Flick pest controllers

Dear responsible person

Amgrow Pty Ltd declares that the registered product labelled as “Flick An Anticimex Company Fipronil 100 SC Termiticide & Insecticide” APVMA Approval No : 89141/138488 is not constrained to be used in just Camilleri underslab and perimeter and Altis perimeter systems.. The newly registers label states

APPLICATION

Treated zones to protect both new and existing buildings may be installed using a combination of conventional spraying and trenching and approved reticulation systems. Spray equipment should be calibrated to deliver a low-pressure high-volume coarse spray.

It is recommended that the minimum thickness of any treated soil treated zone is 80 mm.

Treated zones that have been disturbed by construction, excavation and other soil disturbing activities will need re-application to restore site to original condition.

Kind regards,

A handwritten signature in black ink, appearing to read "S Boyle".
