STORM WATER QUALITY

What is Storm water?

Storm water is rain or melting snow that flows off of rooftops, paved areas, bare soil and lawns. This runoff flows into larger bodies of water (from puddles, to ditches, to streams, to lakes and rivers) until it eventually flows into the ocean.

What's the concern about storm water?

In its journey from a puddle to the ocean, storm water picks up and carries many of the pollutants it encounters. These pollutants include sediment, pet waste, pesticides, fertilizers, automobile fluids (such as gasoline, oil and antifreeze), de-icing products, yard wastes, and litter.

What Can You Do?

The most effective way to reduce storm water pollution is to stop it from entering the system in the first place. In other words, if you guard our local drains, you can dramatically improve what happens in our creeks, rivers and lakes.

Outdoor Home Maintenance

It is possible to have a beautiful yard and a healthy environment. You can prevent your lawn and garden from contributing polluted runoff to streams, lakes, and rivers.

Chemicals, fertilizers, herbicides, and pesticide

- Apply these substances sparingly.
- Read labels carefully and do not apply if the forecast calls for rain. If it rains, products will wash off into waterways before they have a chance to work.
- Clean up any spills immediately, and store products so that they won't get wet or leak.
- Consider natural and nontoxic alternatives to pesticides.
