LLG Ref: 2.21.4410.1

Subject: ***Traffic Circulation Analysis Scope of Work for Related Bristol Project, California***

Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit the following Traffic Circulation Analysis Scope of Work for the proposed Related Bristol project in the City of Santa Ana for your review and approval. The work program summarized below considers the City of Santa Ana requirements, preliminary discussions on the Project, and our recent experience within the City, inclusive of the preparation of the following development-related traffic studies:

- *Revised Traffic Impact Analysis Report for First Street Family Apartments, dated January 2016,*
- *Revised Traffic Impact Analysis Report for the Madison Mixed-Use Development, dated August 4, 2017, and*
- *Traffic Impact Analysis Report for the 1660 E. First Street Elks Apartments dated June 26, 2018.*
- *Revised Traffic Impact Analysis Report for 4th and Cabrillo Mixed-Use Project (Central Pointe), dated July 30, 2020.*

Traffic Study Scope of Work

The Traffic Circulation Analysis for the Related Bristol Project (herein after referred to as Project) will satisfy the traffic impact requirements of the City of Santa Ana.

A. Project Location: The Project site, currently known as Metro Town Square, is a 41.3±-acre rectangular-shaped parcel of land generally located west of Bristol Street, east of S. Plaza Drive, north of Sunflower Avenue, and south of MacArthur Boulevard in the City of Santa Ana, California. The subject property's land use designation in the newly adopted Santa Ana General Plan is District Center-High (DC-5) which is designed to serve as anchors to the City's commercial corridors and to accommodate major development activity.

The subject property is currently developed with 465,063 square-feet (SF) of retail/commercial uses. The northern half of the property is developed with approximately 45% of floor area whose tenants include Vons, LA Fitness, Bank of America, and a variety of retail, service retail/commercial, medical, restaurant, and fast-food uses. The southern half of the property contains approximately 55% of floor area with a tenant mix of retail, service retail/commercial, restaurant, and fast-food uses. Existing major tenants on the southern half of the center include TJ Maxx, Ross Dress for Less, Cost Plus World Market, and Red Robin.

An LG2WB Company Founded 1966

Vehicular access to the Project site is currently provided via unsignalized driveways located along MacArthur Boulevard, Bristol Street, Sunflower Avenue, S. Plaza Drive, and Callen's Common. Signalized access is provided along Bristol Street at Callen's Common. ***Figure 1-1*** presents a vicinity map that illustrates the general location of the Project and surrounding street system. ***Figure 2-1*** is an existing aerial photograph of the Project site.

B. Project Description: The proposed Project, which will be contained in a Specific Plan, will include the development of up to 3,750 apartment units, 200-unit senior continuum care, 250 hotel rooms, and 350,000 SF retail/commercial. ***Table 2-1*** provides a summary of the existing land uses and proposed Project components**,** whereas ***Table 2-2*** presents the anticipated development that would occur with each of the Project's phases. ***Figure 2-2A*** and ***Figure 2-2B*** presents the conceptual site plan's ground floor and upper floor layout, respectively, provided by RCR Bristol LLC, dated May 7, 2022.

Figure 2-3 presents the conceptual site circulation plan, provided by RCR Bristol LLC, dated June 2, 2022. As shown in *Figure 2-3,* vehicular access to the Project site will be provided via five (5) unsignalized driveways along S. Plaza Drive, one (1) signalized driveway (Callen's Common) on S. Plaza Drive, two (2) unsignalized driveways along MacArthur Boulevard, three (3) unsignalized Driveways along Bristol Street, one (1) signalized driveway (Callen's Common) on Bristol Street, one (1) signalized driveway (Driveway C) on Bristol Street, and two (2) unsignalized driveways along Sunflower Avenue and one signalized driveway along Sunflower Avenue. *Figure 2-3* also includes proposed lane configuration and control type.

Pedestrian circulation for the proposed Project would be provided via existing and/or proposed relocation of public sidewalks along S. Plaza Drive, MacArthur Boulevard, Bristol Street, and Sunflower Avenue which will connect to the Project's internal network of landscaped paseos and pedestrian-friendly pathways (known as the "Green Link"), as illustrated in *Figure 2-3*.

The Project is expected to be completed in three phases. Completion of Phase 1 is anticipated by Year 2030 which is the southern half of the site, with Phase 2 completion by Year 2032 which is the northern half of the site adjacent to Bristol Street and Phase 3 completion by Year 2036 which is the northern half of the site adjacent to Plaza Drive. *Figure 2-2A* and *Figure 2-2B* identify the anticipated phasing of the Project.

C. Project Traffic Generation: The trip generation potential of the Existing Land Use and the proposed Project will be estimated using trip rates contained in the

11th Edition of *Trip Generation,* published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2021]. As shown in ***Table 5-1,*** ITE Land Use 221: Multifamily Family Housing (Mid-Rise), ITE Land Use 255: Continuing Care Retirement Community, ITE Land Use 310: Hotel, and ITE Land Use 820: Shopping Center trip rates will be used to forecast the trip generation potential of the Existing Land Use and proposed Project, respectively.

Table 5-2 identifies the existing trips generated by the site and compares it to the proposed Project by phase as identified in *Table 2-2*. A review of the upper portion of *Table 5-2* indicates that the Phase 1 portion of the Project will generates 4,167 "net" daily trips, with 545 "net" trips (157 inbound, 388 outbound) produced in the AM peak hour and 359 "net" trips (233 inbound, 126 outbound) produced in the PM peak hour on a "typical" weekday.

The middle portion of *Table 5-2* indicates that the proposed Phase 2 portion of the Project is forecast to generate 3,241 "net" daily trips, with 293 "net" trips (69 inbound, 224 outbound) produced in the AM peak hour and 271 "net" trips (164 inbound, 107 outbound) produced in the PM peak hour on a "typical" weekday.

The lower portion of *Table 5-2* indicates that the proposed Phase 3 portion of the Project is forecast to generate 80 fewer "net" daily trips, with 381 "net" trips (41 inbound, 340 outbound) produced in the AM peak hour and 58 "net" trips (79 inbound, -21 outbound) produced in the PM peak hour on a "typical" weekday.

The bottom of *Table 5-2* indicates that the proposed Project for Phases 1, 2 and 3 are forecast to generate 7,328 "net" daily trips, with 1,219 "net" trips (267 inbound, 952 outbound) produced in the AM peak hour and 688 "net" trips (476 inbound, 212 outbound) produced in the PM peak hour on a "typical" weekday.

Please note that trip generation for the proposed Project and the existing retail center includes adjustments for pass-by as recommended by ITE. The pass-by reduction factors are based on a review of available information published in the 11th Edition of *Trip Generation,* published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2021]. The proposed Project trip generation also includes adjustments for internal capture, consistent with the *Trip Generation Handbook, 3rd Edition,* published by ITE (September 2017), to account for internal interaction between the hotel, residential, and retail components of the Project. Additionally, a 5% non-auto trip reduction and a 5% TDM reduction was applied to the proposed Project to account for other modes of transportation (i.e. public transit, ride share, walking, biking, etc.).

D. Project Trip Distribution Pattern: See attached, ***Figures 5-1 through 5-4*** presents the Project Trip Distribution for residential, senior continued care, hotel and retail for Phase 1 construction, respectively. ***Figures 5-5 and 5-6*** presents the Project Trip Distribution for residential and retail for Phase 2 construction, respectively. ***Figures 5-7 and 5-8*** presents the Project Trip Distribution for residential and retail for Phase 3 construction, respectively. Project traffic both entering and exiting the site have been distributed and assigned to the adjacent street system based on the following considerations:

- location of site access points in relation to the surrounding street system,
- the site's proximity to major traffic carriers and regional access routes,
- physical characteristics of the circulation system such as lane channelization and presence of traffic signals that affect travel patterns,
- presence of traffic congestion in the surrounding vicinity,
- ingress/egress availability at the project site and turn restrictions at the Project driveways, if any, and
- input from City staff.

Figures 5-9 and ***5-10*** presents the Project only volumes for the Phase 1 component of the Project. The traffic volume assignments presented in *Figures 5-9* and *5-10* reflect the traffic distribution characteristics shown in *Figures 5-1 through 5-4* and the traffic generation forecast of the proposed Project presented in Row [B] of *Table 5-2.*

Figures 5-11 and ***5-12*** presents the Project only volumes for the Phase 1 and 2 components of the Project. The traffic volume assignments presented in *Figures 5-11* and *5-12* reflect the traffic distribution characteristics shown in *Figures 5-1 through 5-6* and the traffic generation forecast of the proposed Project presented in Rows [B] and [E] of *Table 5-2.*

Figures 5-13 and ***5-14*** presents the Project only volumes for the Phase 1, 2 and 3 components of the Project. The traffic volume assignments presented in *Figures 5-13* and *5-14* reflect the traffic distribution characteristics shown in *Figures 5-1 through 5-8* and the traffic generation forecast of the proposed Project presented in Rows [B], [E] and [H] of *Table 5-2.*

E. Traffic Study Locations: Subject to confirmation by City staff, the following forty-one (41) key study intersections and forty-three (43) roadway segments represent a potential list of study locations. *Figure 1-1* identifies the study locations.

Key Study Intersections

1. Fairview Street at Segerstrom Avenue (Santa Ana)
2. Bear Street at Segerstrom Avenue (Santa Ana)
3. Bristol Street at Segerstrom Avenue (Santa Ana)
4. Flower Street at Segerstrom Avenue/Dyer Road (Santa Ana)
5. Main Street at Dyer Road (Santa Ana)
6. Fairview Street at MacArthur Boulevard (Santa Ana)
7. Bear Street at MacArthur Boulevard (Santa Ana)
8. S. Plaza Drive at MacArthur Boulevard (Santa Ana)
9. Bristol Street at MacArthur Boulevard (Santa Ana)
10. Flower Street at MacArthur Boulevard (Santa Ana)
11. Main Street at MacArthur Boulevard (Santa Ana)
12. SR-55 SB Ramps at MacArthur Boulevard (Santa Ana/Caltrans)
13. SR-55 NB Ramps at MacArthur Boulevard (Irvine/Caltrans)
14. S. Plaza Drive at Callen’s Common (Santa Ana)
15. Bristol Street at Callen’s Common (Santa Ana)
16. Fairview Road at Sunflower Avenue (Santa Ana/Costa Mesa)
17. Bear Street at Sunflower Avenue (Santa Ana/Costa Mesa)
18. S. Plaza Drive at Sunflower Avenue (Santa Ana/Costa Mesa)
19. Project Driveway at Sunflower Avenue (Santa Ana/Costa Mesa)
20. Bristol Street at Sunflower Avenue (Santa Ana/Costa Mesa)
21. Flower Street/Sakioka Drive at Sunflower Avenue (Santa Ana/Costa Mesa)
22. Main Street at Sunflower Avenue (Santa Ana/Costa Mesa)
23. Red Hill Avenue at Main Street (Irvine)
24. Fairview Road at S. Coast Drive (Costa Mesa)
25. I-405 NB Off-Ramp at S. Coast Drive (Costa Mesa/Caltrans)
26. Bear Street at S. Coast Drive (Costa Mesa)
27. Bristol Street at Anton Boulevard (Costa Mesa)
28. Fairview Road at I-405 NB Ramps (Costa Mesa/Caltrans)
29. Fairview Road at I-405 SB Ramps (Costa Mesa/Caltrans)
30. Bristol Street at I-405 NB Ramps (Costa Mesa/Caltrans)
31. Bristol Street at I-405 SB Ramps (Costa Mesa/Caltrans)
32. Bear Street at Paularino Avenue (Costa Mesa)
33. Bristol Street at Paularino Avenue (Costa Mesa)
34. Fairview Road at Baker Street (Costa Mesa)
35. Bear Street at Baker Street (Costa Mesa)
36. Bristol Street at Baker Street (Costa Mesa)
37. Bear Street at SR-73 NB Ramps (Costa Mesa/Caltrans)
38. Bear Street at SR-73 SB Ramps (Costa Mesa/Caltrans)
39. Spruce Street at Segerstrom Avenue (Santa Ana)
40. Bristol Street at Newport Avenue (SB) (Costa Mesa)
41. Bristol Street at Newport Avenue (NB) (Costa Mesa)

<u>Key Roadway Segments</u>

A. Fairview Street, between Segerstrom Avenue and MacArthur Boulevard (Santa Ana)
B. Fairview Street, between MacArthur Boulevard and Sunflower Avenue (Santa Ana)
C. Fairview Street, between Sunflower Avenue and S. Coast Drive (Costa Mesa)
D. Fairview Street, between S. Coast Drive and I-405 NB Ramps (Costa Mesa)
E. Fairview Street, between I-405 NB Ramps and I-405 SB Ramps (Costa Mesa/Caltrans)
F. Fairview Street, between I-405 SB Ramps and Baker Street (Costa Mesa)
G. Bear Street, between Segerstrom Avenue and MacArthur Boulevard (Santa Ana)

H. Bear Street, between MacArthur Boulevard and Sunflower Avenue (Santa Ana/Costa Mesa)
I. Bear Street, between Sunflower Avenue and S. Coast Drive (Costa Mesa)
J. Bear Street, between S. Coast Drive and Paularino Avenue (Costa Mesa)
K. Bear Street, between Paularino Avenue and Baker Street (Costa Mesa)
L. S. Plaza Drive, between MacArthur Boulevard and Callen's Common (Santa Ana)
M. S. Plaza Drive, between Callen's Common and Sunflower Avenue (Santa Ana)
N. Bristol Street, between Segerstrom Avenue and MacArthur Boulevard (Santa Ana)
O. Bristol Street, between MacArthur Boulevard and Callen's Common (Santa Ana)
P. Bristol Street, between Callen's Common and Sunflower Avenue (Santa Ana)
Q. Bristol Street, between Sunflower Avenue and Anton Boulevard (Costa Mesa)
R. Bristol Street, between Anton Boulevard and I-405 NB Ramps (Costa Mesa)
S. Bristol Street, between I-405 NB Ramps and I-405 SB Ramps (Costa Mesa/Caltrans)
T. Bristol Street, between I-405 SB Ramps and Paularino Avenue (Costa Mesa)
U. Bristol Street, between Paularino Avenue and Baker Street (Costa Mesa)
V. Flower Street, between Dyer Road and MacArthur Boulevard (Santa Ana)
W. Flower Street, between MacArthur Boulevard and Sunflower Avenue (Santa Ana)
X. Main Street, between Dyer Road and MacArthur Boulevard (Santa Ana)
Y. Main Street, between MacArthur Boulevard and Sunflower Avenue (Santa Ana)
Z. Main Street, between Sunflower Avenue and Red Hill Avenue (Santa Ana/Irvine)
AA. Segerstrom Avenue, between Fairview Street and Bear Street (Santa Ana)
BB. Segerstrom Avenue, between Bear Street and Bristol Street (Santa Ana)
CC. Segerstrom Avenue, between Bristol Street and Flower Street (Santa Ana)
DD. Dyer Road, between Flower Street and Main Street (Santa Ana)
EE. MacArthur Boulevard, between Fairview Street and Bear Street (Santa Ana)
FF. MacArthur Boulevard, between Bear Street and S. Plaza Drive (Santa Ana)
GG. MacArthur Boulevard, between S. Plaza Drive and Bristol Street (Santa Ana)
HH. MacArthur Boulevard, between Bristol Street and Flower Street (Santa Ana)
II. MacArthur Boulevard, between Flower Street and Main Street (Santa Ana)
JJ. MacArthur Boulevard, between Main Street and SR-55 SB Ramps (Santa Ana)
KK. MacArthur Boulevard, between SR-55 SB Ramps and SR-55 NB Ramps (Santa Ana/Irvine/Caltrans)
LL. Sunflower Avenue, between Fairview Street and Bear Street (Santa Ana/Costa Mesa)
MM. Sunflower Avenue, between Bear Street and S. Plaza Drive (Santa Ana/Costa Mesa)
NN. Sunflower Avenue, between S. Plaza Drive and Bristol Street (Santa Ana/Costa Mesa)
OO. Sunflower Avenue, between Bristol Street and Flower Street (Santa Ana/Costa Mesa)
PP. Sunflower Avenue, between Bristol Street and Flower Street (Santa Ana/Costa Mesa)
QQ. Bristol Street, south of Baker Street (Costa Mesa)

F. **Traffic Counts:** Existing (Year 2022) AM and PM peak hour traffic counts were collected in May, September, October, and November 2022 at all forty-one (41) study intersections. Existing (Year 2022) ADT traffic counts at the forty-three (43) roadway segments were collected in September and October 2022.

Due to the COVID-19 virus, traffic patterns have changed and are generally lower than pre-COVID-19 conditions. As such, to establish "baseline" traffic conditions pre-COVID-19, LLG will research historic data within the study area. Given the availability of historic data, a factor will be developed to establish the change in traffic counts. This factor will be applied to the Year 2022 COVID-19 counts to represent pre-COVID-19 conditions. The traffic counts will also be grown by 0.5% per year to create Year 2022 baseline conditions.

G. Near-Term Cumulative Background Traffic:

- Phase 1 Project Completion Year: 2030
- Phase 2 Project Completion Year: 2032
- Phase 3 Project Completion Year: 2036
- Ambient Growth Rate: 1% per year
- Cumulative Projects: Planned and/or approved projects within the vicinity of the Project site that may contribute traffic to the Project study area will be researched at the City of Santa Ana and adjacent jurisdictions (i.e. Costa Mesa, Tustin and Irvine) and confirm with City staff.
- As an alternative approach, near-term Year 2030, 2032 and 2036 forecasting would be developed by interpolating between the existing traffic volumes (Year 2022) and buildout traffic volumes (Year 2045 Buildout traffic volume forecast), subject to confirmation from the City.

H. Long-Term Buildout Traffic:

Long-Term traffic volumes forecasts will be developed based on buildout traffic volume projections using OCTAM 5.0. As such, LLG will prepare, using the OCTAM 5.0 approved computer traffic model, complete model runs for baseline conditions, and buildout conditions for the AM and PM peak periods and daily traffic conditions.

Forecast future buildout traffic volumes using the following methodology:

a. Peak period traffic volumes will be converted to peak hour (i.e., one-hour) traffic volumes using a conversion factor of 0.38 for the AM peak hour and 0.28 for the PM peak hour;
b. Calculate the difference between the baseline and buildout peak period traffic volumes and convert to AM and PM peak hour (i.e., one-hour) link traffic volumes;
c. Link traffic volumes (i.e., two-way directional traffic volumes on each roadway segment) will be post-processed using the “b-turns” program and the relationship of the base year validation model run output to the base year "ground" traffic counts to develop buildout AM and PM peak hour traffic volumes.

I. Analysis Scenarios: Prepare AM peak hour, PM peak hour, and daily Level of Service (LOS) calculations at up to 41 study intersections, plus the Project driveways, and 43 roadway segments to determine the potential impacts of the proposed Project. The following traffic scenarios will be prepared.

1. Existing Traffic Conditions;
2. Existing Plus Project (Phase 1) Traffic Conditions;
3. Scenario (2) with recommended improvements, if necessary;
4. Existing Plus Project (Phase 1 Plus 2) Traffic Conditions;
5. Scenario (4) with recommended improvements, if necessary;
6. Existing Plus Project (Phase 1, 2 Plus 3) Traffic Conditions;
7. Scenario (6) with recommended improvements, if necessary;
8. Near-Term (Year 2030) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);
9. Near-Term (Year 2030) Background Plus Project (Phase 1) Traffic Conditions;
10. Scenario (9) with recommended improvements, if necessary;
11. Near-Term (Year 2032) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);
12. Near-Term (Year 2032) Background Plus Project (Phase 1 Plus 2) Traffic Conditions;
13. Scenario (12) with recommended improvements, if necessary;
14. Near-Term (Year 2036) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);
15. Near-Term (Year 2036) Background Plus Project (Phase 1, 2 Plus 3) Traffic Conditions;
16. Scenario (15) with recommended improvements, if necessary;
17. Long-Term (Year 2045) Buildout Traffic Conditions;
18. Long-Term (Year 2045) Buildout Plus Project (Phase 1, 2 Plus 3) Traffic Conditions; and
19. Scenario (18) with recommended improvements, if necessary.

The LOS calculations will be based on the Intersection Capacity Utilization (ICU) methodology for signalized intersections and the Highway Capacity Manual (HCM) methodology for unsignalized intersections. The LOS calculations for roadway segments will be based on the Volume to Capacity (V/C) Ratio methodology. The Project's potential impacts will be based on the City of Santa Ana, Costa Mesa and/or Irvine significant impact criteria and Orange County CMP requirements.

The key study intersections at the I-405 Freeway, SR-55 Freeway and SR-73 will also be evaluated using the HCM signalized methodology per Caltrans requirements.

J. Other Issues:

- Evaluate Site Access and Internal Circulation. Assess operations of the project driveways on S. Plaza Drive, MacArthur Boulevard, Bristol Street, and Sunflower Avenue. Investigate the adequacy of site access and internal circulation, particularly with respect to vehicular queues at driveways, required stacking distance and potential impacts upon on-street traffic. Ensure that all access locations will provide safe egress and ingress including adequate sight distance in all directions,
- Run truck turning templates along internal roadways and intersections consisting of SU-30, trash truck and fire truck. At the service entrance to the grocery store run WB-50 and WB-67 truck templates to validate adequacy of truck movements.
- Identify measures to mitigate the impact of project traffic including roadway and intersection widening, traffic signals installation & modification signing, localized street improvement striping/channelization, raised curb median modification or new construction, and all other improvements to provide acceptable LOS,
- Conduct a queueing assessment for the I-405, SR-55 and SR-73 Off-Ramps at key study intersections,
- Prepare a standalone VMT screening analysis and summarize findings in memorandum format. Per the City of Santa Ana TIA Guidelines, the following criteria would apply to the Project given it is located within a Transit Priority Area (TPA). The secondary screening step includes verifications of the proposed Project's consistency with the RTP/SCS using two methods. It can be screened out if one of below conditions apply:
  - From a land-use review:
    - If the proposed land uses are already included in the RTP/SCS.
  - From a VMT/SP perspective:
    - If the resulting land use decreases the VMT/SP in the TAZ compared to the RTP/SCS assumption.

We appreciate the opportunity to provide this scope of work. Should you have any questions, please call us at (949)825-6175. Thank you.

---

[4] Source: *Trip Generation, 11th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2021).*

[5] Pass-by trips are made as intermediate stop on the way from one origin to a primary trip destination. Pass-by trips are attracted from traffic passing the site on adjacent streets, which contain direct access to the generator. For this analysis, the following pass-by reduction factors were used *Trip Generation, 11th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2021)*:
Shopping Center: Daily – Estimated to be 10% / AM Peak Hour – Estimated to be 10% / PM Peak Hour – 29%

[6] Internal capture trip reduction is consistent with the *Trip Generation Handbook, 3rd Edition,* published by ITE (September 2017). Project trip generation was adjusted to account for internal capture between the hotel, residential, and retail components of the Project.

APPENDIX B-II

HISTORIC TRAFFIC COUNT DATA

4.2 STUDY INTERSECTION GEOMETRY AND PEAK HOUR VOLUMES

Intersections were selected in consultation with the City of Santa Ana based on expected traffic impacts and vehicle volumes. The existing study intersection lane geometries are provided in the Appendix. Year 2020 AM peak hour turning movement volumes are shown in Table 4-1, and the PM peak hour volumes are shown in Table 4-2.

Table 4-1 Existing Year 2020 Volumes – AM Peak Hour

Notes:
* Not available.
(1) ADT – Average Daily Traffic Volumes
(2) LOS – Level of Service
(3) #D – total number of lanes in both directions divided by raised or striped median; #U – total number of undivided lanes in both directions
(4) Roadway capacities shown in Table 3-1.
(5) Yellow and red shading indicates an unacceptable level of service.
