

Energy Efficiency & Comfort

- Optional Low-E glass packages feature a transparent coating that reduces summer heat for better cooling and helps keep warmed air inside during cold months.
- For additional protection from energy loss, Argon gas, which is six times denser than air, is sealed inside the insulating glass unit with a High Performance HP glass package.
- Available HPMax triple-pane glass packages deliver up to 52% better thermal performance than dual pane windows with clear glass.
- HP Glass Packages with specialty Low-E glass and Argon can greatly reduce solar heat gain and lower cooling costs in warmer regions.
- With your comfort and the environment in mind, Ply Gem 200 series windows can be ordered ENERGY STAR® certified for any climate zone.

200 Series Windows. A complete vinyl window series that offers the right energy efficiency and design options for your home and the way you live.
