The Partner’s Journey: From Code to Revenue

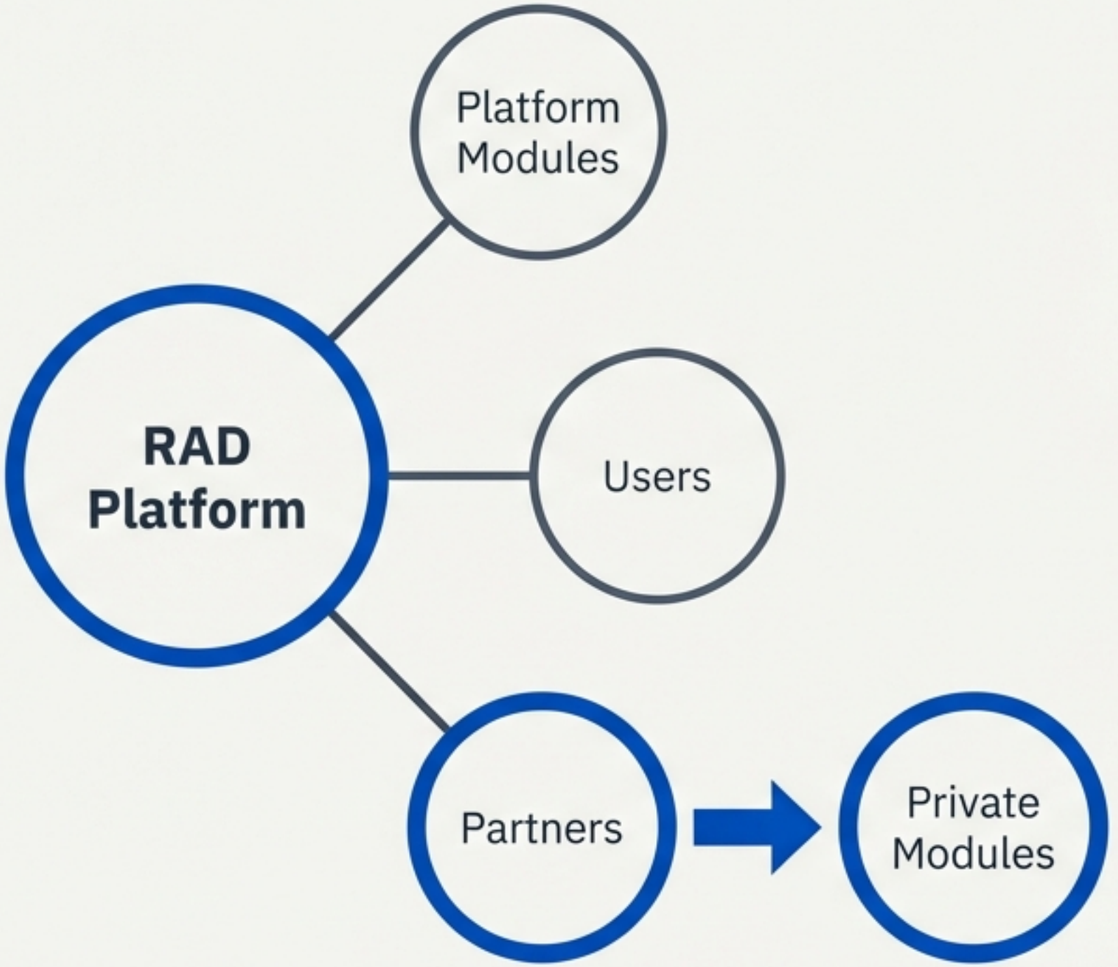
A Strategic Guide to Publishing and Monetizing on the RAD Platform

NotebookLM

You Play a Special Role in the Ecosystem

Welcome to the RAD Platform. As a Partner, you have the unique ability to publish and deploy your own **Private Modules**, transforming your expertise expertise into a scalable catalog of solutions.

This guide is your roadmap. It will walk you through every step of the lifecycle, from connecting your repository to tracking your revenue. Our goal is to provide a clear pathway for your success.



NotebookLM

Chapter 1: Laying the Foundation

Connect Your Codebase to Unlock Its Potential

1 **Navigate to Profile**

Access your personal settings from the user menu.

2 **Enter GitHub Token**

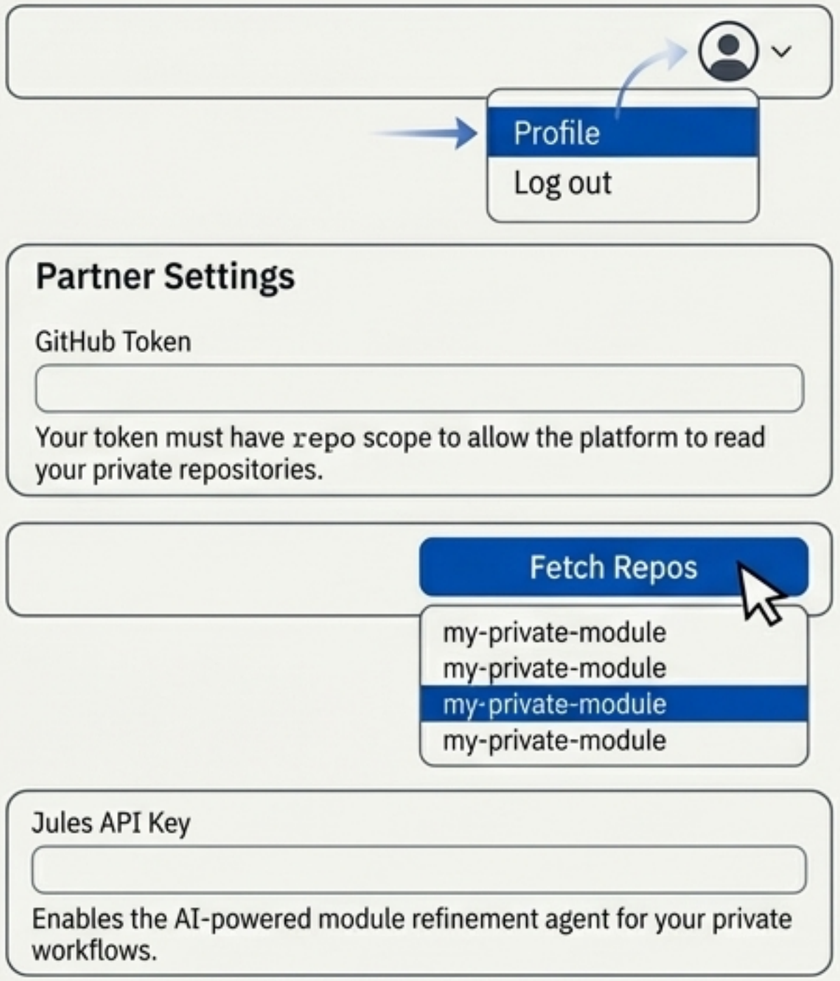
Securely connect your account to the platform.

3 **Fetch & Select Repo**

Choose the repository you want to connect.

4 **Add Jules API Key (Optional)**

Enhance your workflow with AI assistance.



NotebookLM

Chapter 2: Building Your Catalog

The Publishing Workflow at a Glance

Scan → **Select** → **Publish/Update** → **Deploy**

Scan

The platform automatically scans your connected GitHub repository for valid Terraform modules (`main.tf` or `variables.tf`).

Select

From the Publish page, you select the modules you want to make available for deployment.

Publish/Update

A single click adds new modules or updates existing ones with the latest changes from your repo.

Deploy

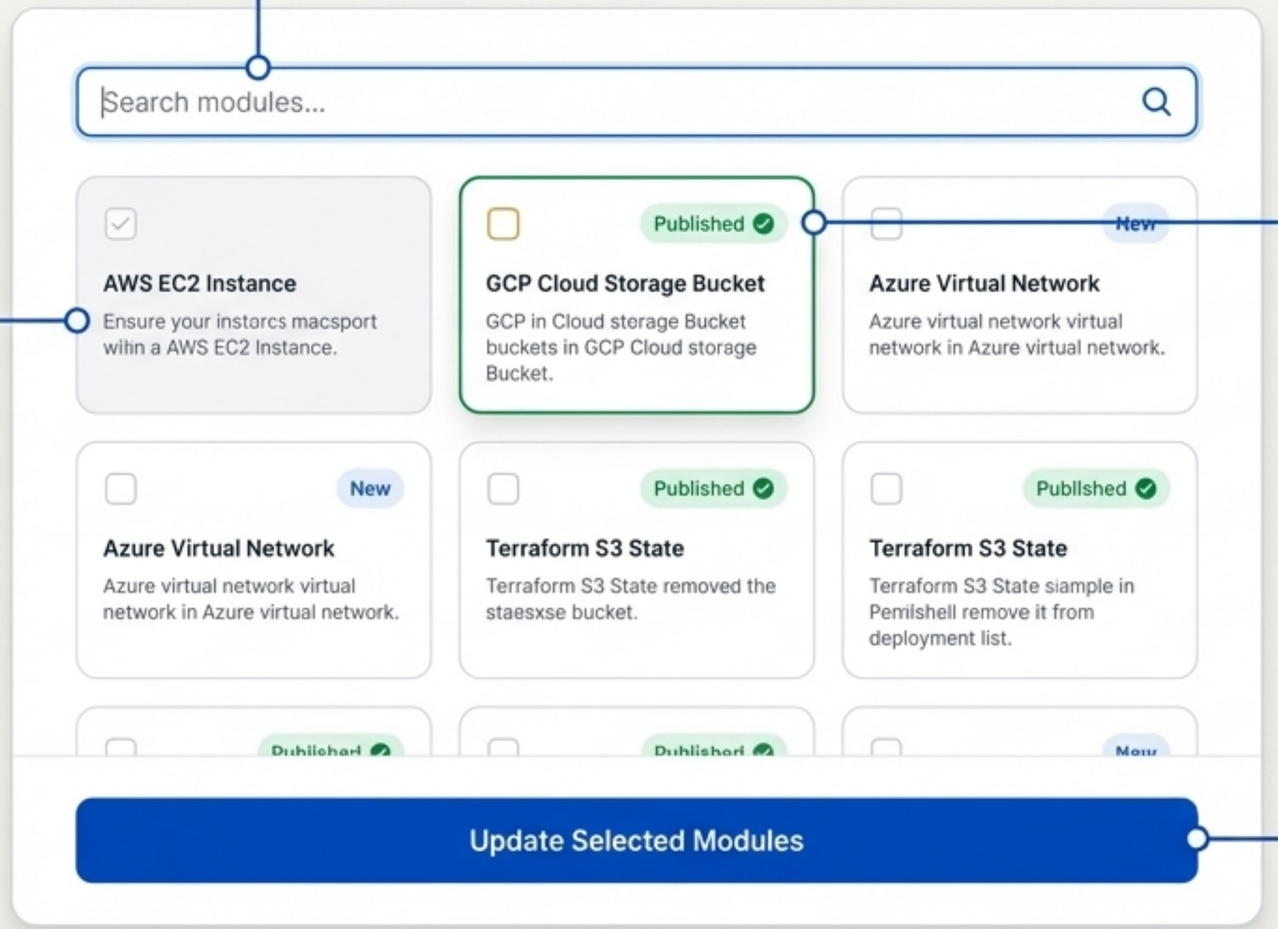
Your modules are now live and available exclusively to you in the 'Deploy' section.

NotebookLM

Mastering the Publish Page

Quickly find any module in your repository by name.

All valid modules appear as selectable cards. Simply click to select.



Status Indicators: Clearly see which modules are already `Published` and which are `New". To update a published module, just select it and click "Update".

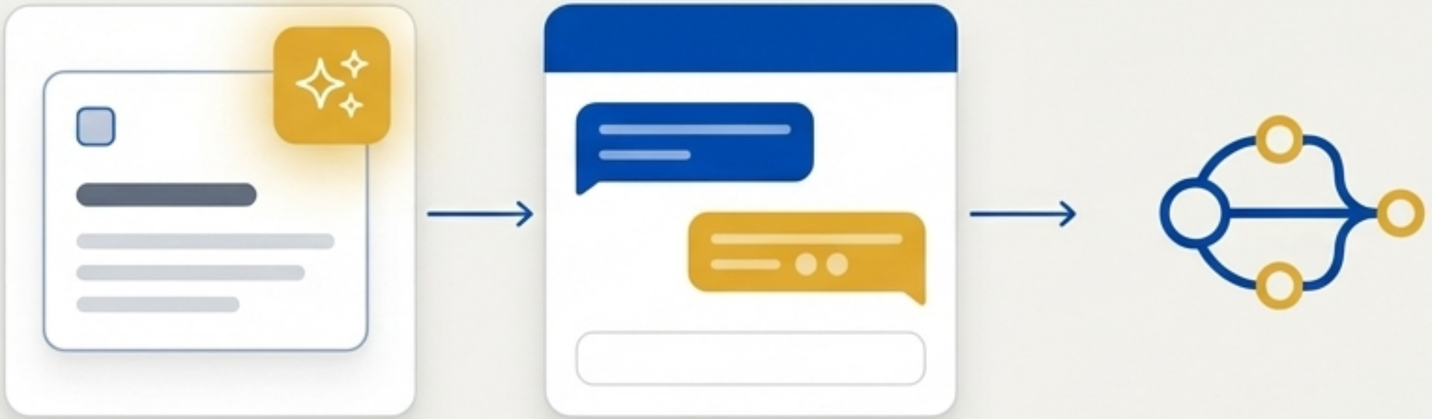
Your Action Hub: This button dynamically changes to "Publish" for new modules or "Update" for existing ones. Deselecting a module and clicking "Update" will remove it from the deployment list.

NotebookLM

Chapter 3: Your Secret Weapon

Refine and Accelerate with the Jules AI Agent

If you've configured your Jules API key, you gain access to our AI-powered refinement agent directly on the Publish page. Use it to refactor code, add new features, or fix bugs—without ever leaving the platform. IBM Plex Sans.



Activate

Click the sparkles icon on any module.

Interact

A chat interface opens. Give Jules your instructions in plain English.

Commit

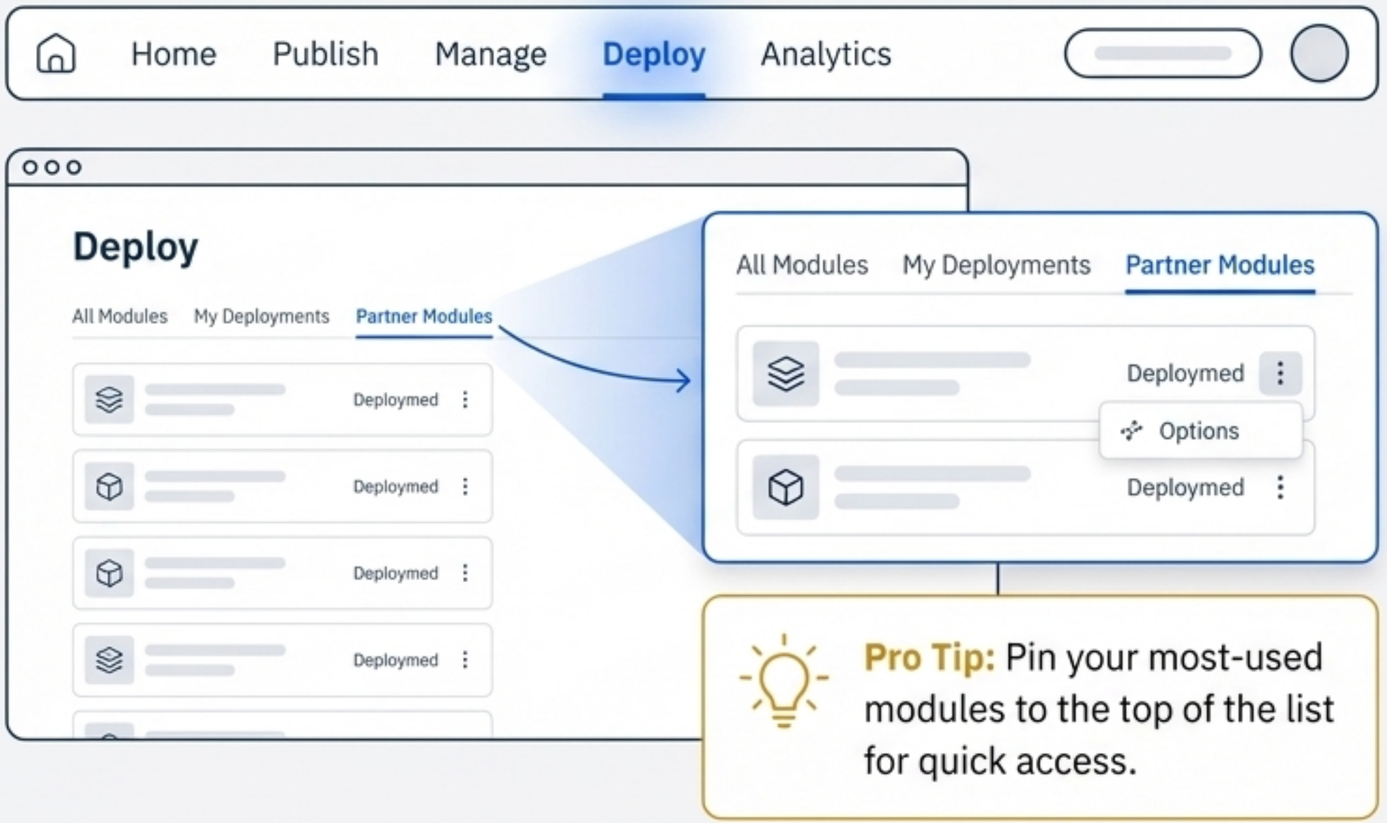
Jules proposes changes and, upon your approval, commits them directly back to your GitHub repository.

NotebookLM

Chapter 4: Deployment & Usage

Deploying Your Private Modules

Your published modules are exclusive to you. They are never visible to other partners.



For Admins: Note that System Administrators can view all deployments across the organization for oversight purposes.

NotebookLM

Tracking Your Platform Credits and Costs

Credit Transactions

View a complete history of your credit awards and usage.

Project Costs

See a detailed breakdown of costs associated with your running projects.

Project Invoices

Download PDF invoices for your project costs (if subscriptions are enabled).

Buy Credits

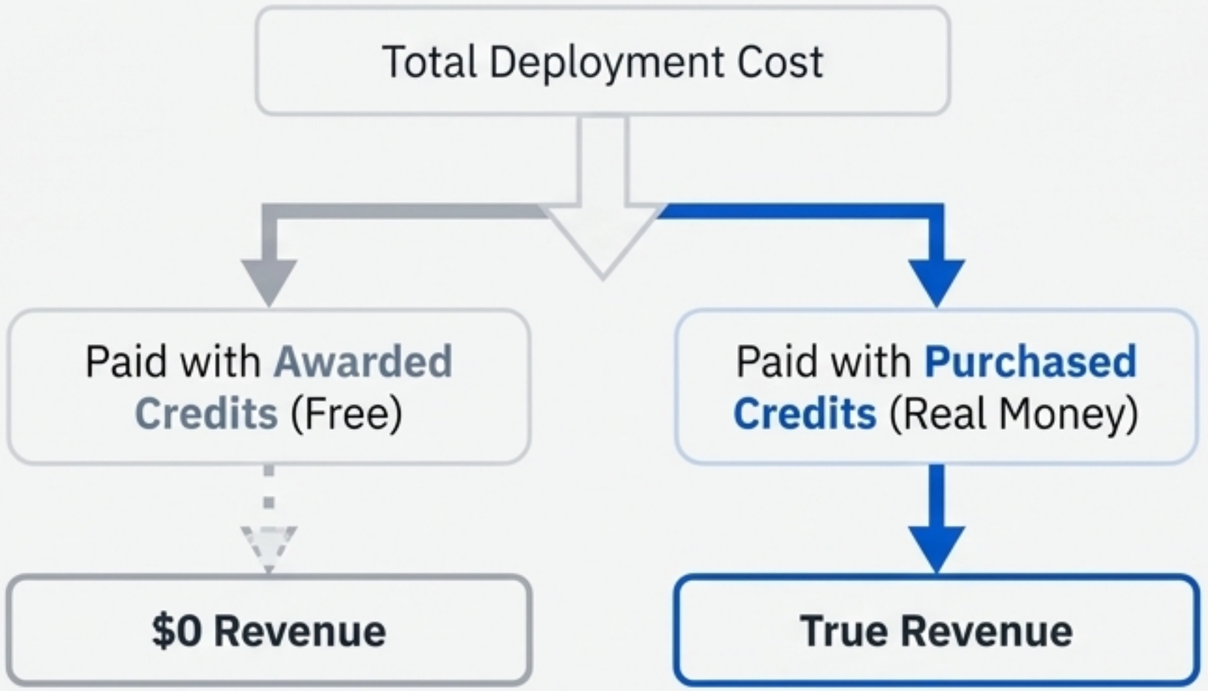
If enabled for the platform, you can purchase additional credits here.

NotebookLM

Chapter 5: The Payoff

How You Earn Revenue on the RAD Platform

As a Partner, you earn a percentage of the revenue generated when users deploy your modules. This is configured by your platform Administrator as the Partner Revenue Share.



Revenue is generated only when a deployment cost is covered by Purchased Credits. This 'True Revenue' is the basis for your payout.

NotebookLM

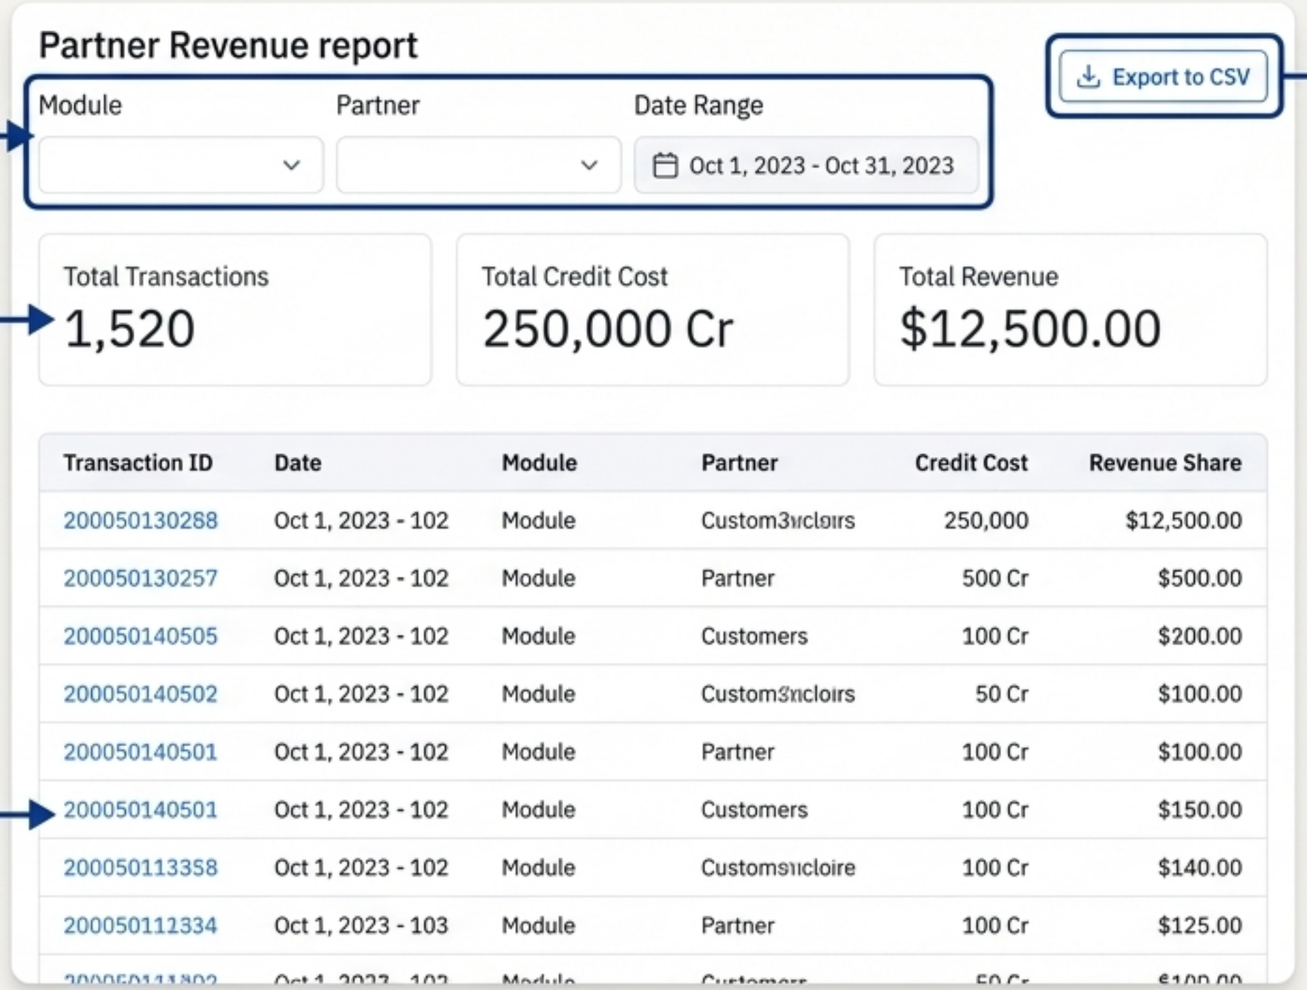
Your Dashboard for Tracking Module Performance

Navigate to **Billing > Partner Revenue**

Powerful Filtering: Isolate the data you need. Filter by specific Module, one or more Partners (for Admins), and a custom Date Range.

At-a-Glance Summary: See total transactions, total credit cost, and total revenue for your selected period.

Granular Data: A detailed log of every revenue-generating transaction.



Take it Offline: Export the full report to CSV for your own analysis and record-keeping.

NotebookLM

Deconstructing the Revenue Report

Date

The exact date the transaction occurred.

Module Name

The specific module that generated the revenue.

User Email

The user who deployed your module.

Credit Cost

The cost of the deployment in platform credits.

Revenue

The final "True Revenue" amount generated by this transaction.

NotebookLM

Chapter 6: Your Place in the Ecosystem

Understanding Data Visibility and Roles

Partner (You)

Sees: Your own deployments, your private modules, public platform modules.

Does Not See: Other partners' private modules or their deployments.

Other Partners

Sees: Their own data, public platform modules.

Does Not See: Your private modules or deployments.

System Administrator / Finance

Sees: All deployments, all modules (partner and platform), all revenue data.

Your private modules are your own. Only you and System Administrators can see them.
