SUMMONS CERTIFICATION

I, James P. Hagg, Vice President Professional Surgeon Number #750,
do hereby certify that this act of service was prepared and
perfected in accordance with the provisions of the Illinois
Professional Service Act and I certify that the foregoing is a
true and correct copy of the original as the same appears
in the records of the Illinois Professional Service Board.
I am a duly qualified and duly licensed Professional Surgeon
under the Illinois Professional Service Act and I am duly
qualified to perform the duties of a Professional Surgeon
under the Illinois Professional Service Act.

PHYSICS 101: UNIT 11: ELECTRICITY

1. The electric field E is defined as the force F per unit positive charge q at a point in space. Write the equation for E in terms of F and q .

2. A point charge Q is located at the center of a spherical shell of radius R . Calculate the electric field E at a point outside the shell (distance $r > R$ from the center).

3. A uniform electric field E is directed along the positive x-axis. A positive charge q is moved from point A to point B along the x-axis. Calculate the work done by the electric field.

4. A parallel plate capacitor has two plates of area A separated by a distance d . The plates are connected to a battery with voltage V . Calculate the capacitance C of the capacitor.

5. A series circuit contains a battery with voltage V and two resistors with resistances R_1 and R_2 . Calculate the current I flowing through the circuit.

6. A parallel circuit contains a battery with voltage V and two resistors with resistances R_1 and R_2 . Calculate the total current I flowing from the battery.

7. A resistor with resistance R is connected to a battery with voltage V . Calculate the power P dissipated by the resistor.

8. A series circuit contains a battery with voltage V and three resistors with resistances R_1 , R_2 , and R_3 . Calculate the voltage drop across each resistor.

9. A parallel circuit contains a battery with voltage V and three resistors with resistances R_1 , R_2 , and R_3 . Calculate the current through each resistor.

10. A series circuit contains a battery with voltage V and a resistor with resistance R . Calculate the energy U stored in the resistor.
