QUALITY OF KAWASAKI SPORT WITH PASSION

INTRODUCTION

A

Kawasaki Sports Industry was founded in 1915 and is one of the World's leading brands for Badminton and Tennis series.

Shenzhen Chuanqi (Kawasaki) Sports Co., Ltd., was established in 2002, is an international sporting goods company. It's R & D based in the Asia Pacific region. It mainly specializes in tennis & badminton sporting goods such as badminton racket, tennis racket, sportswear, sports shoes, shuttlecocks and bags etc.

In 2009, The international top badminton coach Li Mao was invited as the global technical consultant of Kawasaki.

In 2013, Chuanqi (Kawasaki) established Kawasaki International Badminton Club in Malaysia.

In 2014, Kawasaki International Badminton Club moved to Shenzhen, China.

The company's development concept is pro active and has been leading in badminton field.

COMPANY VISION

B

Being An Outstanding Sports Enterprise in Sports Industry.

COMPANY MISSION

C

Bring healthy and happy life to people, and make contributions to social progress.

COMPANY SPIRIT

D

HONESTY, INNOVATION, EFFICIENCY, COOPERATION

HONESTY: Reliable and Modest

INNOVATION: Creativity and Unique

EFFICIENCY: Practical and Implementation

COOPERATION: United and Win-Win

BRAND CULTURE

SENSE OF VALUE

E

D&R, production and selling top quality products for customers.

Honesty, reliability and modesty are our important moral values.

Keeping on innovating and improving is the source of our company development.

Trying our best to offer our customers and partners best service. Exceeding their EXPECTATIONS is our most important duty.

Respecting everyone, cooperating with sincerity and creating a better world to live together.

History of

2025

Today,the fifth generation "Kawasaki" Carbon Technology is used to create world's top rackets, which are used by world's top players

2020

Players Malkov won the championship in Russian championship.
Players Sheng Xiao Dong won the championship in Iran international challenge.

2019

Kawasaki badminton Global Technical Consultant
Head Coach of Men's singles of China Badminton Team.

Kawasaki brand signed "Henan badminton team"

2015

Kawasaki 100 Years Birthday

Kawasaki brand already has 100 Years history.

2013

Foundation of Kawasaki International Badminton Club

Kawasaki established kawasaki International Badminton Club in Malaysia.

2017

Kawasaki player Malkov Vladimir won silver medals in 2017 Russia Open and 2017 European Championships.

2002

Kawasaki Foundation in China

Kawasaki Set up China Oversea agent.

1973

The Creation of Carbon Racket

In 1973,the world first carbon racket named "Ruler" was created by kawasaki,which opened a new era for whole carbon racket industrial.

1972

Foundation of Korean Factory

Kawasaki established Korea Kawasaki Co.Let to Produce more rackets,with quantity over 3,000pcs monthly. During that period,Kawasaki had total 250,000pcs rackets produced in Japan,Taiwan and Korea every month,and was the top producer in the world.

1968

Foundation of Taiwan Factory

Kawasaki established Taiwan kawasaki Co.Ltd to produce more rackets,with wooden rackets quantity over 100,000pcs and Aluminum rackets over 30,000pcs monthly.

1963

Foundation of Japanese Factory

Kawasaki established Kawasaki Racket Co.Ltd to produce wooden rackets in Saitama Prefecyure of Japan,and set up Tennis and badminton rackets production system.

1960

Global Promotion

Kawasaki has established agents in Singapore, Denmark, Switzerland.

1915

Brand Foundation

Kawasaki Brand was founded in Tokyo by カワサキ, きもら きちた ろ う in 1915,and then started to produce and sell wooden rackets.

TECHNOLOGIES IN RACKET STRUCTURE

BOX frame

The box frame, which optimized through computer simulation testing, strengthens the sweet spot to form a strong and explosive sound. The racket frame is not easy to shake and twist, shortens the hitting time, and maintains a strong and effective explosive power.

HEXAGONAL frame structure

Through mathematical model analysis, we have created a new hexagon frame structure based on traditional stable frame, which makes the racket surface is more stable with sharper feeling.

AEROFOIL frame

Rounded smooth airfoil structure can efficiently reduce the powerful wind-breaking and improve swing speed.

TRAPEZIUM frame

The sharp trapezoidal structure helps users to improve swing speed, and effectively enhances the structural strength of the racket frame, allowing the users to control balls more precisely and hit them more accurately.

HEXAGONAL frame

Provide powerful wind-breaking support which enhances the racket strength effectively, and improves the accuracy of controlling and hitting.

2in1 frame

On the basis of the hexagonal structure frame providing wind-breaking support, combined with a sharp trapezoidal structure, the structural strength of the cypress frame is effectively increased, the hitting torque is reduced, and the stability and durability of the racket surface are improved.

3in1 frame

The three-section structure with different shapes perfectly combines the solidity of the box frame and the wind-breaking feeling of the trapezoidal frame. It takes into account the characteristics of stability and low air resistance. The 3 in 1 frame enriches the diversity of offensive means for athletes and amateurs, conforms to the technical and tactical environment of high-speed confrontation, and is a mainstream high-end frame design.

RUSH

The innovative four molding structure is a newly developed method highly suitable for offensive rackets. The racket frame is independently internally foamed, and the built-in solid carbon T head and the middle rod of the racket are independently formed. After the separately formed parts are assembled into a whole, a new type of steam high-pressure forming machine is used again to form a complete racket embryo. With this innovative molded badminton racket, the carbon fiber is more strong when smashing the racket, which makes fast speeding of the ball and flexible experience.

ELASTIC SHAFT IN 360° MULTI-DIRECTION

In the production process of the shaft, steel core with ultra-high vertical accuracy and smooth surface manufactured by high-precision machine tools, wrapped Japanese original carbon forming. The whole shaft combined with multi-angle carbon and the surface of carbon yarn. And use high-precision "Centerless" grinding machine to polish the outer shaft. The middle shaft thickness was well made by exquisite production. And it also has excellent performance of 360° elasticity.

Turbo Power

Optimize the eddy current wind resistance produced by the traditional wire groove in the swing, enhance the reaction speed and explosive force of the racket frame to the wire bed. At the same time, the curved wire groove has a natural physical R angle to help disperse the concentrated stress generated by the traditional right-angle wire hole. The body's tensile strength is stronger, the effective sweet spot of the thread bed is larger, and the effective return rate is improved.

T-JOINT POWER 2.0

Torsion resistance plays a significant role in smashing and controlling. The update T-joint 2.0 version adapts advance mechanical design combined with high modulus carbon fiber, which makes the connection between the shaft and the frame more tight, enhancing the stability and torque resistance of the racket, comprehensively improving the explosive power of smashing and the accuracy of control.

T-JOINT POWER

Torsion is one of most important data for rackets level. King Series racket use Special T technology, shaft and frame connected seamlessly, which improves 35% of rackets torsion, smashing power more directly with clear sound, the racket surface is super stable, comprehensively improving the accuracy and explosive power of the racket.

MECH FRAME

Mech reinforced composite racket frame is developed after multiple tests through computer simulation to calculate the power area and directions when racket face is in impact, and can form support force automatically, with more stable, powerful and accurate characters for hitting.

6.0mm shaft

The ultra-fine shaft, made of high rigid carbon fiber and combined with centerless grinding technology, brings a faster speed and a more delicate and flexible feel.

n-bone

It has higher stability and power. The clever mechanical design combined with high modulus carbon fiber effectively transmits energy to the badminton. The middle shaft is more closely connected to the racket frame, which enhances the stability and torsion resistance of the racket face, and comprehensively improves the explosive power of smashing and the accuracy of ball control.

n-bone

The "n-bone" racket handle connection process is a unique combination process of racket rod, front cover and wooden handle, and is a handle connection scheme of Kawai brand's internal process innovation. In the badminton racket with this technology, the combination height of the middle rod and the wooden handle of the racket is close, reducing the loss of power caused by the vibration and torsion of the racket rod.

CNPWC

CNPWC precision counterweight makes the offensive racket smoother when swinging continuously. The increased amount of carbon around the frame is more precisely distributed on both sides of the frame to improve the stability of the frame when hitting the ball.

Y-JOINT reinforced frame

The connection between the racket shaft and the racket frame adopts a "Y" shape, which fully utilizes the advantages of the high-torsion resistant linkage T head, and further improves the torsion resistance of the racket surface.

REINFORCED CORE

Shaft formed twice with inner and outer rings. Inner core is made of dense carbon fiber and shaft with such inner core has more powerful and stable character, which effectively improves shaft swing speed.

ATTACK CORE

The racket smash modeling design not only ensures the lightweight of the racket but also keep the rackets pressing force and wind breaking function, so as to enhance the racket smash power.

HIGH ELASTIC SHAFT

With high elastic carbon fiber, the shaft of racket has good rebound performance, which can improve hitting feel when smashing.

SUPER LIGHT

Use high quality carbon fibre with high intensity to ensure the racket is both lightweight and strong. The ultra-light racket helps to improve player response time.

TECHNOLOGICAL MATERIALS OF RACKETS

VACUUM PRESSURE FORMING

The newly developed vacuum pressure high temperature molding process in 2020 breaks through the traditional racket molding method. The racket is molded in a vacuum box to avoid the mixing of air bubbles when high-quality carbon fiber is combined with nano-resin. The carbon fiber of the racket is tighter, the power transmission is cleaner and the loss rate is lower, which effectively improves the explosive power of the racket.

KERNEL POWER

By using super high polymer into frame inner instead of traditional pressure expansion, the high polymer is transformed to strong inner power with cushioned structure under high temperature and pressure, and in a vacuum pressure, which can effectively improve racket strength, and with more stable hit, and reduce racket vibration frequency as well.

DENSE CARBON FIBER

Imported Japanese Toray dense carbon fiber, with smaller deformation character, preventing carbon fiber viscosity, combination, and surface defects, which largely increases overall strength and toughness of the racket, and effectively reduces racket broken rate, and with better hitting sound.

FULLERENE CARBON

This Racket has added fullerene carbon to reinforce the frame. Fullerene is a newly discovered industrial material, with its stiffness even stiffer than diamonds, and Ductility and Malleability are 100 times higher than steel. Rackets with Fullerene carbon are stiffer, less torque, and with faster rebound speed and sharper hitting sound.

GRAP SHAFT

Graphene is a kind of hard material, and the shaft made by it with carbon bar has high elasticity and toughness properties.

INFINITE MOEBIUS SHOCK ABSORPTION

In the stress concentration area of the racket, the "KRABON" cushioning damping material from Germany is applied to help buffer and disperse the excessive force to carbon bar layers and improve its high tension ability. The excellent shock absorption performance of the material also helps to improve the aftershock frequency after the racket smash and improve the comfort of the racket.

HI-MODULUS GRAPHITE

The best high-density carbon fibre material available. It has superior mechanical properties, high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

HI-MODULUS GRAPHITE

Special high-density carbon fibre with superior mechanical properties: high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

HI-MODULUS GRAPHITE

High-density carbon fibre with superior mechanical properties: high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

HI-MODULUS GRAPHITE

Lightweight and high strength carbon fibre. Provides superior strength for the racket while doing so by controlling the weight of the racket.

HI-MODULUS GRAPHITE

High-performance carbon technology with unique properties of super-elastic feel and super-tough critical point. Kawasaki laboratory strictly controls the carbon nanotubes added to the resin by rearranging the special layered structure graphite. While ensuring fast rebound feel and excellent comfort, the weight-to-strength ratio is maximized, and the poundage can cover more than 30 pounds.

GRAPHENE

Graphene is one of the world's thinnest and most rigid nano materials, representing the world's leading scientific and technological crystallization. The racket frame makes use of the optimal combination of graphene and carbon fibre technology to greatly enhance both the strength and resistance of the racket.

HOTMELT TECHNOLOGY

Carbon yarn is made by hotmelt technology to help make the nano resin more evenly distributed.

NANO TECHNOLOGY

Resin materials at a nano level are used to allow the resin particles to penetrate into the gaps of the carbon material evenly. This strengthens the structure of carbon material to make the frame of the racket withstand greater pull.

COMPOSITE CARBON

By selecting material with different physical properties to balance racket stiffness and toughness, and improve its comprehensive performance.

AIR BOOM

Based on the traditional hexagonal wind-breaking racket frame, a new "aerodynamic boost" hexagonal frame structure has been developed. Through precise calculation simulation and testing, a special shape is added to the traditional racket frame.

MWCNTS

Mitsubishi high-strength and high-modulus carbon fiber has a balanced modulus and strength performance. The racket made of Mitsubishi high-strength and high-modulus carbon fiber is both hard and soft, crisp and elastic, and has excellent comprehensive performance.

TAILIN CARBON FIBER

TAILIN carbon fiber, which needs higher carbonization temperature, finesspinning and longer oxidation time, and which has the characteristics of lightweight and high strength, ensuring that the racket is lightweight and has high strength and rigidity at the same time.

GRAPHITE MICROCRYSTALLINE FIBER

Graphite microcrystalline fiber combining with new generation epoxy, with stronger tensile modulus ratio and strength to withstand rigorous dynamic testing (such as high temperature and high tension, hitting, dropping) to ensure the racket durability.

MITSUBISHI HIGH-STRENGTH AND HIGH-MODULUS CARBON FIBER

Mitsubishi high-strength and high-modulus carbon fiber has balanced modulus and strength performance. The racket made of Mitsubishi high-strength and high-modulus carbon fiber is rigid and flexible, brittle and elastic, and has excellent comprehensive performance.

HOTMELT

High polymer nanoscale hot melt glue is easier to penetrate into the internal structure of carbon fiber than traditional hot melt glue, and fully bonding the carbon fiber to make the overall structure of the racket tighter and stronger.

WOVEN TECHNOLOGY

Aircraft-grade woven materials. It is woven with high modulus coefficient of carbon fibre and nano-epoxy resin. The technology provides the racket with superior stability and allows the racket to be in equilibrium at all angles of force.

A2ir Boom

"AIR BOOM"

The development of "secondary acceleration" is inspired by the pressurization principle design of the sports car tail. Based on the traditional hexagonal wind-breaking frame, we developed a new hexagonal frame structure with pneumatic pressurization. Through precise calculation, simulation and testing, we added a special shape to the traditional frame structure.

1015 SHUTTLECOCKS SERIES

< 2025 NEW PRODUCTS >

SHUTTLECOCKS

Details determine success or failure

Selection of top quality feather from duck and goose
Thick feather ,steady ,accurate landing ,more durable

The string ring neat string ring
Fine workmanship, moderate glue coverage, increase the durability and steady flight performance

Imported glue
Unique imported glue to ensure the durability and stability.

Strong and thick feather
Selected strong and thick feather

Natural cork
Good elasticity, durable , suitable for different needs

Details determine success or failure

1

Manufacture according to extremely fine and strict production process, to make sure that each badminton weighs the same.

5g
10g
15g

One of the basic requirements to badminton ball is the suitable weight, or the player could not fully exert his skills.

2

Strictly implement the badminton international standard size so that you could exert best in the game.

about 6.6cm
about 8.3cm

The speed of badminton ball has great relationship with its weight and caliber size.

After the test, in the same environment, when badminton is about 8.3 cm long and the aperture size is about 6.5 cm, the ball has the most ideal speed.

3

The unique glue formula to ensure the resistance to fight and flight stability.

KAWASAKI
ORDINARY

Kawasaki badminton has much glue and strong enough to ensure it is durable.

But common badminton has little glue and not strong enough to play.

4

The whole raw footage and the ball head are coaxial to be sure the ball flies more stable.

The whole raw footage and the ball head are coaxial, which is the base to ensure the badminton flies stable.

5

full ring
large square
medium square
small square
humpbacked

8

The feather is arranged neat

All pieces of feather are in the same length and evenly spaced to ensure the flight is more stable.

6

Finely manufactured with proper glue covered to strengthen the performance of the resistance to fight and flight stability.

Coil is meticulous and tidy

7

Choose thick and strong feather for each piece of Kawasaki badminton.

The tether is thick and strong

9

Sheepskin membrane and ball head inside are wrapped solidly

Sheepskin membrane
White fixtures is glue

The head of ball is wrapped with sheepskin membrane to make the feather more tight, which is sure of the ball is durable.

10

There are multi head for Kawasaki badminton to choose to adapt to the needs of different players.

Thru-matching cork
Composite cork
Natural cork

Different types of ball heads to meet different requirements.

11

In the whole head of ball, ratio of the cork and the fiberboard is the best ratio of the head, which could allow the badminton play a good role in elastic and durable.

About 2.47cm
About 1.25cm
About 1.22cm

The ball head is standard sphere to ensure the stability of flight and avoid swing.

KSB-63TI	
NEW	
Name	Badminton strings
Color	☐ ☐ ☐ ☐ ☐
Length	10m
Guage	0.63mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	KEVLAR ultra strong nylon reinforced with special fibers, ultra-fine elastic oval shaped multifilament bundle fibers.
Advantages	Provides a refreshing and highly elastic hitting sound; More suitable for players who pursue high elasticity and cool sound, suitable for both offense and defense

KSB-65TI	
Name	Badminton strings
Color	☐ ☐ ☐ ☐
Length	10 m
Guage	0.68 mm
String core	High strength elastic multifilament fiber
Surface	Superfine elastic multifilament woven fiber bundles
Drape	Novel hydrogen titanium alloy and elastic resin
Characteristic	The high strength elastic multifilament fiber as the base line center, the outer material is the superfine elastic multifilament woven fiber bundles, with excellent elasticity, crisp and strong ball hitting sense, the coating layer adopts hydrogen titanium alloy technology, providing first-class shock absorption, wear resistance and high elasticity.

ELITE 61/ELITE 65	
Name	Badminton strings
Color	☐ ☐ ☐
Length	10m
Guage	0.61mm/0.65mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	High shrinkage elastic multifilament fibers
Advantages	Moderate elasticity and feel Sound well when hitting Smooth surface, easy for strings

KSB-80	
Name	Badminton strings
Color	☐ ☐ ☐ ☐
Length	10 m
Guage	0.68 mm
String core	Strong flexibility multifilament fiber
Surface	Special flat monofilament fiber mixed with ultra-fine elastic fibers
Drape	wear-resistant elastic resin
Characteristic	The core basicaly made with systolic high strength elastic filament fiber, the outer with special flat monofilament fiber to cross weave in average, the special material can provide the high elasticity and sonorant performance, the outermost layers, with resistance to impact and friction of elastic resin to complete only the surface.

KSB-68	
Name	Badminton strings
Color	☐ ☐
Length	200m
Guage	0.70mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	High shrinkage elastic multifilament fibers
Advantages	Moderate elasticity and feel Sound well when hitting Smooth surface, easy for strings

KSB-68	
Name	Badminton strings
Color	☐ ☐ ☐
Length	10 m
Guage	0.70 mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	high shrinkage elastic multifilament fibers
Characteristic	Core of the string with high strength of Multifila-ment fiber, outer with strong multifilament fiber as the double cross woven, and provide excellent elastic feedback, the outer covering, the elastic resin impact resistance and friction resistance to surface coating

PROFESSIONAL MASTER LEVEL KES-830 BADMINTON COMPUTER CONTROL STRING MACHINE

KES-900 MAX Badminton and Tennis Electric Stringing Machine

Specification : Tennis and Badminton general frame, Intelligent-straight pull type, patented detachable electronic box, pull-head touch button, low outer aluminum alloy bottom plate, semi-hidden drawer, adjustable turntable damping, external adjustment gravity clamp base.

Patent : Patented gyro stringing reel, adjustable frame oscillating damper, adjustable angle frame support, patented automatic pop-up damp base, lightweight aluminum tripod, high-sensitivity touch button, patented retractable Turntable pillar, free hand-adjustable gravity clamp base.

Features: LED operation panel, intelligent control stringing puller, Big arm frame system, easy operation;
Accurate tension setting, from 11-45LB (5-20KG), precision of 0.1LB/KG, 4 sets of pounds of memory; Kg/lb quick change button;
The three-speed stringing speed can be selected, and there is a special button for knotting;
Accurate tension setting, 11-89LB (5-40KG), precision of 0.1LB/KG, 9 sets of pounds of memory. High-tech hard anode surface of the string clamp, good damping force and not easy to hurt the string, suitable for various specifications of string diameter;
Gear brake system, fast and stable;
Independent telescopic boom system, which can adjust the telescopic arm separately to the safest six-point fixed to prevent the racket deformation;
The height of the machine can be adjusted from 90cm to 120cm;
Machine external discharge electronic box, general power supply, suitable for voltage 110V~240V.

Movable pole

Model:	KBP 03
Materials:	Iron
Color:	Yellow
Height:	155cm
Specification:	49 x 30 x 10cm
Weight:	80kg

Movable pole

Model:	KBP 08
Materials:	Iron
Color:	Yellow
Height:	155cm
Specification:	48 x 34 x 11cm
Weight:	160kg

Badminton court

Model:	KPL 4.5
Grain:	Lichy type
Color:	Green
Thickness:	4.5mm / 5.0mm
Specification:	1.8m x 15m / 4 slice (7.2m x 15m)
Weight:	90kg x 4

Surface: PVC surface anti-skid,wear-resistant, comfortable, suitable for professional badminton tournament.

Middle : Special spinning process, 100%polyester fiber fabric, water absorption, prevent deformation.

Under layer: High resilience

Badminton court

Model:	KPS 5.0
Grain:	Crystal
Color:	Green
Thickness:	4.5mm/5.0mm/6.0mm/7.2 mm
Specification:	1.8m x 15m / 4 slice (7.2m x 15m)
Weight:	110kg x 4

Surface: PVC surface anti-skid,wear-resistant, comfortable, suitable for professional badminton tournament.

Middle : Special spinning process, 100%polyester fiber fabric, water absorption, prevent deformation.

Under layer: High resilience

Badminton net

Model:	B12
Materials:	Nylon
Color:	Brown
Mesh size:	1.8 x 1.8cm
Specification:	610 x 76cm
Weight:	380g
