

RECOVERY NETWORK
when anyone, anywhere, reaches out for help

Pilot in 24 Hours — Measurable in 30 Days

Strategic Sourcing / Procurement / Innovation Lead

A 90-day blueprint for clinical and financial validation.

The era of long-term software pilots with no clear end date is over. Recovery Network is built for facilities that demand immediate deployment and measurable ROI without the rip-and-replace risk of legacy systems. We offer a Tier 1 entry point that allows you to activate the full platform for \$8,000 per month with a ninety-day upfront commitment. If the P-Code Ledger does not demonstrate a measurable return on your investment by day ninety, we revisit the contract — that is the level of confidence we have in our architectural integrity.

ZERO-IMPACT IMPLEMENTATION

Our implementation strategy is designed for speed and technical sovereignty, going live in under twenty-four hours without requiring changes to your existing EHR or clinical workflows. We understand that your IT and clinical teams are already at capacity, so we built the platform to layer on top of your current environment. This non-invasive approach removes the primary hurdle to innovation, allowing you to start capturing data and preventing crises before the end of your first week. You keep your systems; we just make them smarter.

THE UNIT ECONOMICS OF RECOVERY

Point solutions scale with headcount, but Recovery Network scales with intelligence. By automating the Chief of Staff logic through our AI Council, we allow one clinician to handle the signal load of five, effectively decoupling your growth from your hiring challenges. The platform eliminates the hidden costs of recovery by identifying physiological drift eleven days before a traditional relapse occurs. Every save is quantified, providing your finance team with a clear line of sight into the avoided costs of readmissions and adverse events.

PAYER RELATIONSHIP ACCELERATION

The primary barrier to high-value payer contracts is the lack of defensible, attributed outcome data. Recovery Network solves this by providing a continuous stream of exportable evidence through the P-Code Ledger. This allows your business development team to walk into negotiations with a verified track record of success and a 95% readiness accuracy rate for discharged patients. We provide the data that turns a standard facility into a preferred provider, accelerating your revenue cycle and stabilizing your payer mix.

SOVEREIGN LONG-TERM VALUE

Investing in Recovery Network is an investment in your organization's own data sovereignty. Our three-tier architecture ensures that your data remains isolated, secure, and available in our 10-year vault for long-term compliance and research. As the AI Council learns from your specific facility's patterns, the system becomes more tailored to your unique clinical mission. This is a self-improving asset that increases in value every day it is deployed, ensuring that your organization remains at the forefront of the behavioral health industry.

Don't just buy a platform — buy the proof that your mission works
