As a longtime Terra Linda/San Rafael homeowner and resident, I'm happy that we'll be building more affordable housing with the Los Gamos project. As an environmentalist, I believe that we should make approval of this project conditional on it being an all-electric development.

By building this as an all-electric new development we'll be acting in accordance with San Rafael's Climate Change Action Plan 2030 and the General Plan 2040 and reducing our city's per capita greenhouse gas emissions. Gas fueled appliances have no place in our future due to climate change and the indoor pollution that they cause. While it's slow and expensive to retrofit homes and businesses in San Rafael to make them all-electric, it's efficient to commit to all-electric new development, every time. That's what we need to do with this project—and every future one.

Thanks,

Anne-Christine

"I just want to urge you all to have a good time while you are fighting for freedom. First of all, we don't always win, and it might get to be the only fun you'll ever have. And second of all, it's a better way to live." – Molly Ivins

The Neighborhood at Los Gamos Project

I am a resident of the City of San Rafael. It's my understanding the City is meeting today to potentially approve The Neighborhood at Los Gamos project. I request any such approval contain a provision for highly efficient electric appliances. It's important that we have thoughtful development with an eye toward the future. At this point with the advancements in both solar energy and home appliances, coupled with the degradation of our environment due to greenhouse gas emissions, the use of electrical appliances should be part of our future. It's important that we take a stand as stewards of our community to encode the use of electricity instead of gas where feasible.

Sincerely,
Robin Wythe
