

AIFA makes traditional home appliances smarter with i-Ctrl -Winner of German Design Award 2020!

Founded in 1993 based in Taiwan, AIFA combines its core technology in universal remote control database and IC with the latest smart home trend and developed an award-winning product i-Ctrl-Wi-Fi remote control. AIFA has its strength in iOS App, Android App, Wi-Fi module and Wi-Fi firmware, infrared database IC and cloud services, these 5 core technologies in the i-Ctrl smart home device are all developed by AIFA in house.

Traditional remote control only functions when you are at home. i-Ctrl can control home appliances anywhere and anytime, easy to set up and user-friendly, it enables smart control for all traditional devices with unlimited remote control range from your smartphone to your house using 3G/4G internet. Build-in schedule and macro functions allow you to customize for your personal schedule.

You can also use voice through Google Home (Google Assistant) or Amazon Echo

(Alexa) to control home devices with i-Ctrl. i-Ctrl is on a mission to make traditional home appliances smart.

“AIFA aims to provide the best product that can enhance the convenience of people’s lives.” With 26 years of designing, developing and manufacturing experiences, AIFA has been providing services to many major electronics brands in Japan, Germany and around the world.

At CES 2020, AIFA partnered with Google to demo voice control with Google Home in our booth. If you are in the US, please come to our booth. We are looking for partners to collaborate in the booming AIoT industry.
