MANAGEMENT OF SONOMA COUNTY WILDFIRE DEBRIS

To ensure safety to workers, the public, and the environment, certain protocols must be followed during a wildfire disaster when removing structural ash and debris left from the fire. There are two ways for Property Owners to manage the debris and ash from the wildfire disaster.

1. **Owners Who Choose To Participate In The State Sponsored Consolidated Debris Removal Program.**

   Residential properties with destroyed structure(s) from the wildfires are being offered a clean-up and debris removal service conducted by specialized work crews, contracted and managed by federal and state waste specialists. Under limited circumstances, some commercial properties may be eligible as well. This program is being paid for with state and federal funds. To avoid duplication of benefits, if property owners have a specified amount for debris removal in their insurance policy, they will need to provide that specified amount to the County for reimbursement of costs of the clean-up. However, a property owner may participate in the program even if the property is not insured. Owners must sign up for this program by completing a Right-of-Entry form, to allow access to their property to complete the debris removal work.

   For the Right of Entry form and for Frequently Asked Questions regarding the Consolidated Debris Removal Program go to: https://www.sonomacountyrecovers.org/debris-removal

2. **Owners Who Choose Not To Participate In The State Sponsored Consolidated Debris Removal Program.**

   Due to the public health emergency, property owners are required to cause their property to be cleaned up and all burn debris must be removed in a timely manner. If property owners choose not to participate in the Consolidated Debris Removal Program described above (or if their properties are ineligible for the program), they may undertake the clean-up at their own expense with work performed by qualified personnel as set forth below.

   The owner will submit a Santa Rosa Fire Clean-Up Application (see attachment) and Work Plan to the City for approval. After implementation of the approved Work Plan, the owner must submit a certification showing that all work has been completed as specified. The work must be completed pursuant to standards set forth by the City and the State. These standards are established to ensure protection of public health and are the same standards applicable to the Consolidated Debris Removal Program. Documentation of adequate clean-up and proper disposal will be required. It is strongly encouraged that property owners review all requirements thoroughly before planning or pursuing their own debris removal. Property owners will not be allowed to build on their property until there is a certification that the property cleanup and removal of all hazardous waste has been completed in accordance with applicable standards and approved by the City.
A summary of the protocols and requirements is below:

<table>
<thead>
<tr>
<th>Clean Up Operations</th>
<th>Clean Up Protocols</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site Documentation</td>
<td>• Measure and record foundation and clean-up area.</td>
</tr>
<tr>
<td></td>
<td>• Notify appropriate entities of clean-up, including local utilities, USA Underground, and Air Pollution Control District(s).</td>
</tr>
<tr>
<td>Work Plan</td>
<td>• Create a Work Plan that provides for site testing and analysis, hazardous waste and asbestos removal, debris removal, erosion control, soil grading, and confirmation sampling.</td>
</tr>
</tbody>
</table>
| Application Process               | • Owner or contractor will submit a Santa Rosa Fire Clean-Up Application to the Santa Rosa Department of Planning and Economic Development, together with the Work Plan  
  • Once Application and Work Plan are approved, work may proceed.                                               |
| Site Testing and Analysis         | • The property owner will need to hire a certified Asbestos Consultant and Soil Consultant to test the site.                                        |
| Air Monitoring                    | • Fugitive Dust – Dust is a significant concern and there should be adequate dust control water applied to burn ash materials at all times, most importantly during contractor disturbance and loading to meet applicable standards. |
| Hazardous Waste and Asbestos Removal | • All remaining Hazardous Waste and Household Hazardous Waste must be identified and disposed by a certified Hazardous Materials Contractor.  
  • Asbestos removal must be assessed and removed by a licensed Asbestos Abatement Contractor.  
  • Waste must be disposed of at an approved location from the list provided by the Sonoma County Department of Environmental Health. Available locations may change, and locations within Sonoma County may not be available. |
| Debris Removal                    | • Remove ash and debris, metals, and concrete from the site and dispose of properly.  
  • Recycle metals and concrete if possible.  
  • Waste must be disposed of at an approved location from the list provided by the Sonoma County Department of Environmental Health. Available locations may change, and locations within Sonoma County may not be available. |
| Soil Grading                      | • Remove 3 to 6 inches of soil from the impacted area after the burn ash and debris is removed to a level of visually clean.                        |
| Confirmation Sampling             | • A licensed Soil Consultant will collect soil samples from 0-3 inches for confirmation sampling and compare soil sample results against clean-up goals.  
  The testing standards will be available at the Santa Rosa Department of Planning and Economic Development and will be the same standards used for the public cleanup.                          |
| Appliance and Vehicle Recycling   | • Appliances and vehicles must be handled properly to meet the requirements of metals recycling facilities.                                      |
3. **Owners Who Choose Neither Option Above And Fail To Adequately Remove Debris From Their Property.**

Due to the public health dangers to the community, owners who choose **not to participate** in the State and Federal sponsored Consolidated Debris Removal Program and who **do not accomplish** an adequate clean-up through their own actions, will have the wildfire debris inspected by the City, and be subject to potential remedial action by the City that may include, but not be limited to, hazard removal and/or relocation, clean-up, site evaluation, soil testing, and/or chemical analysis. All City expenses incurred for such inspection and mitigation, including but not limited to, contract work, staff time, and administration, are subject to full cost recovery from the owner with a lien recorded on the property.

**Confirmation Sampling**

Confirmation sampling should be conducted by a licensed professional after fire-related debris has been removed from a property. Representative soil samples must be collected and analyzed to determine compliance with **clean-up goals** used by the State and federal government which will be available at the Santa Rosa Department of Planning and Economic Development. The total number of samples to be collected should be based on estimated square footage of ash footprint:

<table>
<thead>
<tr>
<th>Estimated Square Footage of Ash Footprint (Decision Unit)</th>
<th>Number of 5-Point Aliquots</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-100 square feet</td>
<td>1</td>
</tr>
<tr>
<td>101-1,000 square feet</td>
<td>2</td>
</tr>
<tr>
<td>1,001-1,500 square feet</td>
<td>3</td>
</tr>
<tr>
<td>1,501-2,000 square feet</td>
<td>4</td>
</tr>
<tr>
<td>2,001-5,000 square feet</td>
<td>5</td>
</tr>
<tr>
<td>&gt;5,000 square feet</td>
<td>Must consult with local environmental health officials</td>
</tr>
</tbody>
</table>

All confirmation samples should be collected from a depth of 0-3 inches using a dedicated 4-ounce plastic scoop and be placed in 8-ounce jars. Samples should be shipped to an approved laboratory for analysis by Title 22 Metals for antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc by EPA Method 6020, and mercury by EPA Method 7471A. This sampling guidance is informational and preliminary. Additional guidance regarding requirements will be provided with standards.

*This information is based upon statutes and regulations and is intended to provide a basic overview to help achieve compliance. This document does not replace or supersede relevant statutes and regulations and is not intended as legal advice.*
SANTA ROSA FIRE CLEAN-UP APPLICATION

Who needs to complete this form? Property owners who elect not to participate in the State sponsored debris clean-up program and choose to clean-up their property on their own, or with a qualified contractor. The work must be done to standards established in ordinances and regulations so that health and safety risks are adequately addressed for the community and the environment. Documentation on adequate cleanup and proper disposal will be required. State disaster funding will not be able to reimburse for this work.

Property Owner Name: ___________________________________________ Phone: __________________________

Property Owner Mailing Address: _______________________________________________________________

Subject Property Address: _________________________________________________________________

Assessor's Parcel Number (APN): ____________________________________________________________

Description: Provide Work Plan (provide additional paperwork as needed)

A. Program Participation

1. Who will perform the debris removal? □ Owner □ Licensed contractor
   If contractor please provide the following:
   Name of Contractor: ________________________________________________________________
   License Number: _________________________________________________________________
   Start Date: __________________________

B. Property Owner Acceptance

I have reviewed the protocols as stated in the “Management of Sonoma County Wildfire Debris” document and specifications for private debris removal. I understand the ash and debris contain hazardous substances and can be a health hazard. I understand the ash and debris shall be wetted down prior to removal and dust shall be controlled. The ash and debris shall also be completely encapsulated with a tarp (“burrito wrap” method) prior to being transported for disposal. I understand that soil samples shall be collected in order to self-certify the project was completed.

Property Owner: ___________________________________________ Date: ________________

Contractor Signature: ___________________________________________ Date: ________________

City of Santa Rosa Acknowledgement: ___________________________________________ Date: ________________
# Property Clean-up Completion Certification

**What is the purpose of this form?**
The purpose of this form is to certify that your parcel has been cleaned of hazardous wastes, ash, and debris. This form will be used to certify completion of clean-up by property owners or contractors so that building permits can be issued for new and replacement structures.

**Who needs to complete this form?**
Property owners who elect **not** to participate in the State sponsored debris program and choose to clean-up their property on their own or with a qualified contractor.

## A. Program Participation

- [ ] Yes I completed the **“Fire Clean-Up Application”**
- [ ] Yes I read and understand the **“Management of Sonoma County Wildfire Debris”**

## B. Asbestos Screening and Disposal

1. [ ] Yes  [ ] No  My asbestos and household hazardous waste was screened and removed by a licensed certified contractor.

   - [ ] Year structure was built: _____________________________

   If you checked “Yes” skip Part B2.

   If you checked “No” please provide the following information in part B2:

2. **Asbestos/Hazardous Waste Screening**

   - Consultant Name: ___________________________  
   - Certification Number: _______________________

   - Contact Address: ___________________________  
   - Telephone: ________________________________

   **Asbestos/Hazardous Waste Disposal**

   - Contractor Name: ___________________________  
   - License Number: ___________________________

   - Contact Address: ___________________________  
   - Telephone: ________________________________

   - Disposal Facility: ___________________________(attach disposal facility documentation)
C. Ash and Debris Disposal

1. The ash and debris was removed and disposed of by: ☐ Myself ☐ Licensed contractor

   If you checked “Myself” go to Part C2 below.

   If you checked “Licensed Contractor,” please provide the following information:

   Contractor Name: ___________________________ Telephone: ___________________________
   Contact Address: ___________________________ City: ___________________________
   License Number: ___________________________ License Type: ___________________________

2. The ash and debris from my property was disposed at the following facility(s):

   Facility Name: ___________________________
   Date(s) of Delivery: ___________________________
   Date of Completion: ___________________________(attach disposal facility documentation)

   Facility Name: ___________________________
   Date(s) of Delivery: ___________________________

D. Metal Recycling

1. The metal was removed and disposed of by: ☐ Myself ☐ Licensed contractor

   If you checked “Myself” go to Part D2 below.

   If you checked “Licensed Contractor,” please provide the following information:

   Contractor Name: ___________________________ License Number: ___________________________
   Contact Address: ___________________________ Telephone: ___________________________

2. The metal from my property was disposed at the following facility(s):

   Facility Name: ___________________________
   Number of passenger vehicles: ___________________________
   Number of large vehicles: ___________________________
   Number of recreational vehicles: ___________________________
   Number of large equipment: ___________________________
   Any further itemized description of metal types: ___________________________
   Date(s) of Delivery: ___________________________
   Date of Completion: ___________________________(attach disposal facility documentation)
I have reviewed and understand the “Management of Sonoma County Wildfire Debris” requirements.

I hereby certify that all identifiable asbestos, household hazardous waste, and burn ash that may have been generated by the 2017 Sonoma Wildfire on my property identified in this document has been identified, removed and disposed as described herein and in conformance with the Management of Sonoma County Wildfire Debris plan attached, and in accordance with work described in the Work Plan dated ______________.

I understand that since cleanup of the above-mentioned property was performed under my direction, the City of Santa Rosa cannot certify that cleanup was adequate until I submit proof of clean up and soil testing.

I agree to accept all responsibility for loss or damage to any person or entity, including City of Santa Rosa, and to defend and indemnify, hold harmless, and release City, its elected representatives, officers, agents, and employees, from and against any actions, claims, damages, demands, losses, liabilities, disabilities or expenses, defense costs (including reasonable attorney fees), of any kind or nature, that may be asserted by any person or entity with respect to the removal of debris and any hazardous material from the above mentioned real estate property.

Property Owner Signature: __________________________ Date: __________

City Acknowledgement: __________________________ Date: __________

The City of Santa Rosa cannot make recommendations or referrals for private businesses. There are many qualified firms who can be contacted to provide these services.
Guidelines / Templates / Resource List for Property Owners, Contractors and Consultants

The following guidelines, templates, and resource list have been created in order to assist property owners and or / contractors and consultants through the clean-up process. While the templates presented here are optional, it is highly encouraged that the organizational processes outlined are adhered to in order to facilitate an expedient review and approval of work plans and reports such that a property completion certification can be issued.

Guidelines/Templates/Resource Summary

Appendix A  Work Plan Checklist/Contents
Appendix B  Report Checklist/Contents
Appendix C  Solid Waste Disposal Site List
Appendix D  Recycling Resource List

Work Plans and Reports Checklist/Contents

Please be advised it is the intent of Work Plans and Reports to provide working guidance such that no steps are missed in the clean-up process that might unduly burden property owners in having to perform additional or unnecessary work that may have been caught at the early stages of the project clean-up. With this, submittals made under these guidelines can be abbreviated to the bare necessities in order to achieve clean-up removal and disposal goals. For example, such line items as fugitive dust control may be addressed by referencing posted County documents and acknowledging that practices outlined therein will be adhered to.

Included as Appendix A and B to this document please find general work plan and report format templates that will assist in the timely review of submitted documents.

Debris Removal Requirements to Solid Waste Disposal Facilities

As a general note, sites that the EPA has flagged as potentially not cleared of household hazardous waste (HHW) must be appropriately addressed within the work for characterization, removal and disposal. Burn waste/ash at a minimum shall be disposed of at a Class III disposal facility with a liner approved by the Regional Water Control Board to accept the waste, and any characterization requirements of the disposal site must be met before transportation to such site. An approved hauler appropriately licensed for the material transported will need to perform such work, and the material must be wetted and burrito wrapped (CalRecycle protocol) and tarped for transport and ultimate disposal. Contractors/haulers failing to adhere to this standard
may have their material rejected at the disposal facility and/or a fine imposed.

Asbestos transport and disposal must be disposed of at a facility permitted to accept such waste. Best management practices shall be established in such handling and disposal (work plan should have provisions outlined where asbestos is encountered), and a hauler appropriately licensed for the material transported will need to perform such work.

Transport and Disposal documentation for generated debris removal should be retained and included with your property clean-up completion certification submittal. Included as Appendix C, is a preliminary list of disposal facilities provided in collaboration with the Regional Water Board and CalRecycle, which are likely to accept the material. Please note such facilities are working with their regulators in some cases with conditional waivers, and may not immediately be able to take the material. As such, as more information becomes available, disposal options updates will be provided.

**Dust Control**

- Property owners or their contractors must provide water or an approved dust palliative, or both, to prevent dust nuisance at each site. Dust resulting from performance of the work shall be controlled at all times.
- Each area of ash and debris to be removed must be pre-watered 48 to 72 hours in advance of the removal. Hoses with a fine spray nozzle are recommended. The water must be applied in a manner that does not generate runoff. Engineering controls for storm water discharges must be in place prior to dust control operations.
- All loads shall be covered with a tarp; this includes metal debris. Ash and debris loads shall be fully encapsulated with a tarp ("burrito wrap" method). Concrete loads are exempt from a tarp provided the loads are wetted prior to leaving. If concrete loads generate dust, then the loads must be wetted and covered.
- All waste material that is not unloaded at the end of each workday should be consolidated, sufficiently wetted, and/or covered to prevent the offsite migration of contaminants.
- All visibly dry disturbed soil surface areas of operation should be watered to minimize dust emissions during performance of work.
- Speeds must be reduced when driving on unpaved roadways.
- Procedures must be implemented to prevent or minimize dirt, soil, or ash contaminating roadways, neighboring parcels, or creating an airborne health hazard. The use of blower devices, dry rotary brushes, or brooms for removal or carryout and track out on public roads is strictly prohibited.

**Vehicle and Road Safety**

If removal activities on property owners’ parcels will create a roadway blockage or hinder traffic patterns, property owners or their contractors are responsible for obtaining any required local permits and shall post all warning signs, as required by local ordinances. As there may be many contractors actively working on remediation efforts in the burn area, it is in property owners’ best interests to identify removal and remediation efforts in adjacent areas that could impact the ability to locate, park, or transport equipment and materials.

Initial Screening Criteria have been established in consultation with CalRecycle for soil confirmation sampling after completion of visible clean-up of properties. Please note, that these are initial health screening criteria in the absence of background data. As such, screening levels provided here may be raised (more lenient) should ambient concentrations of metals be found to be prevalent in background data sets. Testing of metals must be performed by EPA Lab Method 6020, with the exception of Mercury by EPA Method 7471A.

General Recycling and Testing Guidelines

Included as Appendix D is a resource guide for general recycling of concrete and metals. Please note, this list is provided as a courtesy and information contained herein should be verified by the property owner/contractor/consultant before taking material to vendors listed. Additionally, for concrete, transport and disposal, disposal may be limited due to the potential presence of asbestos. As such testing is recommended before transport and disposal and acceptance criteria should be verified with potential processors.

Well, Septic and Sewer Guidelines

Well Safety
- Private well water is not regulated by any government agency. Although your well water may taste and smell fine, the only way to know your well water is safe is by testing it. It is the responsibility of the individual property owner to ensure that
their drinking water supply is safe by having the well water tested by a state certified laboratory. View a list of Laboratories that can perform these tests on the County of Sonoma Environmental Health & Safety website.

Septic Systems

- Onsite septic systems have most of their functional components below ground and are typically more resistant to fire damage. However, it is important to inspect the aboveground electrical and plumbing system for damage to PVC piping that may have been impacted by heat. If your wastewater disposal system has been damaged, or if your system is backing up or malfunctioning, discontinue use and contact Permit Sonoma 707-565-2849 or visit: http://sonomacounty.ca.gov/PRMD/Eng-and-Constr/Well-and-Septic/

Sewer Safety

- Identify location and condition of sewer lateral.
- Sewer lateral must be securely capped and not allow any material to enter the collection system.
- If the sewer lateral has not already been capped, this action should be completed as a first step in the debris removal process. Please contact the City of Santa Rosa Planning and Economic Development Department for additional details.

Grading and Erosion Control

Once grading has been completed, best management practices (BMPs) shall be implemented to establish erosion control at the disturbed site.

   a. Follow best management erosion and sediment control practices (BMPs) to prevent ash, soil, and other pollutants from washing into the street, drainage courses and culverts, or onto neighboring properties. A copy of the City’s storm water BMPs may be found at: https://srcity.org/1255/Low-Impact-Development.
   b. Stockpiled materials that are not immediately loaded for transport shall be handled and stored on site in such a manner as to avoid offsite migration. Stockpiles may be stored for up to 180 days. This may include wetting and covering the waste until it is loaded and transported. Locate stockpiles away from drainage courses, drain inlets or concentrated flows of storm water.
   c. Stockpiled material may not be stored or placed in a public roadway.
   d. If a stockpile is classified as hazardous, it must be transported to a hazardous landfill. Hazardous materials and refuse must be kept in closed containers that are covered and utilize secondary containment, not directly on soil. If the stockpile is non-hazardous, it can be sent to a Class Three (3) landfill.
   e. During the project rainy season, cover non-active soil stockpiles and contain them within temporary perimeter sediment barriers, such as berms, dikes, silt fences, or sandbag barriers. A soil stabilization measure may be used in lieu of cover.
   f. Implement appropriate erosion control measures during debris removal and provide final site stabilization after debris removal is completed. PED staff will
assist applicants with the scope of these minimum requirements with submittal of the Demolition Permit.

**Foundation Study/Certification for Reuse Guidelines**

Should property owners wish to repurpose/use existing foundations, a California licensed civil/structural engineer will be required to certify such use is appropriate. The engineer will need to document any field testing, observations, or implemented lab material testing used to certify such conclusions and recommendations for reuse. A report of findings will need to be stamped by the licensed professional in a report which will be reviewed by a foundation engineer under contract with the City.

**Appendix A**

**Work Plan Checklist/Contents**

**Index of Work Plan Contents:**

**Section 1:** Property Information (Assessor’s Parcel Number, Contacts for Owner/Contractor(s)/Consultants)

**Section 2:** Description of work to be performed:
- 2A Site Testing and Analyses Plan (Asbestos and Soil)
- 2B Air Monitoring Protocols for Fugitive Dust
- 2C Hazardous Waste and Asbestos Removal Plan
- 2D Debris Removal Plan
- 2E Soil Grading / Removal to level of visually clean
- 2F Foundations Plan (Removal or Testing for Potential Reuse)
- 2G Confirmation Sampling
- 2H Appliance and Vehicle Recycling or Disposal
- 2I Well and Septic Plan (if applicable)

Metal, scrap

Ferrous metals contain iron (e.g., steel); magnets stick to ferrous metal.

Nonferrous metals do not contain iron (e.g., brass, aluminum, copper).

Recyclable scrap metal (ferrous and nonferrous metals) is banned from disposal at County Refuse Disposal Sites. All County Refuse Disposal Sites, as well as a number of other locations, offer recycling for scrap metal. See related topics on this website:
