MEMORANDUM

DATE: April 29, 2025

TO: Danny Morris, Development Director, Extra Space Storage

FROM: Ryan Bensley, Principal, LSA

SUBJECT: Class 32 Categorical Exemption for the Proposed Extra Space Storage 4th Street Project in Santa Ana, California

LSA is pleased to submit this memorandum in support of a Class 32 Categorical Exemption (CE) under the California Environmental Quality Act (CEQA) for the proposed Extra Space Storage 4th Street Project (project) in Santa Ana, California. This memorandum includes an introduction, project description, and evaluation of the project's consistency with the requirements of a Class 32 CE.

As discussed in this memorandum, the project would be exempt from detailed CEQA review under *State CEQA Guidelines* Section 15332. Under Section 15332, a project characterized as infill development qualifies for a Class 32 CE if the project (1) is consistent with the general plan and zoning ordinance; (2) occurs within city limits on a project site of no more than 5 acres substantially surrounded by urban uses; (3) is located on a site that does not have value as habitat for endangered, rare, or threatened species; (4) would not result in any significant impacts relating to traffic, noise, air quality, or water quality; and (5) is adequately served by all required utilities and services. Additionally, *State CEQA Guidelines* Section 15300.2 lists six exceptions to a categorical exemption related to location, cumulative impact, significant effect, scenic highways, hazardous waste sites, and historical resources.

PROJECT DESCRIPTION

Project Site

As shown in **Figure 1**, Regional Location (all figures provided in **Attachment A**), the project site is at 1030 East 4th Street in Santa Ana. The 3.48-acre project site is east of Standard Avenue between East 1st and East 4th Street in the northeastern part of the city. The project site consists of Assessor's Parcel Number 398-461-18. The project site is currently developed with 52,983 square feet (sf) of self-storage uses (eight one-story buildings), including a 1,841 sf one-story office building, an Extra Space Storage facility sign, and landscaping adjacent to 4th Street. The project site is generally flat in elevation. A single driveway along 4th Street currently provides vehicular access to the project site. An emergency access only gate is also located on Standard Avenue.

The project site serves as a buffer between residential and industrial uses. The project site is immediately bounded to the north by 4th Street, to the southeast by industrial uses, and to the northwest by multifamily residential uses. Regional access to the project site is provided by East 4th

and East 1st Street, which are to the north and south of the project site, respectively. Interstate 5 runs 0.7 mile east of the project site. East 4th Street provides local access to the project site.

Proposed Project

The proposed project would partially demolish two self-storage buildings: 753 sf of the easternmost building and 7,796 sf of the building in the center of the project site. The proposed project would also fully demolish the 1,841 sf office along 4th Street and a 6,294 sf self-storage building on the northwestern corner of the project site. Proposed project demolition would include the existing manager's apartment on site. All other existing uses on site, including the other self-storage buildings (36,299 sf in total) would remain. The proposed project would replace the demolished buildings with a three story, 91,558 sf, self-storage building that includes a manager's apartment and rental office. Additionally, the proposed project would provide 15 parking stalls. Under post-development conditions, the total self-storage square footage on site (including the existing 36,299 sf of self-storage uses to remain) would be 127,857 sf.

Figure 2, Conceptual Site Plan, provides an overview of the proposed site plan, including the locations of the existing buildings to remain, the proposed building and parking stalls, vehicular access, landscaping, and a trash enclosure. The trash enclosure would be accessed from the ground floor and would be in the southwest corner of the proposed building. No changes to the office hours of operation or storage gate hours are proposed. Office hours are currently Monday through Saturday, from 9:30 a.m. to 6:00 p.m. (closed on Sundays). Customer access hours are currently Monday through Sunday, from 6:00 a.m. to 8:00 p.m.

Zoning and General Plan Land Use Designations

According to the City of Santa Ana's (City) Zoning map, the project site is currently zoned for Specific Development-84 (SD-84) and Heavy Industrial (M2). Per SD- 84[1], the Transit Zoning Code, the project site is within the Industrial Overlay (I-OZ) Zone, which allows for land use activity and development permitted by existing M1 and M2 zoning to continue until the property owner chooses to apply a new zone as identified in the Transit Zoning Code. Properties within the I-OZ zone are required to comply with City Municipal Code Section 41, Article III, Divisions 18 and 19, as applicable. Per City Municipal Code Sections 41-489 and 41-427.5, self-storage uses are permitted on parcels zoned Light Industrial (M1) and M2 with approval of a Conditional Use Permit (CUP).

In 2002, the City introduced a CUP requirement for mini storage uses located within 500 feet of an arterial street. The existing self-storage facility was constructed prior to 2002 and does not currently operate under a CUP. With approval of the CUP, which would cover the entire property, the proposed project would be consistent with the City's zoning code and the I-OZ and M2 zoning designations.

Furthermore, according to the City's General Plan, the project site is designated for Urban Neighborhood – Medium – Low (UN-30) uses. The UN-30 designation allows for uses including

[1] City of Santa Ana. 2019a. Transit Zoning Code. Website: https://www.santa-ana.org/transit-zoning-code-documents/ (accessed January 28, 2025).

medium- and medium-high density apartments, townhomes, garden- or motor-court homes, and neighborhood-serving commercial uses.

For a detailed discussion regarding the proposed project's consistency with the General Plan and Zoning Code, refer to Criteria 1 for the Class 32 CE, below.

Site Access and Parking

The one existing driveway along 4th Street would continue to provide vehicular access to the project site. As shown on **Figure 2**, the proposed project would provide a total of 15 new parking stalls, including 4 Americans with Disabilities Act-compliant stalls, 4 electric-vehicle-capable stalls, and 2 manager's apartment stalls. In accordance with Section 41-1394 of the City's Municipal Code, the proposed 17-parking-space supply, including the 2 existing spaces, would provide adequate parking to accommodate the proposed project's parking demand.

Building Design

The proposed project would develop a 91,558 sf self-storage building, including 89,731 sf of self-storage area, a 1,147 sf rental office, and a 680 sf manager apartment. Under post-development conditions, the total new building square footage on site (including the existing 36,299 sf of self-storage uses to remain) would be 127,857sf. The proposed building would consist of three stories and reach a maximum height of approximately 35 feet (ft).

The existing office would be demolished and replaced with a 1,147 sf office in the northeastern corner of the proposed building, adjacent to 4th Street. As noted above, the office hours would remain the same as existing conditions. The proposed project would not require any additional employees on site compared to existing operations.

Infrastructure Improvements

As part of the project, new electricity, water, telephone, and sewer infrastructure would be constructed within the project site to connect the proposed building to the existing main lines. The proposed building would be connected to the existing sewer and water services on the site. Additionally, the existing on-site 8-inch fire water line would be rerouted around the proposed building. New on-site storm drain lines would be constructed on the project site and would connect to a new underground retention system that would be south of the proposed building.

Construction and Grading

Development of the proposed project would require partial demolition of two self-storage buildings (a total of 8,549 sf) and full demolition of one self-storage building and the existing office (a total of 8,135 sf). In addition, the proposed project would require excavation and grading of the site, delivery of materials, construction of the underground retention basin, and construction of the building area and proposed parking stalls. Construction of the proposed project is anticipated to commence in November 2025 and extend over a period of approximately 14 months. It is anticipated that construction workers would make a total of 21 trips per day during construction activities.

Based on the preliminary grading plans, the proposed project would require approximately 280 cubic yards (cy) of cut and 720 cy of fill, resulting in a total of 440 cy to be imported to the site. Demolition, grading, and building activities would involve the use of standard earthmoving equipment such as large excavators, cranes, and other related equipment.

Construction of the proposed project would require a maximum excavation depth of 8.5 feet.

Discretionary Actions, Permits, and Other Approvals

In accordance with Sections 15050 and 15367 of the *State CEQA Guidelines*, the City is the designated Lead Agency for the proposed project and has principal authority and jurisdiction for California Environmental Quality Act (CEQA) actions and project approval. Responsible Agencies are those agencies that have jurisdiction or authority over one or more aspects associated with the development of a proposed project and/or mitigation. Trustee Agencies are State agencies that have jurisdiction by law over natural resources affected by a proposed project.

The discretionary actions the City must consider as a part of the proposed project include:

- Approval of the use of a Class 32 Categorical Exemption
- Site Plan Review
- Approval of the CUP

CALIFORNIA ENVIRONMENTAL QUALITY ACT, SECTION 15332, CLASS 32 INFILL DEVELOPMENT EXEMPTION

Under *State CEQA Guidelines* Section 15332, a project characterized as infill development qualifies for a Class 32 CE under CEQA if the project (1) is consistent with the general plan and zoning ordinance; (2) occurs within city limits on a project site of no more than 5 acres substantially surrounded by urban uses; (3) is located on a site that does not have value as habitat for endangered, rare, or threatened species; (4) would not result in any significant impacts relating to traffic, noise, air quality, or water quality; and (5) is adequately served by all required utilities and services.

(1) The proposed project is consistent with the General Plan and Zoning Ordinance.

Implementation of the proposed project would not require amendments to an adopted planning document. The City's General Plan land use designation for the project site is Urban Neighborhood – Medium – Low (UN-30) uses. The UN-30 designation allows for uses including medium and medium-high density apartments, townhomes, garden- or motor-court homes, and neighborhood-serving commercial uses such as self-storage facilities. **Table A**, below, shows the proposed project's consistency with relevant policies in the City's General Plan.

Table A: General Plan Consistency Analysis

Policies	Consistency Analysis
Conservation Element	
Goal CN-1: Protect air resources, improve regional and local air quality, and minimize the impacts of climate change.	
Policy CN-1.4: Support new development that meets or exceeds standards for energy-efficient building design and site planning.	**Consistent.** The proposed project would develop a new self-storage building in compliance with the Building Energy Efficiency Standards, which include requirements in the Energy Code (Title 24, Part 6) and voluntary energy efficiency provisions in CALGreen (Title 24, Part 11). The proposed building would be heated when the temperature reaches approximately 55 degrees and cooled when the temperature reaches approximately 85 degrees, resulting in minimal use of the heating, ventilation, and air conditioning system. Additionally, motion detector lights would be used in self-storage areas to ensure lights are off while those areas are not in use. Therefore, the proposed project would meet standards for energy-efficient building design and site planning and would be consistent with **General Plan Policy CN-1.4.**
Policy CN-1.8: Promote use of alternative modes of transportation in the City of Santa Ana, including pedestrian, bicycling, public transportation, car sharing programs, and emerging technologies.	**Consistent.** The proposed project would include the development of four bicycle parking spaces and four electric-vehicle-capable parking spaces on-site. The proposed project would promote the use of alternative modes of transportation and emerging technologies including bicycling and using electric vehicles. Therefore, the proposed project would be consistent with **General Plan Policy CN-1.8.**
Policy CN-1.12: Encourage the use of low or zero-emission vehicles, bicycles, nonmotorized vehicles, and car-sharing programs by supporting new and existing development that includes sustainable infrastructure and strategies such as vehicle charging stations, drop-off areas for ride-sharing services, secure bicycle parking, and transportation demand management programs.	**Consistent.** As discussed above, the proposed project would include the development of four bicycle parking spaces and four electric-vehicle-capable parking spaces on-site. The proposed project would encourage the use of low- or zero-emission vehicles and bicycles and would be consistent with **General Plan Policy CN-1.12.**
Land Use Element	
Goal LU-2: Provide a balance of land uses that meet Santa Ana's diverse needs.	
Policy LU-2.6: Promote rehabilitation of properties and encourage increased levels of capital investment to create a safe and attractive environment.	**Consistent.** The proposed project would partially demolish two existing self-storage buildings and fully demolish one self-storage building and office building on-site. One new self-storage building would be constructed in place of the demolished buildings and would provide an upgraded building and amenities. Therefore, the proposed project would contribute to the rehabilitation of the project site and would be consistent with **General Plan Policy LU-2.6.**
Goal LU-3: Preserve and improve the character and integrity of existing neighborhoods and districts.	
Policy LU-3.4: Ensure that the scale and massing of new development is compatible and harmonious with the surrounding built environment.	**Consistent.** Land uses surrounding the project site include a mixture of industrial and residential uses. The proposed project would develop one self-storage building on a site that currently is developed with self-storage uses, which would be consistent with the character of the surrounding area. Although the proposed 91,558 sf self-storage building would be slightly taller than the other self-storage buildings on site, the building would be consistent with the scale of other buildings in the surrounding area, which are also 2 to 3 stories. Additionally, the proposed self-storage uses would continue to serve as a buffer between the industrial uses to the east and the residential uses to the west. Therefore, the proposed project would be consistent with **General Plan Policy LU-3.4.**

Source: Santa Ana General Plan (City of Santa Ana, 2023).
CALGreen = California Green Building Standards Code
City = City of Santa Ana
sf = square foot/feet

The project site is zoned for Specific Development-84 (SD-84) and Heavy Industrial (M2). Per the City's Transit Zoning Code[2], the project site is within the Industrial Overlay (I-OZ) Zone, which allows for land use activities and development permitted by the existing M1 and M2 zoning to continue until the property owner chooses to apply a new zone, as identified in the Transit Zoning Code. Properties within the I-OZ zone are required to comply with City Municipal Code Section 41, Article III, Divisions 18 and 19, as applicable. Per City Municipal Code Sections 41-489 and 41-427.5, self-storage uses are permitted on parcels zoned Light Industrial (M1) and M2with approval of a CUP.

As stated above, the proposed project is consistent with the applicable zones subject to approval of a CUP. The City's design review committee would condition the project design to be consistent with the site planning criteria and site development standards for the I-OZ and M2 zones, pursuant to the Transit Zoning Code and City Municipal Code. For example, Section 41-1394 of the City's Municipal Code requires that, for the first 900 storage units, 1 parking space be provided for each 150 units and for storage units in excess of 900, 1 parking space be provided for each 300 units. Additionally, two spaces are required for any on-site management unit. Further, Section 41-1342 requires three spaces be provided for each 1,000 square feet of gross floor area of office use. The proposed project would provide approximately 836 storage units, an on-site management unit, and a 1,147 sf office. Pursuant to the City's Municipal Code, the proposed project would be required to provide 11 parking spaces and the project proposes to provide 15 new parking spaces. Therefore, the proposed 17-parking-space supply, including the 2 existing parking spaces, would provide adequate parking to accommodate the proposed project's parking demand and the proposed project would be consistent with Section 41-1394 of the City Municipal Code. With approval of the CUP, the proposed project would be consistent with the City's zoning code and the I-OZ and M2 zoning designations.

(2) The proposed project would occur within city limits on a project site of no more than 5 acres and would be substantially surrounded by urban uses.

The project site at 1030 East 4th Street in Santa Ana is 3.48 acres, smaller than 5 acres. In its existing condition, the project site contains self-storage facilities, paved parking areas, and perimeter landscaping. The project site is surrounded by existing urban uses, including industrial and residential uses. The project site is immediately bounded to the north by 4th Street, to the southeast by industrial uses, and to the northwest by multifamily residential uses. Therefore, the proposed project would be within city limits on a project site of no more than 5 acres and is substantially surrounded by urban uses.

(3) The proposed project would be located on a site that does not have value as habitat for endangered, rare, or threatened species.

As shown on **Figure 2**, the project site includes 52,983 sf of existing self-storage uses (eight one-story buildings), which includes one rental office, landscaping adjacent to 4th Street, and an Extra Space Storage facility sign. The existing landscaped areas consisting of ornamental grass are

[2] City of Santa Ana. 2019a. Transit Zoning Code. Website: https://www.santa-ana.org/documents/table-of-contents-organization/ (accessed April 29, 2024).

along the northern perimeter of the project site along 4th Street. The site is surrounded on all sides by urban development.

The project site is currently developed; therefore, no special-status species are expected to occur on the project site in the existing condition because of the lack of suitable habitat. There are no trees on the project site; therefore, the proposed project would not include the removal and replacement of on-site trees. Similarly, the proposed project would not substantially reduce locally common wildlife populations, because no suitable habitat exists on site. The proposed project would not significantly affect sensitive biological resources given the amount of previous development that has taken place on the project site and in the vicinity. Project construction and operation would have no impacts either directly or through habitat modification to any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the United States Fish and Wildlife Service. Therefore, the project site does not have value as habitat for endangered, rare, or threatened species.

The proposed project, like all projects, would be subject to the provisions of the Migratory Bird Treaty Act (MBTA), which prohibits disturbing or destroying active nests, and California Fish and Game Code Section 3503, which protects nests and eggs. With compliance with existing regulations, potential impacts to nesting birds and trees would be avoided.

(4) The proposed project would not result in any significant impacts relating to traffic, noise, air quality, or water quality.

Traffic. A *Trip Generation and Vehicle Miles Traveled (VMT) Memorandum*[3] (**Attachment B**) was prepared to identify the trip generation impacts associated with the proposed project. The trip generation of the proposed project was calculated using trip rates from the Institute of Transportation Engineers' Trip Generation Manual, 11th Edition (2021) for Land Use Code 151 (Mini-Warehouse)[4]. **Table B**, below, summarizes the proposed project trip generation.

Table B: Project Trip Generation Summary

Land Use	Size	Unit	ADT	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Trip Rates									
Mini-Warehouse (Self-Storage)[1]		tsf	1.45	0.05	0.04	0.09	0.07	0.08	0.15
Existing Trip Generation									
Self-Storage	52.983	tsf	77	3	2	5	4	4	8
Project Trip Generation									
Self-Storage	127.857	tsf	185	7	5	12	9	10	19
Net Trip Generation (Project - Existing)			**108**	**4**	**3**	**7**	**5**	**6**	**11**

[3] LSA Associates, Inc. 2025a. *Trip Generation and Vehicle Miles Traveled (VMT) Memorandum*, Extra Space Storage 4th Street Project.

[4] Institute of Transportation Engineers (ITE). 2021. Trip Generation Manual, 11th Edition. Website: https://www.ite.org/ITEORG/assets/File/ITEJ%20Published/2021/ITE_ITE_October2021.pdf (accessed May 30, 2024).

[1] Trip rates referenced from the Institute of Transportation Engineers (ITE) *Trip Generation* Manual, 11th Edition (2021).
Land Use Code 151 – Mini-Warehouse
ADT = average daily trips
tsf = thousand square feet

As shown in **Table B**, the proposed project would generate a total of 185 daily trips, including 12 trips in the a.m. peak hour and 19 trips in the p.m. peak hour. In comparison to the trip generation for the existing self-storage uses on the project site, the net trip generation of the proposed project would be 108 daily trips, including 7 trips in the a.m. peak hour and 11 trips in the p.m. peak hour.

The City of Santa Ana Traffic Impact Study Guidelines[5] (City TIS Guidelines) provide VMT screening criteria for projects that are presumed to have less than significant impacts to the local transportation system and would therefore not be required to conduct a VMT analysis. Pursuant to the Section 2.1 (Project Screening) of the City TIS Guidelines, projects that generate fewer than 110 net daily trips have the potential to reduce VMT. This is consistent with the screening threshold for small projects identified in the Office of Planning and Research (OPR)[6] Technical Advisory on Evaluating Transportation Impacts in CEQA.[7] As shown in **Table B**, the project is anticipated to generate a total net difference of 108 daily trips, which is below the 110-net-daily-trip threshold established in the City TIS Guidelines and the screening criteria for small projects from the OPR Technical Advisory. Therefore, the proposed project is screened out from a VMT analysis and would result in a less than significant transportation impact.

Additionally, per the City TIS Guidelines, projects within Transit Priority Areas (TPAs) may be presumed to have a less than significant transportation impact. Based on Appendix A (Santa Ana Transit Priority Areas) of the City TIS Guidelines, the proposed project is within a TPA (in a 0.5-mile radius around the existing Santa Ana Regional Transportation Center). This particularly applies to employees and the manager on site. Therefore, given the proposed project's location within a TPA, the proposed project is screened out from a VMT analysis and would result in a less than significant transportation impact.

The project site is designated for Urban Neighborhood – Medium – Low (UN-30) uses per the City's General Plan. The proposed land use (self-storage use) is the same as the existing land use on site and it would continue to be consistent with the City's General Plan designation for the project site, as well as the Regional Transportation Plan/Sustainable Communities Strategy. In addition, the proposed project intends to provide service to, but not limited to, the local community. As mentioned above, the proposed project would result in an increase of 74,874 sf of self-storage use from existing conditions, which would increase its service capacity. As such,

[5] City of Santa Ana. 2019b. City of Santa Ana Traffic Impact Study Guidelines. Website: https://www.santa-ana.org/documents/traffic-vmt-impact-study-guidelines/ (accessed May 30, 2024).

[6] On July 1, 2024, the Office of Planning and Research (OPR) was renamed the Office of Land Use and Climate Innovation (LCI).

[7] OPR. 2018. Technical Advisory on Evaluating Transportation Impacts in CEQA. Website: https://lci.ca.gov/docs/20190122-743_Technical_Advisory.pdf (accessed February 10, 2025).

the proposed project may offer more opportunities for residents and employees to obtain the service closer to home and work, potentially reducing VMT.

Pedestrian facilities (sidewalks) run along 4th Street; however, no bicycle lanes exist along this street. The proposed project would not result in a significant increase in daily vehicle trips and would not alter existing pedestrian facilities during construction or operation. Additionally, the proposed project would not result in any physical changes to the surrounding roadway network, and therefore would not preclude the implementation of future bicycle facilities. Therefore, the proposed project would be consistent with the current use of the project site and would not conflict with a plan, ordinance, or policy addressing the circulation system.

The one existing driveway along 4th Street would continue to provide vehicular access to the project site. An emergency access only gate is provided on Standard Avenue and the proposed project would provide a minimum 20-foot-wide, paved, "fire lane" access roadway through the project site. Vehicular traffic to and from the project site would use the existing network of regional and local roadways that currently serve the area surrounding the project site. Additionally, design of the proposed project would be subject to the standards set forth in the City's Municipal Code and review and approval by the City. Construction of the proposed project would not result in temporary lane closures on surrounding roadways. Based on the temporary nature of the construction activities and trips and the low trip generation for daily operations, project vehicles would not create operational deficiencies or related hazards to the public roadways when accessing the project site.

Because the proposed project would generate a nominal number of new peak-hour trips, fewer than 110 net daily trips, and is within a TPA, the proposed project would not require a traffic study and is screened out from a VMT analysis, per the City TIS Guidelines. Therefore, the proposed project would have a less than significant impact on transportation.

Noise.

***Existing Noise Environment*.** The primary existing noise sources in the project area are transportation facilities including East 4th Street, East 1st Street, and the railway east of the project site. The project site is just outside of the 65 A-weighted decibel [dBA]) Community Noise Equivalent Level noise contour, based on the existing and future General Plan buildout noise contours in the City's General Plan Noise Element.

Construction Noise. Project construction would result in short-term noise and vibration. Maximum construction noise would be short-term, generally intermittent depending on the construction phase, and variable depending on receiver distance from the active construction zone. The duration of various types of construction noise and vibration would vary from 1 day to several weeks, depending on the phase of construction. The following describes the levels and types of impacts that may occur during construction.

The first type of short-term construction noise would result from transport of construction equipment and materials to the project site and construction worker commutes. These transportation activities would incrementally raise noise levels on roadways leading to the

site. The pieces of construction equipment would move on-site, remain for the duration of each construction phase, and would not add to the daily traffic volume in the project vicinity. Although there would be a relatively high single-event noise exposure potential causing intermittent noise nuisance (passing trucks at 50 feet would generate up to a maximum of 84 dBA), the effect on longer-term ambient noise levels would be small because the number of daily construction-related vehicle trips is small compared to existing daily traffic volume on 4th Street. The grading phase would generate the most trips out of all of the construction phases, at 34 trips per day based on the California Emissions Estimator Model (CalEEMod) (Version 2022.1) results contained in Attachment B of the *Air Quality Technical Memorandum* (**Attachment C**)[8]. Fourth Street would be used to access the project site and has an estimated existing average daily trips (ADT) of 12,016 near the project site based on City's GIS Open Data[9] for 2015. Based on the information above, construction-related traffic would increase noise by up to 0.01 dBA. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Therefore, short-term construction-related impacts associated with worker commutes and transport of construction equipment and material to the project site would be less than significant. No mitigation measures are required.

The second type of short-term noise impact is related to noise generated during demolition, site preparation, grading, building construction, paving, and architectural coating on the project site. Construction is undertaken in discrete steps, each of which has its own mix of equipment and its own noise characteristics. These various sequential phases would change the character of the noise generated on the project site. Therefore, the noise levels vary as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. **Table C** lists the maximum noise levels for typical construction equipment based on a distance of 50 feet between the construction equipment and a noise receptor.

Table C: Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Usage Factor[1] (%)	Maximum Noise Level (L_{max}) at 50 feet[2]
Backhoe	40	80
Compactor (ground)	20	80
Compressor	40	80
Crane	16	85
Dozer	40	85
Dump Truck	40	84
Excavator	40	85
Flatbed Truck	40	84
Man Lift (Forklift)	20	85
Front-End Loader	40	80
Generator	50	82

[8] LSA Associates, Inc. 2024b. *Air Quality Technical Memorandum*, Extra Space Storage 4th Street Project.

Table C: Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Usage Factor[1] (%)	Maximum Noise Level (L_{max}) at 50 feet[2]
Generator (<25KVA, VMS signs)	50	70
Grader	40	85
Jackhammer	20	85
Pavement Scarifier	20	85
Paver	50	85
Pickup Truck	40	55
Pneumatic Tools	50	85
Pump	50	77
Rock Drill	20	85
Roller	20	85
Scraper	40	85
Tractor	40	84
Welder/Torch	40	73

Source: Table 9.1, FHWA Highway Construction Noise Handbook (FHWA 2006).
Note: The noise levels reported in this table are rounded to the nearest whole number.
[1] Usage factor is the percentage of time during a construction noise operation that a piece of construction equipment is operating at full power.
[2] Maximum noise levels were developed based on Specification 721.560 from the CA/T program to be consistent with the City of Boston, Massachusetts, Noise Code for the "Big Dig" project.
CA/T = Central Artery/Tunnel
FHWA = Federal Highway Administration
L_{max} = maximum instantaneous noise level

Table D lists the anticipated construction equipment for each construction phase based on the CalEEMod (Version 2022.1) results contained in Attachment B of the *Air Quality Technical Memorandum* (**Attachment C**)[10]. **Table D** shows the combined noise level at 50 feet from all of the equipment in each phase and the equivalent continuous sound level (L_{eq}) for each equipment at 50 feet based on the quantity, the reference instantaneous maximum (L_{max}) noise level at 50 feet, and the acoustical usage factor. As shown in **Table D**, construction noise levels would reach up to 87.1 L_{eq} at a distance of 50 feet.

Table D: Summary of Construction Phase, Equipment, and Noise Levels

Construction Phase	Construction Equipment	Quantity	Reference Noise Level at 50 ft (dBA L_{max})	Acoustical Usage Factor[1] (%)	Noise Level at 50 ft (dBA L_{eq})	Combined Noise Level at 50 ft[2] (dBA L_{eq})
Demolition	Concrete Saw	1	90	20	83.0	86.5
	Dozer	1	85	40	81.0

Source: Compiled by LSA (2024).

[1] The acoustical usage factor is the percentage of time during a construction noise operation that a piece of construction equipment operates at full power.

[2] The combined noise level is calculated using the following formula: SPL = 10*log(10^(L_1/10) + 10^(L_2/10) … + 10^(L_n/10)). L_1, L_2,…L_n are the individual noise levels.

dBA = A-weighted decibels L_{eq} = equivalent continuous sound level SPL = sound pressure level
ft = foot/feet L_{max} = maximum instantaneous noise level

The closest residential property line is approximately 80 ft from the center of the project construction boundary. At a distance of 80 ft, noise would be attenuated by 4.1 dBA compared to the distance of 50 ft. Based on the above, the closest residential property line may be subject to short-term construction noise reaching 83 dBA L_{eq}[11] generated by construction activities in the project area. Although the project construction-related short-term noise levels have the potential to be higher than the ambient noise in the project vicinity, construction noise would cease once the project construction is completed. The proposed project would be constructed in compliance with the requirements of the City's Noise Ordinance, which prohibits construction activities before 7:00 a.m. or after 8:00 p.m. on Mondays through Saturdays and any time on Sundays and federal holidays. With incorporation of best business practices for noise reduction, the overall noise levels generated would be minimized, and construction noise impacts would be less than significant. No mitigation measures are required.

Construction Vibration. **Table E** provides reference peak particle velocity (PPV) values and vibration levels (in terms of vibration velocity in decibels) from typical construction vibration sources at 25 feet. Although there is currently limited information regarding vibration source levels specific to the equipment that would be used for the project, to provide a comparison of vibration levels expected for a project of this size, a large bulldozer would

[11] The noise level at 80 ft is calculated using the following formula: dBA_2= dBA_1 - 20*log(D_2/D_1). Where dBA_1 is the noise level at distance D_1 and dBA_2 is the noise level at distance D_2. The calculated noise level at 80 ft is also 87.1 dBA – 4.1 dBA = 83.0 dBA.

generate 0.089 PPV in inches per second (in/sec) of ground-borne vibration when measured at 25 feet, based on the

Table E: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV/L_V at 25 ft	
	PPV (in/sec)	L_V (VdB)[1]
Hoe Ram	0.089	87
Large Bulldozer	0.089	87
Caisson Drilling	0.089	87
Loaded Trucks	0.076	86
Jackhammer	0.035	79
Small Bulldozer	0.003	58

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
[1] RMS VdB re 1 µin/sec.
µin/sec = micro-inch(es) per second
ft = foot/feet
FTA = Federal Transit Administration
in/sec = inches per second
L_V = velocity in decibels
PPV = peak particle velocity
RMS = root-mean-square
VdB = vibration velocity in decibels

Federal Transit Administration's (FTA) *Transit Noise and Vibration Impact Assessment Manual* (2018). It would take a minimum of 0.2 PPV (in/sec) to cause any potential building damage to non-engineered timber and masonry buildings.

The distance to the nearest buildings for vibration impact analysis is measured between the nearest off-site buildings and the project construction boundary (assuming the construction equipment would only be used at or near the project setback line). The formula for vibration transmission is provided below:

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

The closest structures to the project construction activities are the existing off-site residential buildings to the west, which are approximately 20 ft from the project's construction boundary, and on-site storage buildings to the east and south (Buildings "C", "D", and "E"), which are approximately 20 feet from the project's construction boundary. Using the reference data from **Table E** and the equation above, a large bulldozer would generate a ground-borne vibration level of up to 0.124 PPV (in/sec) at the closest structures from the project construction boundary. This vibration level would not result in building damage, because the existing buildings are likely to have been constructed equivalent to or better than non-engineered timber and masonry and vibration levels would not exceed the FTA vibration damage threshold of 0.20 PPV (in/sec). Other building structures that surround the project site would experience lower vibration levels because they are farther away and are likely to have been constructed equivalent to or better than non-engineered timber and masonry. Therefore, construction vibration impacts during project construction would be less than significant. No mitigation measures are required.

Operational Traffic Noise Assessment. The proposed project is estimated to generate a net new ADT of 108 based on the proposed increase in square footage of the self-storage facilities and the *Trip Generation and VMT Memorandum* [12] (**Attachment B**). The ADT volumes along East 4th Street and East 1st Street in the project vicinity are 12,016 and 44,864, respectively, and were obtained from the City of Santa Ana's GIS Open Data[13] for 2015. Based on the information above, the project would increase traffic noise by up to 0.04 dBA. This noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Therefore, traffic noise impacts from project-related traffic on off-site sensitive receptors would be less than significant.

Stationary Noise Sources. It is expected that the proposed project would install heating, ventilation, and air conditioning equipment. It is expected that the equipment installed at the rooftop would be shielded and comply with the City's noise standards specified in Section 18-312. Through shielding and compliance with the City's noise standards, the project would result in less than significant impacts related to stationary noise sources. Impacts to the residential buildings to the west would be less than significant.

Air Quality. The *Air Quality Technical Memorandum* (Air Quality Analysis)[14] prepared for the proposed project is provided in **Attachment C**.

The project site is in Orange County and is within the jurisdiction of the South Coast Air Quality Management District (SCAQMD), which regulates air quality in the South Coast Air Basin (Basin). LSA used the California Emissions Estimator Model (CalEEMod) to calculate emissions from construction and operation of the proposed project.

Construction Emissions. During construction, short-term degradation of air quality may occur due to the release of particulate matter emissions (i.e., fugitive dust) generated by demolition, grading, building construction, paving, and other activities. Emissions from construction equipment are also anticipated and would include carbon monoxide (CO), nitrogen oxides (NO_X), volatile organic compounds (VOCs), directly emitted particulate matter less than 2.5 microns in size ($PM_{2.5}$) or particulate matter less than 10 microns in size (PM_{10}), and toxic air contaminants such as diesel exhaust particulate matter.

Project construction activities would include demolition, grading, site preparation, building construction, architectural coating, and paving activities. Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries.

14 LSA Associates, Inc. 2025b. *Air Quality Technical Memorandum*, Extra Space Storage 4th Street Project.

PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and amount of operating equipment. Larger dust particles would settle near the source, whereas fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. SCAQMD has established Rule 403: Fugitive Dust, which would require the applicant to implement measures that would reduce the amount of particulate matter generated during the construction period. The Rule 403 measures that were incorporated in this analysis include:

- Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving).
- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.
- Reduce traffic speeds on all unpaved roads to 15 miles per hour or less.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, sulfur oxides (SO_X), nitrogen oxides (NO_x), VOCs, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site. **Table F** summarizes the construction emissions estimated for the project using CalEEMod.

Table F: Short-Term Regional Construction Emissions

Construction Phase	Maximum Daily Regional Pollutant Emissions (lbs/day)							
	VOCs	NO_X	CO	SO_X	Fugitive PM_{10}	Exhaust PM_{10}	Fugitive $PM_{2.5}$	Exhaust $PM_{2.5}$
Demolition	0.4	5.2	18.9	<0.1	1.0	0.1	0.2	0.1
Site Preparation	0.7	3.4	36.0	0.1	8.5	0.1	4.1	0.1
Grading	0.3	2.2	16.0	<0.1	3.0	0.1	1.4	0.1
Building Construction	0.4	4.4	15.0	<0.1	0.6	<0.1	0.2	0.1
Paving	0.4	1.8	9.0	<0.1	0.2	<0.1	<0.1	<0.1
Architectural Coating	7.2	0.7	1.3	<0.1	0.1	<0.1	<0.1	<0.1
Peak Daily Emissions	**7.6**	**5.2**	**36.0**	**0.1**	**8.6**		**4.2**	
SCAQMD Threshold	**75.0**	**100.0**	**550.0**	**150.0**	**150.0**		**55.0**

Source: Compiled by LSA (February 2025).
Note: Some values may not appear to add correctly due to rounding. Maximum emissions of VOCs, NOx, and CO occurred during the overlapping building construction and architectural coating phases.

Table F: Short-Term Regional Construction Emissions

Construction Phase	Maximum Daily Regional Pollutant Emissions (lbs/day)							
	VOCs	NO_X	CO	SO_X	Fugitive PM_{10}	Exhaust PM_{10}	Fugitive $PM_{2.5}$	Exhaust $PM_{2.5}$

CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

As shown in **Table F**, construction emissions associated with the project would not exceed the daily SCAQMD thresholds for VOCs, NO_x, CO, SO_X, $PM_{2.5}$, or PM_{10} emissions. Therefore, construction of the proposed project would not result in emissions that would result in a cumulatively considerable net increase of any criteria pollutant for which the project is in nonattainment under an applicable National Ambient Air Quality Standards (NAAQS) or California Ambient Air Quality Standards (CAAQS).

Operational Impacts. Long-term air pollutant emissions associated with operation of the proposed project include emissions from area, energy, and mobile sources. Area-source emissions include architectural coatings, consumer products, and landscaping. Energy-source emissions result from activities in buildings that use natural gas.

Mobile-source emissions are from vehicle trips associated with operation of the project. Area-source emissions consist of direct sources of air emissions at the project site, including architectural coatings, consumer products, and use of landscape maintenance equipment.

PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other particulate matter emission processes. Gasoline-powered engines have small rates of particulate matter emissions compared with diesel-powered vehicles.

LSA calculated long-term operational emissions associated with the proposed project using CalEEMod. **Table G** provides the estimated existing emissions and the proposed project's estimated operational emissions.[15]

[15] This analysis evaluated the project emissions associated with 100,600 sf of self-storage uses and 122 net new ADT. The project's site plan has since been modified to include 91,558 sf of self-storage uses and 108 net new ADT. LSA reviewed this modification to the project site plan and determined that the modified square footage would not result in more severe air quality impacts than what is described within.

Table G: Project Operational Emissions

Emission Type	Pollutant Emissions (lbs/day)					
	VOCs	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Mobile Sources	0.3	0.2	2.5	<0.1	0.6	0.2
Area Sources	2.9	<0.1	4.0	<0.1	<0.1	<0.1
Energy Sources	<0.1	0.6	0.5	<0.1	0.1	0.1
Total Project Emissions	**3.2**	**0.8**	**7.0**	**<0.1**	**0.7**	**0.3**
SCAQMD Threshold	**55.0**	**55.0**	**550.0**	**150.0**	**150.0**	**55.0**
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (February 2025).
Note: Some values may not appear to add correctly due to rounding.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

The results shown in **Table G** indicate the proposed project would not exceed the significance criteria for daily VOCs, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions. Therefore, operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or State ambient air quality standard (NAAQS or CAAQS).

Long-Term Microscale (CO Hot-Spot) Analysis. Vehicular trips associated with the proposed project would contribute to congestion at intersections and along roadway segments in the vicinity of the project site. Localized air quality impacts would occur when emissions from vehicular traffic increase as a result of the proposed project. The primary mobile-source pollutant of local concern is CO, a direct function of vehicle idling time and, thus, of traffic flow conditions. CO transport is extremely limited; under normal meteorological conditions, it disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels, affecting local sensitive receptors (e.g., residents, schoolchildren, the elderly, and hospital patients).

Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable LOS or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project's effect on local CO levels.

An assessment of project-related impacts on localized ambient air quality requires that future ambient air quality levels be projected. Existing CO concentrations in the immediate project vicinity are not available. Ambient CO levels monitored at the 1630 West Pampas Lane station in Anaheim (the closest station to the project site), showed a highest recorded 1-hour concentration of 2.5 parts per million (ppm) (the State standard is 20 ppm) and a highest 8-hour concentration of 1.6 ppm (the State standard is 9 ppm) during the past 3 years.[16] The highest CO

[16] United States Environmental Protection Agency (EPA). 2023. Outdoor Air Quality Data.

concentrations would normally occur during peak traffic hours; hence, CO impacts calculated under peak traffic conditions represent a worst-case analysis.

The proposed project is expected to generate 108 net new ADT, with 7 net new trips in the a.m. peak hour and 11 net new trips in the p.m. peak hour. As the proposed project would not generate 100 or more a.m. or p.m. peak-hour trips, it did not meet the criteria for an evaluation of study area intersection or roadway segment levels of service. Therefore, given the extremely low level of CO concentrations in the project area and the lack of traffic impacts at any intersections, project-related vehicles are not expected to result in CO concentrations exceeding the State or federal CO standards. No CO hot spots would occur, and the project would not result in any project-related impacts on CO concentrations.

Health Risk on Nearby Sensitive Receptors. Sensitive receptors are defined as people who have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. As identified above, the closest sensitive receptors to the project site are the multifamily residences 36 feet west of the project site.

A construction Health Risk Assessment, which evaluates construction-period health risk to off-site receptors, was completed for the proposed project. **Table H**, below, identifies the results of the analysis assuming the use of Tier 4 Final construction equipment as proposed by the project.[17]

As shown in **Table H**, the maximum cancer risk for the residential receptor maximally exposed individual (MEI) would be 1.39 in 1 million, which would not exceed the SCAQMD cancer risk threshold of 10 in 1 million. The worker receptor risk would be lower at 0.12 in 1 million, and the school receptor risk would be 0.001 in 1 million, which would also not exceed the SCAQMD cancer risk thresholds. The total chronic hazard index would be 0.002 for the residential receptor MEI, 0.007 for the worker receptor MEI, and less than 0.001 for the school receptor MEI, which is below the threshold of 1.0. In addition, the total acute hazard index would be

[17] This analysis was conducted assuming that there would be 100,600 sf of building construction, whereas the proposed project now includes 91,558 sf of building construction. Therefore, this analysis provides a conservative estimate of the potential health risks related to construction activities associated with the proposed project.

Table H: Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in 1 Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.12	0.007	0
Residential Receptor Risk	1.39	0.002	0
School Sensitive Receptor	0.001	<0.001	0
SCAQMD Significance Threshold	**10 in 1 million**	**1.000**	**1**
Significant?	**No**	**No**	**No**

Source: LSA (February 2025).
SCAQMD = South Coast Air Quality Management District

nominal (0), which would also not exceed the threshold of 1.0. Therefore, construction of the proposed project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors, including the adjacent residences, to substantial pollutant concentrations. No significant health risk would occur from project construction emissions.

Once the proposed project is constructed, the proposed project would not be a source of substantial emissions. Therefore, implementation of the proposed project would not result in new sources of toxic air contaminants (TACs). Therefore, the project would not expose sensitive receptors to substantial levels of TACs.

Localized Impact Analysis. SCAQMD provides localized significance threshold (LST) screening tables for 25-, 50-, 100-, 200-, and 500-meter source-receptor distances. As identified above, the closest sensitive receptors to the project site are the multifamily residences immediately west of the project site at approximately 36 feet. In cases where receptors may be closer than 82 feet (25 meters), any distances within the 82-foot (25-meter) buffer zone can be used. Therefore, this LST analysis was completed to show the construction and operational impacts at 25 meters (82 feet) to the nearest sensitive receptors to the project site in Source Receptor Area 17 based on a 3.0-acre daily disturbance area for construction and a 3.5-acre project site for operation. **Tables I and J** show the results of the LST analysis during project construction and operation, respectively.

Table I: Project Localized Construction Emissions

Source	Pollutant Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
On-Site Emissions	4.3	35.2	7.7	3.9
Localized Significance Threshold	**138.0**	**894**	**8.3**	**5.0**
Significant?	**No**	**No**	**No**	**No**

Note: Source Receptor Area 17, based on a 3.5-acre operational project site, at a distance of 25 meters (82 feet) from the project boundary.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size

By design, the localized impact analysis only includes on-site sources; however, the CalEEMod outputs do not separate on-site and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions detailed in **Table J** assume all area- and energy-source emissions would occur on site, and 5 percent of the project-related new mobile sources (which is an estimate of the amount of project-related on-site vehicle and truck travel) would be on site. Considering the total trip length included in CalEEMod, the 5 percent assumption is conservative. **Table J** indicates the localized operational emissions would not exceed the LSTs at nearby residences. Therefore, the proposed operational activity would not result in a locally significant air quality impact.

As detailed in **Tables I and J**, the emission levels indicate that the project would not exceed SCAQMD LSTs during project construction or operation. The project's peak operational on-site NO_X emissions are approximately less than 1 pound per day. Due to the small size of the proposed project in relation to the overall Basin, the level of emissions is not sufficiently high to use a regional modeling program to correlate health effects on a Basin-wide level. On a regional scale, the quantity of emissions from the project is incrementally minor. Because the SCAQMD has not identified any other methods to quantify health impacts from small projects, and due to the size of the project, it is speculative to assign any specific health effects to small project-related emissions. However, based on this localized analysis, the proposed project would not expose sensitive receptors to substantial pollutant concentrations. Therefore, the project would not expose sensitive receptors to substantial levels of pollutant concentrations.

Odors. Heavy-duty equipment on the project site during construction would emit odors, primarily from equipment exhaust. However, the construction activity would cease after individual construction is completed. No other sources of objectionable odors have been identified for the proposed project.

SCAQMD Rule 402 regarding nuisances states, "A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property." The proposed uses are not anticipated to emit any objectionable odors. Therefore, the proposed

project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Based on the analysis presented above, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed SCAQMD thresholds of significance. Compliance with SCAQMD Rule 403: Fugitive Dust would further reduce construction dust impacts. The proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. The project would also be consistent with the 2022 AQMP and would also not result in objectionable odors affecting a substantial number of people.

Water Quality.

Construction Impacts. Pollutants of concern during construction include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. Each of these pollutants on its own or in combination with other pollutants can have a detrimental effect on water quality. During construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and sedimentation compared to existing conditions. In addition, chemicals, liquid products, petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste may be spilled or leaked, and they have the potential to be transported via storm water runoff into receiving waters.

Project construction would result in a total disturbed soil area of 1.23 acres. Projects that disturb greater than 1 acre of soil are subject to the regulatory requirements of the *State Water Resources Control Board (SWRCB) Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction and Land Disturbance Activities* (Order WQ 2022-0057-DWQ NPDES No. CAS000002) (Construction General Permit). Because the proposed project would disturb more than 1 acre, the Applicant would be required to obtain coverage under the Construction General Permit, which requires the preparation and implementation of a Stormwater Pollution Prevention Plan and best management practices (BMPs) including, but not limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment on site and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. Compliance with the standard requirements of the Construction General Permit would ensure that construction impacts related to surface water quality would be less than significant.

According to the *Geotechnical Site Evaluation* (**Attachment D**) prepared for the proposed project, groundwater was encountered during exploratory borings at depths at 46 feet below ground surface (bgs). Excavation during construction would be to a maximum depth of 8.5 feet bgs. Due to the depth of groundwater and the proposed depth of excavation, groundwater is not anticipated to be encountered during construction; therefore, groundwater dewatering would not be required during construction and construction-related impacts to groundwater would be less than significant.

Operational Impacts. Stormwater runoff from the project site currently flows south via a series of valley gutters to the southwest corner of the site and south of the property line where it enters the City's storm drainage system (Delhi Channel), where it ultimately

discharges to Newport Bay and the Pacific Ocean. Under the proposed conditions, stormwater runoff would be conveyed in a similar manner as existing conditions.

The proposed project would redevelop a 3.48-acre site with existing self-storage facilities and would result in the increase of 0.22 acre of impervious surface area. Proposed project operation has the potential to result in pollutants of concern including suspended soil/sediment, nutrients, pesticides, oil and grease, and trash and debris. Therefore, the proposed project is subject to the requirements of the California Regional Water Quality Control Board, Santa Ana Region*, Waste Discharge Requirements for The County of Orange, Orange County Flood Control District and The Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff* (Orange County MS4 Permit), Order No. R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062. The Orange County Flood Control District, the County of Orange, and incorporated cities, including the City of Santa Ana, are subject to the Orange County MS4 permit. The Orange County MS4 permit requires that a Water Quality Management Plan (WQMP) be prepared for priority new development and redevelopment projects. The proposed project is considered a priority redevelopment project because it replaces more than 5,000 sf of impervious surface on an already developed site.

In compliance with the Orange County MS4 Permit, a *Preliminary WQMP* (**Attachment E**) was prepared for the proposed project. WQMPs specify the Site Design, Source Control, Low Impact Development, and Treatment Control BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff. According to the Preliminary WQMP, stormwater runoff from the proposed project would be captured via a trench drain constructed at the eastern edge of the project site. Additionally, runoff from the proposed building would be collected in downspouts and routed to an underground retention basin for infiltration. Infiltration will be used for water quality treatment in compliance with the requirements of the Orange County MS4 permit. The remainder of the project site would continue to drain via the existing valley gutters to the southwest corner of the site and south of the property line and into the City's storm drainage system (Delhi Channel). In addition to the Orange County MS4, the proposed project would comply with City Municipal Code Section 18-156, Control Urban Runoff, which requires all new development and significant redevelopment to comply with Orange County's Drainage Area Management Plan and "any conditions and requirements established by city agencies related to the reduction or elimination of pollutants in storm water runoff from the project site". [18] Because the proposed project would implement the requirements of the applicable NPDES permit and associated BMPs and the City's Municipal Code, impacts to surface water quality would be less than significant.

Under existing conditions, the project site includes 0.87 acre of impervious surface area and the proposed project would result in the increase of 0.22 acre of impervious surface area.

[18] City of Santa Ana. 2024b. Municipal Code Section 18-156. Website: https://library.municode.com/ca/santa_ana/codes/code_of_ordinances?nodeId=PTIITHCO_CH18HESA_ARTIVWAPO_S18-161CODI (accessed May 20, 2024).

Impervious surfaces preclude groundwater infiltration and thereby interfere with groundwater recharge. The project site is within the boundaries of the Coastal Plain of Orange County Groundwater Basin.[19] According to the Preliminary WQMP, the majority of on-site soils are in Soil Group B and characterized by a fair to moderate infiltration rate. Additionally, stormwater runoff from the proposed project would be captured via a trench drain constructed at the eastern edge of the project site and runoff from the proposed building would be collected in downspouts and routed to an underground retention basin for infiltration. Therefore, the proposed project would not decrease groundwater supplies or interfere with groundwater recharge compared to existing conditions.

According to Federal Emergency Management Agency Flood Insurance Rate Map No. 06059CO276J (December 2009), the project site is not within a 100-year floodplain. Specifically, the project site is within Zone X, an area of minimal flood hazard (outside the 500-year floodplain). According to the California Department of Conservation,[20] the project site is not within a tsunami hazard zone. Therefore, no project-related impacts associated with flood flows or release of pollutants from inundation would occur.

The proposed project would comply with the Construction General Permit, the City's Municipal Code, and Orange County MS4 Permit, which require the implementation of BMPs to treat pollutants of concern and control the volume and velocity of stormwater runoff. In addition, the proposed project would not require groundwater dewatering and would not interfere with groundwater recharge. The proposed project would not conflict with the Water Quality Control Plan for the Santa Ana River Basin or sustainable groundwater management plans.

Overall, the proposed project would not result in impacts associated with water quality.

(5) The project site is adequately served by all required utilities and services.

The project site is served by all utilities and public services in the existing condition. Specific utilities and public service providers serving the project site include:

Water	City of Santa Ana Public Works Agency
Wastewater	City of Santa Ana Public Works Agency
Fire	Orange County Fire Authority
Police	Santa Ana Police Department
Schools	Santa Ana Unified School District
Landfill	Private waste haulers
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company

19 California Department of Water Resources. 2016. Groundwater Basin Boundary Assessment Tool. Website: https://gis.water.ca.gov/app/bbat/ (accessed May 20, 2024).

20 California Department of Conservation. 2020. Orange County Tsunami Hazard Areas. Website: https://www.conservation.ca.gov/cgs/tsunami/maps/orange (accessed May 20, 2024).

The project site is currently developed for qualified urban uses. As defined by Public Resources Code (PRC) Section 21072, a qualified urban use is any residential, commercial, public institutional, transit or transportation passenger facility, or retail use, or any combination of those uses. The proposed project would continue the existing self-storage use on the project site. As such, the project site is served by all utilities and service providers in the existing condition.

The City of Santa Ana Public Works Agency is the water provider for the project site. The City of Santa Ana Public Works Agency maintains and operates the sewer collection system, including storm drains, catch basins, and sewer lines. Water usage for operation of the proposed additions to the self-storage uses on site would be minimal, limited to irrigation for the existing landscaping and fire suppression systems. The new self-storage building would require similar water use as the existing buildings on site and project operation would not substantially increase water usage on the project site compared to existing conditions due to the use as a storage facility. Wastewater would only be generated from the office use and manager's apartment and fire suppression systems in the unlikely event of a fire. The proposed project would construct on-site water and wastewater distribution systems to serve the new building. The on-site systems would be constructed in compliance with the City's building and plumbing codes in its Municipal Code. The proposed on-site distribution systems would connect to the existing water and wastewater facilities off site. Extension of the water and wastewater infrastructure from the existing system within the project site would be a routine part of the construction process and would not result in additional environmental impacts beyond those evaluated for the construction of the project. The water and wastewater facility improvements would be limited to the project site, and connection points would remain as they exist now.

The City of Santa Ana contracts fire department services with the Orange County Fire Authority (OCFA), which fulfills both fire protection and emergency medical responsibilities. Santa Ana is within Operations Division 6, which includes 10 fire stations[21]. The closest fire station to the project site is OCFA–Santa Ana Fire Station number 72, at 1688 East 4th Street, 0.7 mile east of the project site. Because the proposed project would not change the existing use on site or require additional employees beyond what is required for existing operations, the OCFA and Fire Station 72 would adequately serve the proposed project. The proposed project would provide a minimum 20-foot-wide, paved "fire lane" access roadway through the project site and fire safety equipment and design elements such as fire hydrants, sprinkler systems, emergency access/fire lanes, fire extinguishers, and Knox boxes would be incorporated into the project design. The proposed project would satisfy all fire protection standards contained in the Uniform Fire and Building Codes.

Police protection services are provided to the city, including the project site, by the Santa Ana Police Department (SAPD). The SAPD includes multiple departments, including the Field Operations Bureau, composed of the patrol, operations, and traffic divisions. The SAPD central

[21] Orange County Fire Authority. 2023. "Member Cities". Website: https://ocfa.org/AboutUs/PartnerCities.aspx#:~:text=The%20Orange%20County%20Fire%20Authority,10%20stations%20throughout%20Orange%20County (accessed May 20, 2024).

police station is at 60 Civic Center Plaza, and the City's Westend substation is at 3750 West McFadden Avenue.[22] In addition, SAPD maintains the Santa Ana Regional Transportation Public Safety Office and Jose Vargas Community Affairs Office. The closest police station to the project site is at 60 Civic Center Plaza, 1.4 miles northwest of the project site. The proposed project would not decrease the officer-to-resident ratio in Santa Ana or trigger the need for new or physically altered police facilities. Because the proposed project would not change the existing use on site or require additional employees beyond what is required for existing operations, the SAPD would adequately serve the proposed project.

CALIFORNIA ENVIRONMENTAL QUALITY ACT CATEGORICAL EXEMPTIONS—EXCEPTIONS

State CEQA Guidelines Section 15300.2 provides exceptions to categorical exemptions that apply to specific types of projects. The exceptions to the CEs pursuant to Section 15300.2 of the *State CEQA Guidelines* are:

(a) Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located—a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

The proposed project does not rely on the specific classes of exemptions (3, 4, 5, 6, and 11) called out at the beginning of exception 15300.2(a). This exception does not apply to the proposed project.

Nonetheless, if this exception were applicable to a Class 32 exemption, the proposed project would not trigger this exception. The project site is at 1030 East 4th Street and is characterized by pavement, storage facilities, and landscaping associated with the existing on-site use. The project site is surrounded on all sides by urban development and is zoned Specific Development-84 (SD-84) and Heavy Industrial (M2) and designated for Urban Neighborhood-Medium-Low (UN-30 uses). Therefore, the project site is not particularly sensitive in terms of environmental resources, and there are no mapped environmentally sensitive habitat areas within or close to the project site. In addition, the proposed project, like all projects, would be subject to the provisions of the MBTA, which prohibits disturbing or destroying active nests, and California Fish and Game Code Section 3503, which protects nests and eggs. There are no trees on the project site, therefore, the proposed project would not include the removal and replacement of on-site trees. With compliance with existing regulations, potential impacts to nesting birds would be avoided.

[22] Santa Ana Police Department. 2023. "City of Santa Ana: Police". Website. https://www.santa-ana.org/departments/police (accessed May 20, 2024).

(b) <u>Cumulative Impact</u>. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place over time is significant.

The proposed project is an infill development project in an urban area. According to the Governor's Office of Planning and Research, the term "infill development" refers to building within unused and underutilized lands within existing development patterns, typically, but not exclusively, in urban areas.[23] The project site and surrounding areas are currently developed for qualified urban uses as defined by PRC Section 21072.

According to the City of Santa Ana's Major Development Activity Report[24], there are several active projects within the vicinity of the project site. The following active projects are within 1 mile of the project site: 3rd & Broadway Mixed-Use Development Project, 4th & Mortimer Mixed-Use Development Project, Cabrillo Crossing Townhomes Project, FX Residences Project, Innovative Housing Opportunities Mixed-Use Project, Santa Ana Lyon Towns Project, The Madison Project, and WISEPlace PSH Adaptive Reuse Development Project. These projects include development of residential buildings, multifamily apartments, and mixed-use buildings with commercial space. There are no active projects of the same type (commercial self-storage) in the vicinity of the project site.

Due to the project site's close proximity to the FX Residences Project, 4th & Mortimer Mixed-Use Development Project, and 3rd & Broadway Mixed-Use Development Project, the proposed project has the potential to contribute to cumulative impacts in relation to these projects. The remaining projects listed above are farther away, and intervening land uses would prohibit the proposed project from contributing to a significant cumulative impact. Therefore, the following discussion evaluates the proposed project's potential to result in cumulative impacts in conjunction with the FX Residences Project, 4th & Mortimer Mixed-Use Development Project, and 3rd & Broadway Mixed-Use Development Project.

The proposed project would contribute criteria pollutants to the area during project construction. Individual projects in the area may be under construction simultaneously with the proposed project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction could result in substantial short-term increases in air pollutants. However, each project would be required to comply with SCAQMD's standard construction measures. As of February 11, 2025, construction of the FX Residences Project was 95 percent complete, and therefore its construction is not anticipated to overlap with the proposed project.[25] Additionally, the Addenda to the City's

---

23 Governor's Office of Planning and Research. n.d. Infill Development. Website: https://opr.ca.gov/planning/land-use/infill-development/ (accessed May 20, 2024).

24 City of Santa Ana. 2024a. City of Santa Ana – Major Development Activity Report. Website: https://www.santa-ana.org/major-planning-projects-and-monthly-development-project-reports/ (accessed May 20, 2024).

25 City of Santa Ana. 2025. Major Development Projects, FX Residences. Website: https://www.santa-ana.org/fx-residences/ (accessed February 19, 2025).

Transit Zoning Code Environmental Impact Report prepared for the 4th & Mortimer Project[26] and 3rd & Broadway Mixed-Use Development Project[27] concluded that the air quality emissions associated with those projects would not exceed applicable SCAQMD thresholds. The proposed project's short-term construction CO, nitrogen dioxide, PM_{10}, and $PM_{2.5}$ emissions would not exceed the LSTs. Therefore, construction of the proposed project would have a less than significant impact with regard to regional and localized emissions and would not result in cumulatively considerable impacts.

Construction of the proposed project would result in short-term noise and vibration. Individual projects in the area may be under construction simultaneously with the proposed project. Depending on construction schedules and actual implementation of projects in the area, construction could result in substantial short-term increases in noise and vibration levels. However, each project would be required to comply with the City's Noise Ordinance. As discussed above, construction of the FX Residences Project is 95 percent complete and, therefore its construction is not anticipated to overlap with the proposed project. Additionally, environmental analyses completed for the 3rd & Broadway Mixed-Use Development Project and 4th & Mortimer Project concluded that construction noise impacts associated with those projects would be less than significant and vibration impacts would be potentially significant if construction takes place within 25 feet of a sensitive receptor. Due to the proposed project's distance to these projects, the proposed project would not contribute to cumulatively considerable vibration impacts. The proposed project's short-term construction noise and vibration levels would not exceed the vibration threshold considered safe for non-engineered timber and masonry buildings or the FTA's noise criteria. Additionally, the proposed project would be constructed in compliance with the requirements of the City's Noise Ordinance. Therefore, construction of the proposed project would have a less than significant impact with regard to noise and vibration and would not result in cumulatively considerable impacts.

Construction of the proposed project would result in short-term traffic in the area. Individual projects in the area may be under construction simultaneously with the proposed project. Depending on construction schedules and actual implementation of projects in the area, construction could result in substantial short-term increases in traffic. As discussed above, construction of the FX Residences Project is 95 percent complete, and therefore its construction is not anticipated to overlap with the proposed project. Additionally, environmental analyses completed for the 3rd & Broadway Mixed-Use Development Project and 4th & Mortimer Project concluded that construction traffic impacts associated with those projects would be less than significant. The proposed project would not result in a significant traffic impact during construction. Therefore, construction of the proposed project would have a less than significant impact with regard to traffic and would not result in cumulatively considerable impacts.

---

26 Rincon Consultants, Inc. 2020. 4th & Mortimer Project Environmental Impact Report Addendum, SCH#2006071100. October.

27 PlaceWorks. 2020. Addendum to the Santa Ana Transit Zoning Code (Specific Development No. 84 (SD 84A and SD 84B) EIR 3rd & Broadway Mixed-Use Development Project. September.

In summary, the proposed project is an infill development project in an urban area. Upon completion of construction, the project site would operate in a nearly identical manner as its current operation. The proposed project would rely on and can be accommodated by the existing road system, public services, and utilities. Impacts of the proposed project would not be cumulatively considerable in connection with the effects of past projects, the effects of other current projects, or the effects of probable future projects.

(c) Significant Effect. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

The Air Quality Analysis and the Traffic Analysis for the proposed project conclude that the proposed project would not result in a significant impact related to these topics. No amendments to an adopted land use or planning document would be required for implementation of the proposed project, and the proposed project would be consistent with the City's Municipal Code requirements. The proposed project would continue the existing self-storage use on-site and would operate in a nearly identical manner as its current operation. Given the urban nature of the project site and the compatibility of the proposed project with the character of the surrounding uses, there is no evidence to indicate that the proposed project would have a significant effect on the environment due to unusual circumstances.

(d) Scenic Highways. A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway. This does not apply to improvements which are required as mitigation by an adopted negative declaration or certified Environmental Impact Report.

The nearest eligible or State-designated scenic highway to the project site is State Route 91, which is 6.9 miles northeast of the project site.[28] Therefore, the proposed project does not have the potential to damage resources within a State-designated scenic highway. The project site is developed with a self-storage facility; none of the existing structures on the project site are more than 50 years old and, therefore, are not eligible for listing as historic resources. Additionally, the project site is not listed on the City of Santa Ana Register of Historic Properties[29] or mapped within a historic district on the City of Santa Ana Historic Resource Map.[30]

---

28 California Department of Transportation. 2018. California State Scenic Highway System Map. Website: https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways (accessed May 20, 2024).

29 City of Santa Ana. n.d. City of Santa Ana Register of Historic Properties. Website: https://www.santa-ana.org/historic-preservation/ (accessed May 20, 2024).

30 City of Santa Ana. 2023b. City of Santa Ana Historic Resource Map. Website: https://www.santa-ana.org/historic-preservation/ (accessed May 20, 2024).

(e) <u>Hazardous Waste Sites</u>. A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

A Phase 1 Environmental Site Assessment[31] (**Attachment F**) was prepared to identify the environmental conditions of the site. Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List (Cortese List) has been compiled by the California Environmental Protection Agency Hazardous Materials Data Management Program. The California Department of Toxic Substances Control (DTSC) compiles information from subsets of the following databases to make up the Cortese List:

1. The DTSC list of contaminated or potentially contaminated hazardous waste sites listed in the California Sites database (formerly known as ASPIS);
2. The California SWRCB listing of leaking underground storage tanks (LUSTs); and
3. The California Integrated Waste Management Board list of sanitary landfills that have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF; now Assembly Bill 3750).

The proposed project would not be on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.[32] The project site is not within 0.25 mile of any active cleanup sites.[33]

(f) <u>Historical Resources</u>. A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

The buildings on the project site were constructed in approximately 1995. The project site is developed with a self-storage facility; none of the existing structures on the project site are more than 50 years old and, therefore, are not eligible for listing as historic resources. Additionally, the project site is not listed on City of Santa Ana Register of Historic Properties,[34] and there are no recorded historic resources in the vicinity of the project site. According to the City of Santa Ana Historic Resource Map[35] and the City's General Plan Historic Preservation Element[36], the project site is not within a historic district or near a historic district. As the existing buildings on the project site are not 50 years old, they are not old enough to be

considered historical resources and are not eligible for listed at the federal, State, or local levels. Because of the age of the existing buildings, they do not need to be evaluated as historical resources pursuant to CEQA. As such, project construction and operation would have no impacts to "historical resources" pursuant to *State CEQA Guidelines* Section 5064.5.

CONCLUSION

In summary, the proposed project would not result in any specific or general exceptions to the use of a CE as detailed under *State CEQA Guidelines* Section 15332. The proposed project would not cause any significant impacts to traffic, noise, air quality, or water quality. The project site does not have value as habitat for endangered, rare, or threatened species. The proposed project would not result in damage to a scenic resource within a highway officially designated as a State Scenic Highway. The project site is not on any list compiled pursuant to Section 65962.5 of the Government Code. Furthermore, no unusual circumstances or potential cumulative impacts would occur that may reasonably create an environmental impact. Therefore, the proposed project is exempt from the provisions of CEQA as specified by the *State CEQA Guidelines* identified above.

SUBJECT: Trip Generation and Vehicle Miles Traveled Assessment for the Extra Space Storage 4th Street Project, Santa Ana, California (LSA Project No. 20241677)

LSA has prepared this trip generation and vehicle miles traveled (VMT) assessment for the proposed Extra Space Storage project at 1030 East 4th Street in Santa Ana.

The purpose of this assessment is to identify the proposed project trip generation and determine whether the project requires a traffic impact study and meets the VMT screening criteria of the *City of Santa Ana Traffic Impact Study Guidelines* (dated September 2019) (City TIS Guidelines).

EXISTING PROJECT SITE

As shown in Figure 1 (all figures provided in Attachment A), Regional Location, the project site is at 1030 East 4th Street in Santa Ana. The 3.48-acre project site is east of Standard Avenue between 1st and 4th Street in the northeastern part of the city. The project site consists of Assessor's Parcel Number 398-461-18. The project site is currently developed with 52,983 square-feet (sf) of self-storage uses (eight one-story buildings), including an 1,841 sf one-story office building, an Extra Space Storage facility sign, and landscaping.

The project site serves as a buffer between residential and industrial uses. The project site is immediately bounded to the north by 4th Street, to the southeast by industrial uses, and to the northwest by multifamily residential uses. Vehicular access to the project site is currently provided by one full-access driveway on 4th Street.

PROPOSED PROJECT

The proposed project would partially demolish two self-storage buildings: approximately 753 sf of the easternmost building and 7,796 sf of the building in the center of the project site. The proposed project would also fully demolish the 1,841 sf office and existing manager's apartment along 4th Street and a 6,294 sf self-storage building in the northwestern corner of the project site. All other existing uses on site including the other self-storage buildings (36,299 sf in total) would remain. The proposed project would replace the demolished buildings with a three story, 91,558 sf, self-storage building that would include a manager's apartment and a rental office. Under post-development conditions, the total self-storage square footage on site (including the existing 36,299 sf of self-storage uses to remain) would be 127,857 sf. Vehicular access to the project site would continue to be provided via the one existing driveway along 4th Street.

Figure 2, Conceptual Site Plan, provides an overview of the proposed site plan, including the locations of the existing buildings to remain, the proposed building and parking stalls, vehicular access, landscaping, and a trash enclosure. No changes to the office hours of operation or storage gate hours are proposed. Office hours are currently Monday through Saturday, from 9:30 a.m. to 6:00 p.m. (closed on Sundays). Storage gate hours are currently Monday through Sunday, from 6:00 a.m. to 8:00 p.m.

TRIP GENERATION ESTIMATE

The trip generation of the existing storage facility (52,983 sf) was calculated using trip rates from the Institute of Transportation Engineers' Trip Generation Manual, 11th Edition (2021) for Land Use Code 151 (Mini-Warehouse). According to the ITE manual, a mini-warehouse is a building in which a number of storage units or vaults are rented for the storage of goods. They are typically referred to as "self-storage" facilities. Each unit is physically separated from other units, and access is usually provided through an overhead door or other common access point. Table A (attached) summarizes the project trip generation using the ITE trip rates for the existing self-storage use. It should be noted that the manager's apartment is both existing and proposed and would not generate new trips.

As shown in Table A (Attachment B), the existing site (including the manager's apartment) generates 77 average daily trips (ADT), including 5 a.m. peak hour trips and 8 p.m. peak hour trips.

The proposed project will include a total of 127,857 sf self-storage use and the manager's apartment (an increase of 74,874 sf from existing). As shown in Table A, the buildout of the site would generate a total of 185 ADT, including 12 a.m. peak-hour and 19 p.m. peak-hour trips.

The net project trip generation (Project – Existing) is 108 ADT, including 7 a.m. peak-hour and 11 p.m. peak-hour trips.

VEHICLE MILES TRAVELED SCREENING ANALYSIS

On December 28, 2018, the California Office of Administrative Law cleared the revised California Environmental Quality Act (CEQA) Guidelines for use. Among the changes to the guidelines was the removal of vehicle delay and level of service (LOS) as the sole basis of determining CEQA transportation impacts. With implementation of the adopted *State CEQA Guidelines*, transportation impacts are to be evaluated based on a project's effect on VMT. On June 18, 2019, the City adopted its VMT thresholds of significance for transportation impact analysis under CEQA, which were then incorporated into the City TIS Guidelines (dated September 2019).

Pursuant to the Section 2.1 (Project Screening) of the City TIS Guidelines, projects that generate less than 110 net daily trips have the potential to reduce VMT. This is consistent with the screening threshold for small projects identified in the Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA (State of California, December 2018). Table A summarizes the Trip Generation for the proposed project. As shown in Table A, the project is anticipated to generate a total net difference of 108 daily trips, which is below the 110 net daily trip threshold established in the City TIS Guidelines and the screening criteria for small projects from the

OPR Technical Advisory. Therefore, the proposed project is screened out from a VMT analysis and results in a less than significant transportation impact.

Additionally, per City TIS Guidelines, projects within Transit Priority Areas (TPAs) may be presumed to have a less than significant transportation impact. Based on Appendix A (Santa Ana Transit Priority Areas) of the City TIS Guidelines, provided in Attachment C, the proposed project is within a TPA (in a 0.5-mile radius around the existing Santa Ana Metrolink Station). This particularly applies to employees and the manager on site. Therefore, the proposed project is screened out from a VMT analysis and results in a less than significant transportation impact.

The project site is designated for Urban Neighborhood – Medium – Low (UN-30) uses per the City's General Plan. The proposed land use (self-storage use) is the same as the existing land use on site and it would continue to be consistent with the General Plan designation, as well as Regional Transportation Plan/Sustainable Communities Strategy. In addition, the proposed project intends to provide service to, but not limited to, the local community. As mentioned above, the proposed project results in an increase of 74,874 sf of self-storage use from existing, which will increase its service capacity. As such, the proposed project might offer more opportunities for residents and employees to obtain the service closer to home and work, potentially reducing VMT.

CONCLUSIONS

The proposed project is anticipated to generate an additional 108 ADT, including 7 a.m. peak-hour and 11 p.m. peak-hour trips compared to the existing uses on site. Because the proposed project generates a nominal number of new peak-hour trips and less than 110 net daily trips, and is within TPAs, it would not require a traffic study and is screened out from a VMT analysis, per the City TIS Guidelines. Therefore, the project is presumed to have a less than significant transportation impact.

If you have any questions, please contact me at (949) 553-0666.

SUBJECT: Air Quality Technical Memorandum for the proposed Extra Space Storage 4th Street Project in Santa Ana, California

INTRODUCTION

This Air Quality Technical Memorandum evaluates the impacts associated with construction and operation of the proposed Extra Space Storage 4th Street Project (project) in Santa Ana, California. This analysis was prepared using methods and assumptions recommended in the air quality impact assessment guidelines of the South Coast Air Quality Management District (SCAQMD) in its *CEQA Air Quality Handbook* (1993)[1] and associated updates. This analysis includes an assessment of criteria pollutant emissions, an assessment of carbon monoxide (CO) hot-spot impacts, and an assessment of the potential health risks related to the proposed project activities to sensitive receptors.

PROJECT LOCATION AND DESCRIPTION

The 3.48-acre project site is at 1030 East 4th Street in Santa Ana, Orange County, California. The project site consists of Assessor's Parcel Number 398-461-18. The existing project site is currently developed with 52,983 square feet (sq ft) of self-storage uses (total of eight one-story buildings), including an 1,841 sq ft one-story office building and perimeter landscaping. Vehicular access to the project site is currently provided via a single driveway along 4th Street. The regional project location is shown in Figure 1 (attached).

Development of the proposed project would require the demolition of the existing office and one self-storage building and the partial demolition of two self-storage buildings, for the combined total of 16,684 sq ft. All other existing uses on site, including the other self-storage buildings (approximately 36,299 sq ft in total) would remain. The proposed project would replace the demolished buildings with a self-storage building of approximately 91,558 sq ft, including a manager's apartment and rental office. Additionally, the proposed project would provide 15 parking stalls, including four electric vehicle (EV) capable stalls, and two manager's apartment stalls. Under post-development conditions, the total self-storage square footage on site (including the existing

[1] South Coast Air Quality Management District (SCAQMD). 1993. *CEQA Air Quality Handbook*. Website: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993) (accessed June 2024).

36,299 sq ft of self-storage uses to remain) would be 127,857 sq ft. The proposed project conceptual site plan is shown in Figure 2 (attached). Office and customer access hours would remain the same as with existing conditions. Office hours are currently Mondays through Saturdays, from 9:30 a.m. to 6:00 p.m. (closed on Sundays). Customer access hours are currently Mondays through Sundays, from 6:00 a.m. to 8:00 p.m. The proposed project would also not require any additional employees on site compared to existing operations. Once operational, the proposed project is estimated to generate 108 net new average daily trips (ADT).[2] Furthermore, the proposed project site is currently zoned for Specific Development-84 (SD-84) and Heavy Industrial (M2). The project site is also within the Industrial Overlay (I-OZ) Zone which allows for land use activity and development permitted by existing Light Industrial (M1) and M2 zoning. Per the City's Municipal Code Section 41-489 and 41-472.5, the proposed project would require the approval of a Conditional Use Permit (CUP) to operate on parcels zoned M1 and M2.

Construction would include demolition, site preparation, grading, building construction, paving, and architectural coating activities. Construction of the proposed project is anticipated to commence in November 2025 and extend over a period of approximately 14 months. Based on the preliminary grading plans, the proposed project would require approximately 280 cubic yards (cy) of cut and 720 cy of fill, resulting in a total of 440 cy to be imported on site. Demolition, grading, and building activities would involve the use of standard earthmoving equipment such as large excavators, cranes, and other related equipment. The proposed project would utilize construction equipment that meets the California Air Resources Board (CARB) In-Use Off-Road Diesel-Fueled Fleets Regulation emission standards of Tier 4 Final.

EXISTING LAND USES IN THE PROJECT AREA

For the purposes of this analysis, sensitive receptors are areas of the population that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include residences, schools, daycare centers, hospitals, parks, and similar uses that are sensitive to air quality. Impacts on sensitive receptors are of particular concern because those receptors are the population most vulnerable to the effects of air pollution. The project site is surrounded by a mixture of residential and commercial uses. The project site is immediately bounded to the north by 4th Street, to the southeast by industrial uses, and to the northwest by multifamily residential uses. The closest sensitive receptors to the project site are the multifamily residences located immediately west of the project site at approximately 36 feet.

ENVIRONMENTAL SETTING

Air quality is primarily a function of local climate, local sources of air pollution, and regional pollution transport. The amount of a given pollutant in the atmosphere is determined by the amount of the pollutant released and the atmosphere's ability to transport and dilute the pollutant. The major determinants of transport and dilution are wind, atmospheric stability, terrain, and, for photochemical pollutants, sunshine.

A region's topographic features have a direct correlation with air pollution flow and are therefore used to determine the boundary of air basins. The proposed project is located in Santa Ana, which is

[2] LSA Associates, Inc. (LSA). 2025. *Project Trip Generation Summary,* Table A. February.

in Orange County and is within the jurisdiction of SCAQMD, which regulates air quality in the South Coast Air Basin (Basin).

The Basin comprises approximately 10,000 square miles and covers all of Orange County and the urban parts of Los Angeles, Riverside, and San Bernardino Counties. The Basin is on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east, forming the inland perimeter.

Both State and federal governments have established health-based ambient air quality standards for six criteria air pollutants: CO, ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead, and suspended particulate matter. In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Two criteria pollutants, O_3 and NO_2, are considered regional pollutants because they (or their precursors) affect air quality on a regional scale. Pollutants such as CO, SO_2, and lead are considered local pollutants that tend to accumulate in the air locally.

Air quality monitoring stations are located throughout the nation and are maintained by the local air districts and State air quality regulating agencies. Data collected at permanent monitoring stations are used by the United States Environmental Protection Agency (USEPA) to identify regions as "attainment" or "nonattainment" depending on whether the regions meet the requirements stated in the applicable National Ambient Air Quality Standards (NAAQS). Nonattainment areas are imposed with additional restrictions as required by the USEPA. In addition, different classifications of attainment (e.g., marginal, moderate, serious, severe, and extreme) are used to classify each air basin in the State on a pollutant-by-pollutant basis. The classifications are used as a foundation to create air quality management strategies to improve air quality and comply with the NAAQS. As shown in Table A, the Basin is designated as nonattainment by federal standards for O_3 and particulate matter less than 2.5 microns in diameter ($PM_{2.5}$) and nonattainment by State standards for O_3, particulate matter less than 10 microns in diameter (PM_{10}), and $PM_{2.5}$.

Table A: Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
O_3 1-hour	Nonattainment	N/A
O_3 8-hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Attainment/Maintenance
$PM_{2.5}$	Nonattainment	Nonattainment
CO	Attainment	Attainment/Maintenance
NO_2	Attainment	Unclassified/Attainment (1-hour) Attainment/Maintenance (Annual)
SO_2	Attainment	Unclassified/Attainment
Lead	Nonattainment[1]	Nonttainment[1]
All Others	Attainment/Unclassified	Attainment/Unclassified

NO_2 = nitrogen dioxide
O_3 = ozone
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
SCAQMD = South Coast Air Quality Management District
SO_2 = sulfur dioxide
USEPA = United States Environmental Protection Agency

O_3 levels, as measured by peak concentrations and the number of days over the State 1-hour standard, have declined substantially as a result of aggressive programs by SCAQMD and other regional, State, and federal agencies. The reduction of peak concentrations represents progress in improving public health; however, the Basin still exceeds the State standard for 1-hour and 8-hour O_3 levels. The USEPA lowered the 1997 0.80 parts per million (ppm) national 8-hour ozone standard to 0.75 ppm in 2008 and then to 0.70 ppm on October 1, 2015. The Basin is classified as nonattainment for the 1-hour and 8-hour ozone standards at the State and federal level. From 2021 to 2023, the 1630 W. Pampas Lane station in Anaheim (the closest monitoring station to the project site) recorded the following exceedances of the State and federal 1-hour and 8-hour O_3 standards[3]:

- The federal 8-hour O_3 standard had no exceedances in 2021, 1 in 2022, and 2 in 2023.
- The State 8-hour O_3 standard had no exceedances in 2021, 1 in 2022, and an unknown number of exceedances in 2023.
- The federal 1-hour O_3 standard had no exceedances in the three-year period.
- The State 1-hour O_3 standard had no exceedances in 2021, 1 in 2022, and an unknown number of exceedances in 2023.

National and State standards have also been established for $PM_{2.5}$ over 24-hour and yearly averaging periods. $PM_{2.5}$, because of the small size of individual particles, can be especially harmful to human health. $PM_{2.5}$ is emitted by common combustion sources such as cars, trucks, buses, and power plants, in addition to ground-disturbing activities. On December 17, 2006, the USEPA strengthened the 24-hour $PM_{2.5}$ NAAQS from 65 micrograms per cubic meter ($\mu g/m^3$) to 35 $\mu g/m^3$, and the Basin was subsequently designated "moderate" nonattainment for 2006 24-hour $PM_{2.5}$ NAAQS on December 14, 2009. On February 7, 2024, the USEPA strengthened the NAAQS for $PM_{2.5}$ by revising the primary (health-based) annual standard from 12.0 $\mu g/m^3$ to 9.0 $\mu g/m^3$; however, a new attainment designation has not been issued. The Basin is also considered a nonattainment area for the $PM_{2.5}$ standard at the State level. From 2021 to 2023, the 1630 W. Pampas Lane station (the closest station to the project site monitoring $PM_{2.5}$) recorded the following exceedances of the federal 24-hour $PM_{2.5}$:

- The federal 24-hour $PM_{2.5}$ standard had 10 exceedances in 2021, and no exceedances in 2022 and 2023.

The Basin is classified as a PM_{10} nonattainment area at the State level and was redesignated from serious nonattainment to attainment of the federal PM_{10} standard on July 26, 2013. Because the

[3] California Air Resources Board (CARB). 2023. *iADAM: Air Quality Data Statistics.* Website: https://www.arb.ca.gov/adam/index.html (accessed June 2024)

Basin was redesignated from nonattainment to attainment, a PM_{10} maintenance plan was adopted in 2013 and is required to be updated every 10 years. From 2021 to 2023, the 1630 W. Pampas Lane station in Anaheim (the closest monitoring station to the project site monitoring PM_{10}) recorded no exceedances of the federal PM_{10} standard.

- The State 24-hour PM_{10} standard had 1 exceedance in 2021 and 2022 and an unknown number of exceedances in 2023.

All areas of the Basin have continued to remain below the federal CO standards (35 ppm 1-hour and 9 ppm 8-hour standards) since 2003. The USEPA redesignated the Basin to attainment of the federal CO standards effective June 11, 2017. The Basin is also well below the State CO standards (20 ppm 1-hour CO and 9 ppm 8-hour CO).

REGULATORY SETTING

Applicable federal, State, regional, and local air quality regulations are discussed below.

Federal Regulations

The 1970 federal Clean Air Act (CAA) authorized the establishment of national health-based air quality standards and set deadlines for their attainment. The CAA Amendments of 1990 changed deadlines for attaining national standards as well as the remedial actions required for areas of the nation that exceed the standards. Under the CAA, State and local agencies in areas that exceed the national standards are required to develop State Implementation Plans to demonstrate how they will achieve the national standards by specified dates.

State Regulations

In 1988, the California Clean Air Act (CCAA) required that all air districts in the State endeavor to achieve and maintain California Ambient Air Quality Standards (CAAQS) for CO, O_3, SO_2, and NO_2 by the earliest practical date. The CCAA provides districts with the authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and areawide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

The California Air Resources Board (CARB) is the State's "clean air agency." CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to toxic air contaminants (TACs), and oversee compliance with air pollution rules and regulations.

Regional Regulations

The proposed project would be required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 403 requires that fugitive dust be controlled with best available control measures, so the presence of such dust does not remain visible in the atmosphere beyond the property line of the emissions source. In addition, SCAQMD Rule 403 requires

implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. SCAQMD Rule 1113 limits the volatile organic compound (VOC) content of architectural coatings. Applicable dust suppression techniques from SCAQMD Rule 403 and low VOC content in paints under SCAQMD Rule 1113 are summarized below. Implementation of these dust suppression techniques can reduce the fugitive dust generation (and thus the particulate matter less than 10 microns in size [PM_{10}] component). Compliance with these rules would reduce impacts on nearby sensitive receptors.

South Coast Air Quality Management District Rule 403 Measures

- Water active sites at least two times daily (locations where grading is to occur will be thoroughly watered prior to earthmoving).
- All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).
- Traffic speeds on all unpaved roads shall be reduced to 15 miles per hour or less.

South Coast Air Quality Management District Rule 1113 Measures

SCAQMD Rule 1113 governs the sale, use, and manufacture of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction and operation of the proposed project. Therefore, all paints and solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1113.

Local Regulations

City of Santa Ana General Plan

The City of Santa Ana (City) addresses air quality in the Conservation Element of its General Plan.[4] The Conservation Element includes goals and policies that work to protect air resources, improve regional and local air quality, and minimize the impact of climate change. The following policies from the Conservation Element are applicable to the proposed project:

- **Policy CN-1.1: Regional Planning Efforts.** Coordinate air quality planning efforts with local and regional agencies to meet or exceed State and Federal ambient air quality standards in order to educate the community on and protect all residents from the health effects of air pollution.
- **Policy CN-1.4: Development Standards.** Support new development that meets or exceeds standards for energy-efficient building design and site planning.
- **Policy CN-1.5: Sensitive Receptor Decisions**. Study the impacts of stationary and non-stationary emission sources on existing and proposed sensitive uses and opportunities to minimize health and safety risks. Develop and adopt new regulations avoiding the siting of facilities that

[4] City of Santa Ana. 2022. *City of Santa Ana General Plan, Conservation Element*. April. Website: https://general-plan-santa-ana-ca.proudcity.com/conservation-element/ (accessed June 2024).

potentially emit increased pollution near sensitive receptors within environmental justice area boundaries.

- **Policy CN-1.8: Promote Alternative Transportation.** Promote use of alternate modes of transportation in the City of Santa Ana, including pedestrian, bicycling, public transportation, car sharing programs, and emerging technologies.

- **Policy CN-1.12: Sustainable Infrastructure.** Encourage the use of low or zero emission vehicles, bicycles, nonmotorized vehicles, and car-sharing programs by supporting new and existing development that includes sustainable infrastructure and strategies such as vehicle charging stations, drop-off areas for ride-sharing services, secure bicycle parking, and transportation demand management programs.

METHODOLOGY

Construction Emissions

Construction activities can generate a substantial amount of air pollution. Construction activities are considered temporary; however, short-term impacts can contribute to exceedances of air quality standards. Construction activities include demolition, site preparation, earthmoving, and general construction. The emissions generated from these common construction activities include fugitive dust from soil disturbance; fuel combustion from mobile heavy-duty, diesel-, and gasoline-powered equipment and portable auxiliary equipment; and worker commute trips.

The California Emissions Estimator Model version 2022.1 (CalEEMod) computer program was used to calculate emissions from on-site construction equipment and from worker and vehicle trips to the site. Construction of the proposed project is anticipated to commence in November 2025 and extend over a period of approximately 14 months, which is included in CalEEmod. To be conservative, this analysis assumes construction overlap between the building construction, paving, and architectural coating phases, which was also included in CalEEMod. The proposed project would include a total of 16,684 sq ft of demolition, which include the existing office building, one self-storage building, and the partial demolition of two self-storage buildings. Based on the preliminary grading plans, the proposed project would require approximately 280 cy of cut and 720 cy of fill, resulting in a net total of 440 cy to be imported on site, which was included in CalEEMod. This analysis assumes the use of Tier 4 Final construction equipment and that the proposed project would comply with SCAQMD Rule 403 measures, which were also included in CalEEMod. All other construction details are not yet known; therefore, default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used.

Construction Health Risk Assessment

A construction health risk assessment (HRA), which evaluates construction-period health risk to off-site receptors, was performed for the proposed project, and the analysis is presented below. To estimate the potential cancer risk associated with construction of the proposed project from equipment exhaust (including diesel particulate matter), a dispersion model was used to translate an emission rate from the source location to a concentration at the receptor location of interest (i.e., a nearby residence and worksites). Dispersion modeling varies from a simpler, more

conservative screening-level analysis to a more complex and refined detailed analysis. This refined assessment was conducted using the CARB exposure methodology with the air dispersion modeling performed using the USEPA dispersion model AERMOD. The model provides a detailed estimate of exhaust concentrations based on site and source geometry, source emissions strength, distance from the source to the receptor, and meteorological data.

For the purposes of an HRA, emissions are analyzed for acute health impacts, chronic, and carcinogenic health impacts. A multipathway assessment has been conducted to evaluate the project's emissions during construction following the modeling techniques recommended in the OEHHA *Air Toxic Hot Spots Program Risk Assessment Guidelines*.[5] The analysis herein has been conducted in accordance with SCAQMD requirements for HRAs. CalEEMod was used to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site, which was included in AERMOD. This analysis utilizes a construction start date of November 2025 and a 14-month construction period, consistent with CalEEMod inputs. In addition, this HRA has been conducted using two models: (1) the USEPA AERMOD dispersion model to determine how the TACs would move through the atmosphere after release from sources both on site and along the truck routes; and (2) the CARB's HARP model to translate the pollutant concentrations from AERMOD into individual health risks at the nearby sensitive receptor locations.

Model Assumptions

In order to assess the dispersion of emissions associated with the project, air dispersion modeling was performed using AERMOD. The model is approved by the USEPA when estimating the air quality impacts associated with point and fugitive sources in simple and complex terrain. The model was used to calculate the annual average pollutant concentrations associated with each emitting source. For the purpose of this analysis, each year of construction was modeled separately and the impact to each receptor was summed to estimate the total exposure from construction emissions. Additionally, the starting age is increased for each year of construction. Construction area parameters were based on the project area (in square meters) and a height source of approximately 3 meters.

The AERMOD model requires additional input parameters, including local meteorology. Due to the model's sensitivity to individual parameters (e.g., wind speed, temperature, and direction), the USEPA recommends meteorological data used as input into dispersion models be selected on the basis of relative spatial and temporal conditions that exist in the area of concern. As such, 5 years of meteorological data from SCAQMD's John Wayne International Airport Meteorological Station (the nearest available station) was used to represent local weather conditions and prevailing winds.

[5] OEHHA. 2015. op cit.

CARB's HARP2 model is a tool that assists with the programmatic requirements of the Air Toxics "Hot Spots" Program (AB 2588). HARP2 was used to translate the TAC concentrations from AERMOD into long-term carcinogenic and chronic, and short-term acute health risk levels following the guidance in the SCAQMD and OEHHA risk assessment guidelines. These guidelines specify a minimum set of TAC pathways and HARP2 modeling options for the carcinogenic assessment. To estimate chronic noncancer risks at residential receptors, the "RMP-Derived Method" risk-calculation option was used. Following the OEHHA guidance, an 8-hour chronic noncancer risk was calculated for residential receptors because the project would operate more than 8 hours per day and 5 days per week.

Discrete variants for daily breathing rates, exposure frequency, and exposure duration were default rates as presented in the OEHHA guidance document entitled *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*[6] and guidance from SCAQMD.

Operational Emissions

This air quality analysis includes estimating emissions associated with long-term operation of the project. Indirect emissions of criteria pollutants with regional impacts would be emitted by project-generated vehicle trips. In addition, localized air quality impacts (i.e., higher CO concentrations or "hot-spots") near intersections or roadway segments in the project vicinity would also potentially occur due to project-generated vehicle trips.

Consistent with SCAQMD guidance for estimating emissions associated with land use development projects, the CalEEMod computer program was used to calculate the long-term operational emissions associated with the project. As previously discussed in the Project Location and Description section, the proposed project would construct a self-storage building of approximately 91,558 sq ft and 15 parking stalls. Therefore, the proposed project analysis was conducted using land use codes *Unrefrigerated Warehouse Rail* and *Parking Lot.* Trip generation rates used in CalEEMod for the project were based on the project's trip generation, which identifies that the proposed project would generate 108 net new ADT.[7] When project-specific data were not available, default assumptions from CalEEMod were used to estimate project emissions.

THRESHOLDS OF SIGNIFICANCE

The *State California Environmental Quality Act (CEQA) Guidelines* indicate that a project would normally have a significant adverse air quality impact if project-generated pollutant emissions would do any of the following:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project is in nonattainment under applicable NAAQS or CAAQS;

---

6 OEHHA. 2015. op cit.

7 LSA Associates, Inc. (LSA). 2025. *Project Trip Generation Summary,* Table A. February.

- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

Certain air districts (e.g., SCAQMD) have created guidelines and requirements to conduct air quality analysis. The SCAQMD's current guidelines, the *CEQA Air Quality Handbook*[8] with associated updates, were followed in this assessment of air quality impacts for the proposed project.

Regional Emissions Thresholds

SCAQMD has established daily emissions thresholds for construction and operation of proposed projects in the Basin. The emission thresholds were established based on the attainment status of the Basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emission thresholds are regarded as conservative and would overstate an individual project's contribution to health risks. Table B lists the CEQA significance thresholds for construction and operational emissions established for the Basin.

Table B: Regional Thresholds for Construction and Operational Emissions

Emissions Source	Pollutant Emissions Threshold (lbs/day)					
	VOCs	NO_X	CO	PM_{10}	$PM_{2.5}$	SO_X
Construction	75	100	550	150	55	150
Operations	55	55	550	150	55	150

Source: SCAQMD Air Quality Significance Thresholds (April 2019).
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compound

Projects in the Basin with construction- or operation-related emissions that exceed any of their respective emission thresholds would be considered significant under SCAQMD guidelines. These thresholds, which the SCAQMD developed and which apply throughout the Basin, apply as both project and cumulative thresholds. If a project exceeds these standards, it is considered to have a project-specific and a cumulative impact.

Local Microscale Concentration Standards

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a

[8] South Coast Air Quality Management District (SCAQMD). 1993. *CEQA Air Quality Handbook.* Website: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993) (accessed June 2024).

significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 ppm; and
- California State 8-hour CO standard of 9 ppm.

Health Risk Thresholds

The following limits for the maximum individual cancer risk (MICR) and noncancer acute and chronic Hazard Index (HI) from project emissions of TACs are considered appropriate for use in determining the health risk for projects in the Basin:

- **MICR:** MICR is the estimated probability of a maximally exposed individual (MEI) contracting cancer as a result of exposure to TACs over a period of 30 years for adults and 9 years for children in residential locations and over a period of 25 years for workers. The MICR calculations include multipathway consideration, when applicable.

  The cumulative increase in MICR that is the sum of the calculated MICR values for all TACs would be considered significant if it would result in an increased MICR greater than 10 in 1 million (1×10^{-5}) at any receptor location.

- **Chronic HI:** Chronic HI is the ratio of the estimated long-term level of exposure to a TAC for a potential MEI to its chronic reference exposure level. The chronic HI calculations include multipathway considerations, when applicable.

  The project would be considered significant if the cumulative increase in total chronic HI for any target organ system would exceed 1.0 at any receptor location.

- **Acute HI:** Acute HI is the ratio of the estimated maximum 1-hour concentration of a TAC for a potential MEI to its acute reference exposure level.

  The project would be considered significant if the cumulative increase in total acute HI for any target organ system would exceed 1.0 at any receptor location.

The SCAQMD's *CEQA Air Quality Handbook*[9] states that emissions of TACs are considered significant if an HRA shows an increased risk of greater than 10 in 1 million. Based on guidance from SCAQMD in the document *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis,*[10] for the purposes of this analysis, the threshold of 10 in 1 million was used as the cancer risk threshold for the proposed project.

Localized Impacts Analysis

SCAQMD published its *Final Localized Significance Threshold Methodology* in July 2008, recommending that all air quality analyses include an assessment of air quality impacts to nearby sensitive receptors.[11] This guidance was used to analyze potential localized air quality impacts associated with construction of the proposed project. Localized significance thresholds (LSTs) are developed based on the size or total area of the emission source, the ambient air quality in the source receptor area (SRA), and the distance to the project. Sensitive receptors include residences, schools, hospitals, and similar uses that are sensitive to adverse air quality.

LSTs are based on the ambient concentrations of that pollutant within the project SRA and the distance to the nearest sensitive receptor. For the proposed project, the appropriate SRA for the LST is the Central Orange County area (SRA 17). SCAQMD provides LST screening tables for 25-, 50-, 100-, 200-, and 500-meter source-receptor distances. As identified above, the closest sensitive receptors to the project site are the multifamily residences located immediately west of the project site at approximately 36 feet. In cases where receptors may be closer than 82 feet (25 meters), any distances within the 82-foot (25-meter) buffer zone can be used. As such, the minimum distance of 25 meters was used for purposes of the LST assessment. The maximum number of acres disturbed is determined on the construction equipment list (including type of equipment and number of equipment used) assumed for the day of construction activity and maximum emissions. Based on the anticipated construction equipment, it is assumed that the maximum daily disturbed acreage for the proposed project would be 3.0 acres.[12] Therefore, the LSTs for a 3.0-acre site at 25 meters were derived by interpolation using the project's SRA and mass rate look up tables developed by the SCAQMD. The proposed project is 3.48-acres; therefore, the maximum operation daily LST is based on the 3.5-acre threshold derived by interpolation for the proposed project. Table C lists the emissions thresholds that apply during project construction and operation.

Table C: SCAQMD Localized Significance Thresholds

Emissions Source	Pollutant Emissions Threshold (lbs/day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Construction (3.0-acres, 25-meter distance)	138.0	894.0	8.3	5.0
Operations (3.5-acres, 25-meter distance)	149.0	984.0	2.5	1.5

Source: Final Localized Significance Threshold Methodology (SCAQMD, July 2008).
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in size
$PM_{2.5}$ = particulate matter less than 2.5 microns in size

IMPACT ANALYSIS

Air pollutant emissions associated with the project would occur over the short term from construction activities and over the long term from project-related vehicular trips and due to energy consumption (e.g., electricity) by the proposed land uses.

Consistency with Applicable Air Quality Plans

Air quality plans are based on projections from local General Plans. A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed.

The proposed project would include the demolition of 16,684 sq ft of existing uses to construct a total of 91,558 sq ft self-storage space. Under post-development conditions, the total self-storage square footage on site (including the existing 36,299 sq ft of self-storage uses to remain) would be 127,857sq ft. The proposed project is not considered a project of statewide, regional, or area-wide significance (e.g., large-scale projects such as airports, electrical generating facilities, petroleum and gas refineries, residential developments of more than 500 dwelling units, and shopping centers or business establishments employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space) as defined in the California Code of Regulations (Title 14, Division 6, Chapter 3, Article 13, §15206(b)). Because the proposed project would not be defined as a regionally significant project under CEQA, it does not meet Southern California Association of Governments' (SCAG) Intergovernmental Review criteria.

The City's General Plan is consistent with the SCAG Regional Comprehensive Plan Guidelines and the SCAQMD 2022 Air Quality Management Plan (AQMP). Pursuant to the methodology provided in the SCAQMD *CEQA Air Quality Handbook*, consistency with the Basin 2022 AQMP is affirmed when a project (1) would not increase the frequency or severity of an air quality standards violation or cause a new violation, and (2) is consistent with the growth assumptions in the AQMP. Consistency review is presented as follows:

1. The project would result in short-term construction and long-term operational pollutant emissions that are all less than the CEQA significance emissions thresholds established by SCAQMD, as demonstrated below; therefore, the project would not result in an increase in the frequency or severity of an air quality standards violation or cause a new air quality standards violation.

2. The *CEQA Air Quality Handbook* indicates that consistency with AQMP growth assumptions must be analyzed for new or amended General Plan elements, Specific Plans, and significant projects. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities. As described in the Project Location and Description section, the proposed project site is currently zoned for SD-84 and M2. The project site is also within the I-OZ which allows for land use activity and development permitted by existing M1 and M2 zoning. Per City Municipal Code Section 41-489 and 41-472.5, the proposed project would require the approval of a Conditional

Use Permit (CUP) to operate on parcels zoned M1 and M2. Therefore, with approval of the CUP, the proposed project would be consistent with the City zoning code and the I-OZ and M2 zoning designation.

To determine the proposed project's consistency with the 2022 AQMP, the project must be consistent with the AQMP growth assumptions, which are based, in part, on assumptions made by local planning agencies in the SCAG's Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) regarding population, housing, and growth trends. According to SCAG's 2024–2050 RTP/SCS, the City's households and employment are forecast to increase by approximately 12,000 households and 4,700 jobs, respectively, between 2019 and 2050 and would total 88,600 households and 172,100 jobs by 2050.[13] The proposed project would include the addition of 91,558 sq ft of self-storage space. Based on information provided by the project applicant, the proposed project would not require any additional employees on site compared to existing operations. Therefore, the project's labor demand would not substantially increase employment projections in Santa Ana. As such, the project would not conflict with SCAG's growth assumptions for new job growth in the region as identified in the RTP/SCS.

Additionally, as described above, based on the proposed project size (an increase in 91,558 sq ft), the proposed project is not considered a project of statewide, regional, or areawide significance. Because the proposed project would not be defined as a regionally significant project under CEQA, it does not meet the SCAG Intergovernmental Review criteria.

Based on the consistency analysis presented above, the proposed project would be consistent with the regional AQMP.

Criteria Pollutant Analysis

The Basin is currently designated as nonattainment for the federal and State standards for O_3 and $PM_{2.5}$. In addition, the Basin is in nonattainment for the PM_{10} standard. The Basin's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of an ambient air quality standard. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, SCAQMD considered the emissions levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is not necessary. The following analysis assesses the

[13] Southern California Association of Governments (SCAG). 2024. Connect SoCal 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). Website: https://scag.ca.gov/sites/main/files/file-attachments/23-2987-tr-demographics-growth-forecast-final-040424.pdf?1712261839 (accessed June 2024).

potential project-level air quality impacts associated with construction and operation of the proposed project.

Construction Emissions

During construction, short-term degradation of air quality may occur due to the release of particulate matter emissions (i.e., fugitive dust) generated by demolition, grading, building construction, paving, and other activities. Emissions from construction equipment are also anticipated and would include CO, nitrogen oxides (NO_X), VOCs, directly emitted $PM_{2.5}$ or PM_{10}, and TACs such as diesel exhaust particulate matter.

Project construction activities would include demolition, grading, site preparation, building construction, architectural coating, and paving activities. Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and amount of operating equipment. Larger dust particles would settle near the source, whereas fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. SCAQMD has established Rule 403: Fugitive Dust, which would require the project applicant to implement measures that would reduce the amount of particulate matter generated during the construction period. The Rule 403 measures that were incorporated in this analysis include:

- Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving).
- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.
- Reduce traffic speeds on all unpaved roads to 15 miles per hour or less.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, sulfur oxides (SO_X), NO_x, VOCs, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using CalEEMod and are summarized in Table D. CalEEMod output sheets are provided in Attachment A.

Table D: Short-Term Regional Construction Emissions

Construction Phase	Maximum Daily Regional Pollutant Emissions (lbs/day)							
	VOCs	NO_X	CO	SO_X	Fugitive PM_{10}	Exhaust PM_{10}	Fugitive $PM_{2.5}$	Exhaust $PM_{2.5}$
Demolition	0.4	5.2	18.9	<0.1	1.0	0.1	0.2	0.1
Site Preparation	0.7	3.4	36.0	0.1	8.5	0.1	4.1	0.1
Grading	0.3	2.2	16.0	<0.1	3.0	0.1	1.4	0.1
Building Construction	0.4	4.4	15.0	<0.1	0.6	<0.1	0.2	<0.1
Paving	0.4	1.8	9.0	<0.1	0.2	<0.1	<0.1	<0.1
Architectural Coating	7.2	0.7	1.3	<0.1	0.1	<0.1	<0.1	<0.1
Peak Daily Emissions	**7.6**	**5.2**	**36.0**	**0.1**	**8.6**		**4.2**	
SCAQMD Threshold	**75.0**	**100.0**	**550.0**	**150.0**	**150.0**		**55.0**	
Significant?	**No**	**No**	**No**	**No**	**No**		**No**	

Source: Compiled by LSA (September 2024).
Note: Some values may not appear to add correctly due to rounding. Maximum emissions of VOCs occurred during the overlapping building construction and architectural coating phases.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

As shown in Table D, construction emissions associated with the project would not exceed the daily SCAQMD thresholds for VOCs, NO_x, CO, SO_X, $PM_{2.5}$, or PM_{10} emissions. Therefore, construction of the proposed project would not result in emissions that would result in a cumulatively considerable net increase of any criteria pollutant for which the project is in nonattainment under an applicable NAAQS or CAAQS.

Operational Air Quality Impacts

Long-term air pollutant emissions associated with operation of the proposed project include emissions from area, energy, and mobile sources. Area-source emissions include architectural coatings, consumer products, and landscaping. Energy-source emissions result from activities in buildings that use natural gas.

Mobile-source emissions are from vehicle trips associated with operation of the project. Area-source emissions consist of direct sources of air emissions at the project site, including architectural coatings, consumer products, and use of landscape maintenance equipment.

PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other particulate matter emission processes. Gasoline-powered engines have small rates of particulate matter emissions compared with diesel-powered vehicles.

Long-term operational emissions associated with the proposed project were calculated using CalEEMod. Table E provides the proposed project's estimated operational emissions. CalEEMod output sheets are provided as Attachment B.

Table E: Project Operational Emissions

Emission Type	Pollutant Emissions (lbs/day)					
	VOCs	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	0.3	0.2	2.5	<0.1	0.6	0.2
Area Sources	2.9	<0.1	4.0	<0.1	<0.1	<0.1
Energy Sources	<0.1	0.6	0.5	<0.1	0.1	0.1
Total Project Emissions	**3.2**	**0.8**	**7.0**	**<0.1**	**0.7**	**0.3**
SCAQMD Threshold	55.0	55.0	550.0	150.0	150.0	55.0
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (September 2024).
Note: Some values may not appear to add correctly due to rounding.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

The results shown in Table E indicate the proposed project would not exceed the significance criteria for daily VOCs, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions. Therefore, operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable NAAQS or CAAQS.

Long-Term Microscale (CO Hot Spot) Analysis

Vehicular trips associated with the proposed project would contribute to congestion at intersections and along roadway segments in the vicinity of the proposed project site. Localized air quality impacts would occur when emissions from vehicular traffic increase as a result of the proposed project. The primary mobile-source pollutant of local concern is CO, a direct function of vehicle idling time and, thus, of traffic flow conditions. CO transport is extremely limited; under normal meteorological conditions, it disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels, affecting local sensitive receptors (e.g., residents, schoolchildren, the elderly, and hospital patients).

Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable levels of service or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project's effect on local CO levels.

An assessment of project-related impacts on localized ambient air quality requires that future ambient air quality levels be projected. Existing CO concentrations in the immediate project vicinity are not available. Ambient CO levels monitored at the 1630 W. Pampas Lane station (the closest station to the project site), showed a highest recorded 1-hour concentration of 2.5 ppm (the State standard is 20 ppm) and a highest 8-hour concentration of 1.6 ppm (the State standard is 9 ppm) during the past 3 years.[14] The highest CO concentrations would normally occur during peak

[14] United States Environmental Protection Agency (USEPA). 2023. Outdoor Air Quality Data.

traffic hours; hence, CO impacts calculated under peak traffic conditions represent a worst-case analysis.

The proposed project is expected to generate 108 net new ADT, with 7 net new trips occurring in the a.m. peak hour and 11 net new trips occurring in the p.m. peak hour.[15] As the proposed project would not generate 100 or more a.m. or p.m. peak-hour trips, it did not meet the criteria for an evaluation of study area intersection or roadway segment levels of service. Therefore, given the extremely low level of CO concentrations in the project area and the lack of traffic impacts at any intersections, project-related vehicles are not expected to result in CO concentrations exceeding the State or federal CO standards. No CO hot spots would occur, and the project would not result in any project-related impacts on CO concentrations.

Health Risk on Nearby Sensitive Receptors

Sensitive receptors are defined as people who have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. As identified above, the closest sensitive receptors to the project site are the multifamily residences located immediately west of the project site at approximately 36 feet. The nearest worker receptor to the project site is located immediately east within 50 feet. The nearest school receptor to the project site is located southeast at approximately 1,800 feet from the project site's southern boundary.

A construction HRA, which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. Table F, below, identifies the results of the analysis assuming the use of Tier 4 Final construction equipment as proposed by the project.[16] Model snapshots of the sources are shown in Appendix C.

---

15 LSA Associates, Inc. (LSA). 2025. *Project Trip Generation Summary,* Table A. February.

16 This analysis was conducted assuming that there would be 100,600 sf of building construction, whereas the proposed project now includes 91,558 sf of building construction. Therefore, this analysis provides a conservative estimate of the potential health risks related to construction activities associated with the proposed project.

Table F: Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.12	0.007	0.000
Residential Receptor Risk	1.39	0.002	0.000
School Sensitive Receptor	0.001	<0.001	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (September 2024).
SCAQMD = South Coast Air Quality Management District

As shown in Table F, the maximum cancer risk for the residential receptor MEI would be 1.39 in one million, which would not exceed the SCAQMD cancer risk threshold of 10 in one million. The worker receptor risk would be lower at 0.12 in one million and the school receptor risk would be 0.001 in one million, which would also not exceed the SCAQMD cancer risk thresholds. The total chronic hazard index would be 0.002 for the residential receptor MEI, 0.007 for the worker receptor MEI, and less than 0.001 for the school receptor MEI, which is below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. Therefore, construction of the proposed project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations. No significant health risk would occur from project construction emissions.

Once the proposed project is constructed, the proposed project would not be a source of substantial emissions. Therefore, implementation of the proposed project would not result in new sources of TACs. Therefore, the project would not expose sensitive receptors to substantial levels of TACs.

Localized Significance Analysis

An LST analysis was completed to show the construction and operational impacts at 25 meters to the nearest sensitive receptors to the project site in SRA 17 based on a 3.0-acre daily disturbance area for construction and a 3.5-acre project site for operation. Tables G and H show the results of the LST analysis during project construction and operation, respectively.

Table G: Project Localized Construction Emissions

Source	Pollutant Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
On-Site Emissions	4.3	35.2	7.7	3.9
Localized Significance Threshold	**138.0**	**894.0**	**8.3**	**5.0**
Significant?	**No**	**No**	**No**	**No**

Source: Compiled by LSA (September 2024).
Note: Source Receptor Area 17, based on a 3.0-acre construction disturbance daily area, at a distance of 25 meters from the project boundary.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size

Table H: Project Localized Operational Emissions

Source	Pollutant Emissions (lbs/day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
On-Site Emissions	0.6	4.6	0.1	0.1
Localized Significance Thresholds	**149.0**	**984.0**	**2.5**	**1.5**
Significant?	**No**	**No**	**No**	**No**

Source: Compiled by LSA (September 2024).
Note: Source Receptor Area 17, based on a 3.5-acre operational project site, at a distance of 25 meters from the project boundary.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size

By design, the localized impact analysis only includes on-site sources; however, the CalEEMod outputs do not separate on-site and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions detailed in Table H assume all area- and energy-source emissions would occur on site, and 5 percent of the project-related new mobile sources (which is an estimate of the amount of project-related on-site vehicle travel) would occur on site. Considering the total trip length included in CalEEMod, the 5 percent assumption is conservative. Table H indicates the localized operational emissions would not exceed the LSTs at nearby residences. Therefore, the proposed operational activity would not result in a locally significant air quality impact.

As detailed in Tables G and H, the emission levels indicate that the project would not exceed SCAQMD LSTs during project construction or operation. The project's peak operational on-site NO_X emissions are approximately less than 1 pound per day. Due to the small size of the proposed project in relation to the overall Basin, the level of emissions is not sufficiently high to use a regional modeling program to correlate health effects on a Basin-wide level. On a regional scale, the quantity of emissions from the project is incrementally minor. Because the SCAQMD has not identified any other methods to quantify health impacts from small projects, and due to the size of the project, it is speculative to assign any specific health effects to small project-related emissions. However, based on this localized analysis, the proposed project would not expose sensitive receptors to substantial pollutant concentrations. Therefore, the project would not expose sensitive receptors to substantial levels of pollutant concentrations.

Odors

Heavy-duty equipment on the project site during construction would emit odors, primarily from equipment exhaust. However, the construction activity would cease after individual construction is completed. No other sources of objectionable odors have been identified for the proposed project.

SCAQMD Rule 402 regarding nuisances states: "A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property." The proposed uses are not anticipated to emit any objectionable odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

CONCLUSION

Based on the analysis presented above, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed SCAQMD thresholds of significance. Compliance with SCAQMD Rule 403: Fugitive Dust would further reduce construction dust impacts. The proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. The project would also be consistent with the 2022 AQMP and would also not result in objectionable odors affecting a substantial number of people.

Architectural Coating	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	137,337	45,779	2,980

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	16,684	—
Site Preparation	0.00	0.00	15.0	0.00	—
Grading	440	0.00	15.0	0.00	—
Paving	0.00	0.00	0.00	0.00	1.14

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Refrigerated Warehouse-Rail	0.00	0%
Parking Lot	1.14	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Refrigerated Warehouse-Rail	108	108	108	39,434	871	871	871	317,837
Parking Lot	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	137,337	45,779	2,980

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)

Refrigerated Warehouse-Rail	1,770,554	532	0.0330	0.0040	2,293,898
Parking Lot	43,501	532	0.0330	0.0040	0.00

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Refrigerated Warehouse-Rail	21,172,788	135,073
Parking Lot	0.00	0.00

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Refrigerated Warehouse-Rail	86.1	—
Parking Lot	0.00	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Refrigerated Warehouse-Rail	Cold storage	R-404A	3,922	7.50	7.50	7.50	25.0

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)

5.17. User Defined

Equipment Type	Fuel Type

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Construction would commence on November 2025 and occur for approximately 14 months. Phases were extended to account for a 14 month construction schedule. Assume overlap between building construction, paving, and architectural coating.
Construction: Off-Road Equipment	Default construction schedule with Tier 4 final engines
Operations: Vehicle Data	Based on the trip generation, the proposed project would generate 108 net new daily trips. Trip rate = 108 ADT / 91.558 tsf = 1.18
Land Use	Project site is 3.48 acres and would consist of a 91,558 sq ft self storage building, including 16 parking spaces and 10,422 sq ft of landscape area
Construction: Dust From Material Movement	440 Cy of soil import
