Subject: Queries regarding the design guidelines and standards that the PhilRice CES facility follows

Greetings!

Your request for your undergrad thesis studies was forwarded to our office here at the Physical Plant Division of PhilRice-CES.

Regarding your queries on the architectural or design guidelines and standards of the facilities for PhilRice Central Experiment Station, the PhilRice facility complex caters for the needs of its Research & Development Sector (R&D) and its General Administrative & Support Services (GASS).

For the R&D sector, laboratories, research fields, screen houses, warehouses, processing sheds, training facilities, etc. are provided; and offices, motor pool & operations building, etc. for the GASS sector. Recreational and staff housing facilities are also included.

Each facility follows the design principles and guidelines that are applicable to its type and must also comply to with the requirements and standards of national and local laws and ordinances that are applicable to its use, for example the National Building Code, National Structural Code, National Electrical Code, National Plumbing Code, Accessibility Law and the like. These design guidelines and standards can be found in written sources like books, and websites.

If you have further inquiries regarding this matter, you can contact and visit our office here at the Physical Plant Division office of PhilRice-CES.

We do hope this has been helpful in your studies.

Thank you very much!

Grace Evangeline M. Piaga
