfigured lots must comply with all Hillside development standards, including the Natural State requirement.
3. The Arborist report needs to be updated to include the entire project, including tree #1 and #2
4. The ADU needs to be removed with a revised plan for the remodel of the existing house at 54 Fremont.
5. Additional parking needs to be addressed for 54 Fremont.
6. The Reese & Associates report needs to be updated to include 54 Fremont.
7. The Reese & Associates written response to the 9 geotechnical issues raised by the Miller Pacific peer review must be made available to the public.
8. The new Lot line needs to be straight to avoid maintenance and/or boundary disputes between future owners (See memo from Public Works dated February 27, 2019).

Thank you for your consideration of my comments.

Sincerely,

Victoria DeWitt

Subject: Public comment for DRB hearing on 11/16/21

Dear Ms. Mendez &amp; Design Review Board Members:

I am writing to express my grave concern about the potential removal of the redwood trees at the 52-54 Fremont/Marquard Project. I urge the Design Review Board not to approve a plan that involves the removal of these precious trees which the City of San Rafael should honor and protect. Let us model to our children what it means to be stewards of the land.

Please include my comment in correspondence for the 52-54 Fremont/Marquard Project for the Design Review Board hearing on 11/16/21.

Please confirm receipt of this message.

Sincerely,

Siobhán Edmondson, PsyD

**Subject:** Redwood trees

I support saving the 9 redwood trees that are currently slated for removal as part of the 52-54 Fremont/Marquard Project. Please find another solution for this project that allows the trees to remain as they are.

Please send me verification of receipt.

Thank you,

Robert and Diana DeGraff

**RE: 52-54 Fremont/Marquard Review**

Honorable Board Members,  
Sustainable San Rafael welcomes your review of the previous deliberations of the DRB Subcommittee and consideration of coast redwoods on these two parcels.

Much has changed since this project was first before you, and certainly since these two non-conforming lots were created over a century ago. Climate change has become increasingly central to all decision-making, including the role of sequestration by trees, soil, and other natural elements in reducing greenhouse gases. San Rafael's General Plan 2040 has been adopted, incorporating these new priorities.

In addition, a respiratory pandemic and 'apocalyptic orange' wildfire smoke have driven home the health benefits of the clean air provided by our natural environment. Heat waves and drought have reminded us that vegetation also cools our city and helps maintain soil moisture. And as you can see from the letters submitted to you this evening, trees in particular—especially big, iconic trees like coast redwoods—hold a lasting and growing place in the hearts of San Rafael residents.

The fact that these are non-conforming lots (in aggregate only about 75% of the size that today's code would require) means that the City must scrupulously apply current rules to achieve current values, such as preservation and enhancement of the remarkable grove of mature redwoods that graces this site.

In this case, the chief tool at your disposal is the Hillside Overlay District, which requires that sites retain a sizable area in an undisturbed 'natural state' and that trees over a foot in diameter be kept. These regulations provide an elegant means of preserving the existing redwoods, while allowing fair and reasonable development of the site.

The aggregate 'natural state' required for these two sites is 9,921 square feet. In approving the requested lot line adjustment, the City should maintain this overall requirement while allowing the deficit on the new upper lot to be made up for with an increase to the 'natural state' on the lower lot by 724 square feet, consolidated to protect the redwood grove.

This could be accomplished by somewhat reducing the footprint

of the new house on the lower lot, while reorienting its upper two floors to run perpendicular, rather than parallel to the street. The reorientation would allow the heart of the redwood grove to be retained (trees #5 – 11). Relocating the bio-retention basin at the northeast corner of the lot could preserve the remaining two threatened redwoods (trees #17 & 18). The redesign of the house in this manner might well enhance the ‘mountain cabin style’ and ‘alpine feel’ of the concept by incorporating the redwoods more fully into the design.

About half of the additional ‘natural state’ could also be achieved by potentially allowing the two guest parking spaces to utilize the *undeveloped* portion of the street right-of-way (essentially treating them as on-street parking spaces, without narrowing the traveled way). Moving the parking east in this manner would also greatly reduce the height of the associated retaining walls. More importantly, it would decrease the disturbance to the existing redwood grove, including the vitally important root zone and micorrhizal fungi community that support the nutrition and interconnectivity of the trees.

The size and longevity of redwoods make them one of our premier sequesters of carbon, with each 50-year old tree absorbing an estimated 1,402 pounds of greenhouse gas every year, while storing a total of over 15 metric tons (per the ‘itree’ website). This is a substantial contribution to San Rafael’s goal of ‘drawing down’ atmospheric carbon below greenhouse gas emission levels by 2045. We are blessed that redwoods are an original part of our community. We need to be planting many more. And we need to protect and care for those we have.

The mature existing redwoods on these two lots are already providing this critical ecological service at a rate that replacement trees will never achieve in the time needed to curb climate change, especially if replaced by much smaller trees. We therefore strongly urge that all existing redwoods on both lots be preserved, and that any replacement of other species be done with redwoods or other large native species wherever sufficient space exists on either lot.

We ask you to prevent the removal of these magnificent trees from becoming the first instance of the City’s failure to adequately implement its Hillside ordinance. Thank you for your careful consideration of this potentially precedent-setting decision.

Sincerely,

William Carney  
President

Please have our letter below included in correspondence for 52-54 Fremont/Marquard Project scheduled for the Design Review Board hearing on Nov 16, 2021.

Would you please send us verification of receipt?

Thank you!

Paula & Alan Spencer

\*\*\*\*\*

At the Design Review Board meeting scheduled for November 16, 2021, as part of a proposal to develop two lots at 52/54 Fremont/Marquard, you'll be determining the fate of nine redwood trees and other trees located on the lots.

San Rafael has been designated a 'Tree City USA' community, which implies protection for trees in its borders. For many reasons, including the following from 'Tree City USA' itself, please do not approve the removal of these trees:

- Carbon sequestration. Trees release oxygen and sequester carbon from the atmosphere, thereby reducing greenhouse gases, mitigating the effects of climate change. Neighborhoods with trees are seven to nine degrees cooler than those without. When redwoods are cut down, they release much of their stored carbon back into the atmosphere.
- Stormwater reduction. Trees reduce runoff and erosion from stormwater by about 7 percent. Reducing runoff means less pollution and less need to add more stormwater pipes.
- Air quality. One tree over 50 years generates \$ 1,250 in oxygen, recycles \$37,500 of water, removes \$62,000 of air pollution, and controls \$31,250 worth of soil erosion.
- Energy use reduction. The evaporation from a single large tree can produce the cooling effect of ten, room-size air conditioners operating 20

hours a day.

- Wildlife habitat. Trees provide homes for birds, wildlife, and insects in the urban environment.

- Quality of life. Trees help absorb the sounds of traffic in urban areas by 40%. Green space plays a major role in improving mental and physical health.

Please honor the trees, honor the 'Tree City USA' program, and do your part in helping to save the planet by saving these trees. Every decision matters, every bit helps.

Thank you for your consideration.

Paula & Alan Spencer,  
an Anselmo

## Design Review Board Meeting REESE Report comments

Steve Thomson <[REDACTED]>

Mon 11/15/2021 8:06 PM

To: Distrib- City Clerk <City.Clerk@cityofsanrafael.org>

Cc: Alicia Giudice <Alicia.Giudice@cityofsanrafael.org>; Mayor Kate <Kate.Colin@cityofsanrafael.org>; Leslie Mendez <Leslie.Mendez@cityofsanrafael.org>; Don Jeppson <Don.Jeppson@cityofsanrafael.org>

After repeated requests to City planners, the much-awaited REESE & Associates report has finally surfaced for public review and perhaps yours as well, for the designs proposed at 54 and 52 Fremont Rd in San Rafael.

Reese responses to the peer review comments from Miller Pacific Engineering Group (MPEG) report on Jan 25, 2021 are ill conceived and without relevance for the following reasons To any casual observer, one asks the question why Reese comments are slanted and collectively bear no merit on the basis of Response to **Comment #9**: " We have not been provided with grading and foundation plans for the project at this time."

**Comment #1**: ...in regards to 54 Fremont "*...new or updated soil report should be performed to provide foundation recommendations for the existing structure.*" Yet Reese attempts to make the case that their investigation included excavation to depths of 10 feet below existing grade as opposed to GeoEngineering Inc findings of bedrock at 19 feet Hardly a minor discrepancy Reese then concludes "*...new foundations may be warranted.*" Clearly an understatement to say the least.

**Comment #2**: Subsurface investigations depend largely on WHERE the bores are taken on the site which may vary depending on proximity to the existing structure Excavations of 20 feet indicated by MPEG, compared to 10 feet proposed by Reese are two entirely different engineering challenges. What's of greatest value in deciding the depth of bores is precisely WHERE the bores are taken, not just cherry-picked in an area to satisfy the need for minimal structural integrity and lesser cost. Reese does propose to conduct " *additional test boring along the upslope of the proposed house in the vicinity of the planned excavation and within close proximity to Test Pit 2 and Geoengineering's Test Boring D.*" I believe bores should not be done in the "vicinity", rather should be taken immediately adjacent and in line with new foundation piers -- which are impossible to locate because per **Comment #9**, Reese has " not been provided with grading and foundation plans for the project at this time "

**Comment #8**: Reese states that "*Minimum pavement sections were never requested and are not included in our scope of work.*" Oddly, their report goes on to contemplate various compaction plans for driveway materials and substrate Clearly the weight of vehicles and large service trucks impact the entire design of 54 Fremont and the necessity of parking accommodations to support it. On-site parking requirements should be clearly identified for ease of access on this substantial remodel of 54 Fremont, plus the proposed ADU on the same site which adds further congestion to an already compromised project seeking numerous exceptions to SR Hillside Design Guidelines

In conclusion, from a Design Review perspective, it seems implausible to evaluate the entire design structure until a complete set of plans are produced with clear responses to the unknown conditions of today

I look forward to speaking up at tomorrow night's public meeting with the Design Review Board.

A confirmation of receipt to this email would be appreciated

Steve Thomson

**RE: Errors and Omissions on the Staff Report prepared by Dave Hogan for the Design Review Board meeting on 11/16/2021**

**Project: 52-54 Fremont/Marquard**  
File No. ED18-066/LLA18-005/ED20-044/EX19-010

Chair Larry Paul and Design Review Board members:

Please consider the following errors and omissions on the staff report when reviewing this project:

1. The Staff report references December 4, 2018, as the date when the Design Review Board (DRB) last reviewed this project. This date is when the DRB reviewed 38 Upper Fremont, not 52-54 Fremont. The first and last date that the DRB reviewed 52-54 Fremont was November 19, 2019.
2. The consensus comments the staff report lists for the corrected DRB meeting of November 19, 2019, omitted the following consensus comment (source: recorded and approved DRB minutes):

**“The Board has difficulty supporting the findings for the proposed Exceptions to both Natural State and Gross Building Square Footage; the applicant is encouraged to reduce the size of the project and/or the configuration of the LLA to eliminate the required Exceptions.”**

3. The title of the report is incorrect. It says: “REPORT TO DESIGN REVIEW BOARD SUBCOMMITTEE”. It should say: “REPORT TO DESIGN REVIEW BOARD.”

Thank you for your attention to this matter.

Sincerely,

Victoria DeWitt
