

Stabicad 24.09 release

Release Notes United Kingdom (UK)

This version contains several improvements:

- In version 24.07 there was a bug reported that openings could not be created automatically by loading a clash report. This issue is now solved so openings can be placed again on three ways:
 1. Manually placement
 2. Create openings based on selection
 3. Create openings based on an interference check
- After running a heating & cooling cloud calculation, heating & cooling batteries would not receive a section coe and index run parameter. This has been fixed.
