Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  | Have children living with you |  |  | G |
|  | None of the above |  | ,b |  |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

| 2. It's important to me that I be involved in City Council decision-making. | Strongly agree <br> Agree <br> Neutral <br> Disagree <br> Strongly disagree <br> I don't know | a |  | a | a |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Godbe Research // San Rafael Community Engagement \& Communications Survey // Overall Crosstabs 09-23-14

Comparisons of Column Proportions ${ }^{\text {b }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  | Attend ad hoc meetings dealing with specific issues |  |  |
|  | Organize or participate in protests |  | a |
|  | Call the media |  |  |
|  | Send letters to the editor |  |  |
|  | Contact elected officials |  |  |
|  | Contact City staff |  |  |
|  | I don't participate or give my opinion to City decision makers | A B C |  |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Comparisons of Column Proportions

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Comparisons of Column Proportions

|  |  | Age |
| :--- | :--- | :---: |
|  |  | NA |
|  |  | $(\mathrm{J})$ |
|  | Strongly agree <br> 6. I receive ample <br> information about City <br> activities and events. | Agree |
|  | Neutral <br> Disagree <br> Strongly disagree <br> I don't know | . b |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  | Strongly disagree |  | a |
|  | I don't know |  | A B C |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

| Neutral <br> Disagree <br> Strongly disagree <br> I don't know | .0 |  |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

| 9. When I offer input on an issue, receiving information on the final decision is important to me. | Strongly agree <br> Agree <br> Neutral <br> Disagree <br> Strongly disagree <br> I don't know | , b |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

## Comparisons of Column Proportions ${ }^{\text {b }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Comparisons of Column Proportions

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Comparisons of Column Proportions

Comparisons of Column Proportions

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  |  | Have children living with you | None of the above |
|  |  | (E) | (F) |
| 13. City information is complex, confusing, and inaccessible. | Strongly agree |  | . |
|  | Agree |  |  |
|  | Neutral |  |  |
|  | Disagree |  |  |
|  | Strongly disagree |  | a |
|  | I don't know |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  | Strongly agree <br> 15. It is important to ensure <br> representative participation <br> in community engagement. | Agree <br> Neutral <br> Disagree <br> Strongly <br> dicanron <br> I don't know |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

| 15. It is important to ensure representative participation in community engagement. | Strongly agree <br> Agree <br> Neutral <br> Disagree <br> Strongly disagree <br> I don't know | a | . ${ }^{\text {a }}$ | . ${ }_{\text {a }}$ | a a a | . | a |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.This category is not used in comparisons because the sum of case weights is less than two.
c.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

|  | Prefer not to state |  | a |  |  |  |  |
|  | NA |  |  | a |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
