RE: Verizon Wireless Small Cell "Sonoma 006, 007, and 012"

Dear Aaron,

Please find attached the following documents in response to your letter dated September 11, 2018, addressing your design recommendations. The file includes revised documents for each above referenced project pole:

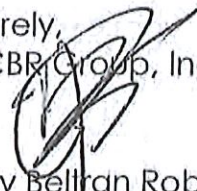

- Project Description Letters,
- Drawings,
- Photo Simulations,
- Radio Frequency Studies
- Vaulting Analysis

After review of your recommendations, and having worked with Verizon on making these concession to the site to revise the design as suggested in your letter, reducing the size of the antenna, reducing the quantity of radios, installing a cover at the radio unit base to conceal coax exiting the units, so units appear more streamline that run vertically along the pole.

These revised documents are being hand delivered to ensure we meet Planning deadline to be heard at the November 8, 2018 Planning Commission Meeting date.

Again, thank you for your continued support with the project and look forward to your review of the design revisions and formally recommending project approval. If you have questions please feel free to contact me at 415-806-2323 or Christy@TheCBRGroup.com.

Sincerely,
The CBR Group, Inc.
