About Me

I have been building things on the web since 2010 and have had the advantage of working with people in a variety of industries. My core competency is in web technology, specifically in full stack django development. I am currently looking for a full time role

(Freelance 2010 to present)

There are a number of projects not listed here. When I first got started in programming I was doing a lot of work for a lot of different people. I still continue to do a little bit of freelance work, but it is not my primary focus.

Pay Igniter (2012)

<http://payigniter.com/home.php>

Environment: PHP, MySQL, JavaScript, html, css

- Responsible for interface design and development
- Created wireframes by gathering requirements from the client
- Built JavaScript heavy interfaces using a client side templating library called handlebars.js
- Communicated with the development team to determine what data the API endpoints needed to return

Austin Board of Realtors (2013)

Environment: python, django, html, css, JavaScript, postgresql, centos, SOAP integration.

- Built authentication system that integrated with a SOAP service (membersuite) for an internal portal used to manage realtor signups.
- Provided technical design consulting for the project.

Edgecase Labs (2014)

Environment: html, css, javascript, jquery, django, python, linux, postgresql

- complete projects that are based around the django framework.
- consulting to discuss strategy with future projects
- Worked mostly on the following projects as a subcontractor:
 - <http://houston.culturemap.com/>
 - <http://libertyproject.com/>
 - <https://urbanleasing.com/>

Samsa (2018)

Environment: python, django, django rest framework, aws, docker, react.js, rabbitmq

- Worked on setting up a devops workflow using docker and aws
- Developed user interface features using react.js and redux
- Developed a serverless docker monitoring system using cadvisor and aws lambda

Full Time Roles:

Pinogy

From 1/16 to 8/16

Environment: html, css, javascript, jquery, django, python, docker, django cms

- Built multiple addons for their django cms website platform
- Built and designed an admin dashboard for their customers by integrating with multiple REST api services that connected their systems together in one spot.

Interline

From 8/16 to 4/17

Environment: django,javascript, html, scss, vagrant, wagtail cms

- Broke out all of their code into packages and refactored to make their django apps reusable across multiple websites
- Worked on front end development

Physicians Insurance

From 4/17 to 12/17

Environment: django, javascript, html, less, vagrant, django cms

- Converted calculations previously done in excel spreadsheets to python methods in a class for calculating premiums
- Architected a development workflow so they could hire and manage developers more easily
- Worked on their new website using django cms
