Artificial Intelligence Safety Care Service for children with developmental disability

* Max 5 guardians can be enrolled at AVAdin friends

01

AVAdin Infant Core Features

Chatbot Function

The best friend, AVAdin Infant! AVAdin doesn't get bored and responds even if you talk to it 100 times! AVAdin helps children develop their language through free conversation based on artificial intelligence.

Play songs, YouTube

Play various content easily with voice commands. "Hey AVAdin, play me a YouTube video!" AVAdin will show you the video content without complicated procedures.

Developmental Disability Specialized Program

AVAdin provides specialized functions for children with developmental disabilities through language quizzes such as mimicking words, asking words, and step-by-step social skills programs.

Video call / Monitoring emergencies

Even if you're far away, you can talk face to face to seniors in a clear image. When AVAdin Infant notifies you of an emergency, you can check the child through monitoring. If you are absent, AVAdin Infant will call and report to the control center

02

Fusion of AI and IoT Sleepband

CES (Cranial Electrotherapy Stimulation)

Improves pain such as anxiety, depression, and stress by transmitting microcurrents to the cranium.
