We're Hiring

Would you like to be part of building the next generation insights, data and automation products & services to the market? Come join Odyssey!

We're looking for both junior and mid experienced developers to our cross functional team in Stockholm.

Odyssey is an innovative insights agency. With novel methods where we practice out of the box thinking, using modern technology and make use of other untraditional data sources we deliver extra ordinary insights to our clients helping them make use of the insights in their businesses by automating processes with actionable data deliveries. This we do with the assistant of our data science team creating AI and machine learning models and utilising them in our modern high capacity data and automation platform Qogai.

Now we're looking for more developers to the development team of Qogai, our insights SaaS platform. We continuously develop the platform to support new insights products and services for our clients. Qogai serves as a SaaS platform for our products and services to our clients but also as an internal tool for our data science team.

Qogai uses a hybrid architecture with services in our private cloud and Google Cloud Platform as well as other online services. Our platform is composed of many different sub services and we use several different technologies and programming languages. Our core service areas of Analytics Services, Visualisation Services, Data Storage Services and Data Integrations Services uses modern technologies to be in the fore front of insights services.

💎 **About the position:**
We are looking for junior or mid experienced developers. Full stack or both backend or frontend developers knowledge in the main stack requirement or similar but with a fast learning curve.

We are an entrepreneurial driven fast moving team and with that comes a lot of flexibility, creativity but also high individual responsibility. We promote learning and testing new ways of doing things and trying out new technology. We continuously evaluate and transform our platforms and services. The possibilities to learn new things, grow your experience and evolving into new roles are huge. We build this platform together as a team where you have a lot of possibilities of influencing on platform design and technologies used.

The Qogai technology stack n short:
- Google Cloud Platform
- App Engine
- Cloud Storage
- BigQuery
- Cloud Dataflow
- Cloud Data Fusion
- Cloud Pub/Sub
- Cloud Run

Main programming languages we use:
- Javascript (Angular/React)
- Python
- C# .Net
- NodeJS
- R

🚀 **Your profile:**
Junior or Mid (1-3 years) level of experience in developing with any of the technologies below.

Main stack requirements for this assignment:
Frontend: *Javascript* heavy Single Page Applications with Angular (not AngularJS).
Backend: *Python* and NodeJS.

Sounds like a journey you'd like to be a part of? And that your profile matches our wish list? Well. Then we're happy to meet with you to discuss how we can be in partnership of success. Send your application to peter.lapalus@odyssey.se
