### Part I General Aspects of Systems Science

#### The Dynamics of Knowledge and Ignorance: Learning the New Systems Science

*P. M. Allen* . . . . . 3

1	Complexity, Simplicity and Knowledge . . . . .	4
1.1	The Assumptions Used to Reduce Complexity to Simplicity . . . . .	4
1.2	The Modelling Outcomes of Different Assumptions . . . . .	6
2	Models and Knowledge: Simple to Complex . . . . .	6
2.1	Equilibrium Models . . . . .	7
2.2	Non-Linear Dynamical Models . . . . .	7
2.3	Self-Organising Systems . . . . .	8
2.4	Evolutionary Complex Systems . . . . .	9
2.5	The General Structure of Modelling . . . . .	16
3	Innovation and Design in Complex Systems . . . . .	18
3.1	A Stochastic Dynamics of New Ideas . . . . .	19
3.2	Exploring, Generating Knowledge and Hill-Climbing . . . . .	21
3.3	Trust, Experience and Chance . . . . .	25
4	The Law of Excess Diversity . . . . .	26
5	Conclusions . . . . .	28
	References . . . . .	29

#### Chaos, Computability, Determinism, and Freedom: A Critical Analysis from a System-Theoretic Point of View

*Theodor Leiber* . . . . . 31

1	Introduction . . . . .	31
2	Deterministic Chaos and Its Epistemological Implications: Determinism vs Determinability/Computability . . . . .	33
3	Chaos Research, Quantum Theory, and Freedom . . . . .	38
4	System-Theoretic Determination Model of Action-Decision- Freedom, Neuronal Realization, and Responsibility . . . . .	40
5	Conclusions and Summary . . . . .	47
	References . . . . .	49

<b>The Function of Systems Concepts – From Systems Theory to Systems Science</b>	
<i>Eberhard Umbach</i> . . . . . 51	
1	Formulation of the Problem . . . . . 51
2	Historical Aspects . . . . . 52
3	Priorities of Systems Concepts with Different Authors . . . . . 55
4	Criticism of Systems Concepts . . . . . 56
4.1	Some Critical Authors . . . . . 56
4.1.1	Ida Hoos (1972) . . . . . 56
4.1.2	Robert Lilienfeld (1978) . . . . . 57
4.1.3	Czayka (1974) . . . . . 59
4.1.4	Kappel and Schwarz (1981) . . . . . 60
4.1.5	Klaus Mueller 1996 . . . . . 61
4.2	Summary of the Aspects of Criticism . . . . . 65
5	Evaluation of Criticisms . . . . . 67
6	Conclusions for Systems Science . . . . . 69
	References and Further Reading . . . . . 70
 <b>Fuzzy Aspects of Systems Science</b>	
<i>William Silvert</i> . . . . . 73	
1	Introduction . . . . . 73
2	What is Fuzzy Set Theory? . . . . . 74
3	Some Applications of Fuzzy Set Theory to Systems Issues . . . . . 75
3.1	Remote Sensing . . . . . 75
3.2	Ecological Examples . . . . . 75
3.3	Classification of Environmental Impacts . . . . . 76
3.4	Evaluation of Ambiguous Data . . . . . 77
3.5	Simplification and Clarification . . . . . 78
3.6	Fuzzy Control . . . . . 78
3.7	Forecasting . . . . . 79
3.8	Fuzzy Classification and “Lumping” . . . . . 80
4	Summary . . . . . 81
	References . . . . . 81
 <b>Part II Biological Systems</b>	
 <b>On the Phenomenon of Bimodality in Aggregation Pattern Dynamics</b>	
<i>E.G. D'Ambrogio</i> . . . . . 85	
1	Introduction . . . . . 85
2	The Reaction-Diffusion Model . . . . . 86
3	The Stochastic Model . . . . . 88
4	The Combined Action of External and Natural Noise . . . . . 91
5	Conclusion . . . . . 92
	References . . . . . 94

<b>Parameter Estimation in Nonlinear Systems with Dynamic Noise</b>	
<i>Nico Stollenwerk</i> . . . . . 95	
1	Introduction . . . . . 95
2	Epidemic Models . . . . . 96
3	SI-Model with Demographic Stochasticity . . . . . 96
4	Analytic Solution for the SI Case . . . . . 97
5	Empirical Likelihood . . . . . 99
6	A First More Complex Test Case . . . . . 100
7	Summary and Prospects . . . . . 100
	References . . . . . 101
 <b>Spatial Pattern Formation in a Simple Model of Consumer-Resource System</b>	
<i>Alexander Bobyrev, Eugeny Kriksunov, Vladimir Burmensky, Horst Malchow</i> . . . . . 103	
1	Introduction . . . . . 103
2	The Model . . . . . 105
2.1	Resource . . . . . 105
2.2	Consumers . . . . . 105
2.3	Turbulent Mixing . . . . . 106
3	Results . . . . . 106
3.1	General Aspects of the Model Behavior . . . . . 106
3.2	Influence of the Parameters . . . . . 107
4	Discussion . . . . . 108
	References . . . . . 109
 <b>Scaling Laws for the Prey-Predator Interaction Rates</b>	
<i>Zhen-Shan Lin, Bai-Lian Li</i> . . . . . 111	
1	Introduction . . . . . 111
2	Basic Physical Model for Predating Processes . . . . . 112
3	Scaling Relations from Hydrodynamic Theory . . . . . 113
4	Scaling Relations from Kinematics and Biomechanics . . . . . 114
5	Scaling Relations from Kinetic Energy Consideration . . . . . 115
6	Conclusion . . . . . 117
	References . . . . . 117
 <b>Active Motion in Systems with Energy Supply</b>	
<i>Werner Ebeling, Frank Schweitzer</i> . . . . . 119	
1	Introduction . . . . . 119
2	Model of Driven Brownian Dynamics . . . . . 121
2.1	Equations of Motion and Energy Balance . . . . . 121
2.2	Non-Linear Friction Functions and Free Motion . . . . . 123
2.3	Stationary Solutions for the Distribution Function . . . . . 125
3	One-Dimensional Driven Dynamics Including Forces . . . . . 127
3.1	Motion in Linear and Ratchet-Like Potentials . . . . . 127

---

3.2	The Role of Interactions: Model of Dissipative Toda Chains . . . . .	131
4	Active Brownian Motion in Two-Dimensional Potentials . . . . .	134
4.1	Active Motion with Localized Energy Sources . . . . .	134
4.2	Motion of "Swarms" . . . . .	137
5	Discussion and Applications . . . . .	139
	References . . . . .	140

**Reconstruction of Human Liver Parenchyma  
with Computer Program**

A. Barbieri, R. Daccò, F. Grizzi, N. Dioguardi	. . . . .	143
1	Introduction . . . . .	143
2	Anatomical Principles of the Liver . . . . .	144
3	Materials and Methods . . . . .	144
3.1	Centripetal Attraction . . . . .	147
3.2	Cell Duplication . . . . .	147
4	Results . . . . .	150
5	Discussion . . . . .	150
6	Conclusions . . . . .	151
	References . . . . .	151

**Part III Ecological and Environmental Systems**

**Recent Developments in System Ecology**

S.E. Jørgensen	. . . . .	155
1	Introduction . . . . .	155
2	A Central Tentative Law of Ecosystem Theories . . . . .	156
3	The Relation to Other Theories . . . . .	163
4	Propositions and Ecosystem Properties . . . . .	165
5	Closing Remarks . . . . .	169
	References . . . . .	169

**GIS-Based Catchment Modeling**

M. Matthies, F. Pfäfflin, J. Berlekamp	. . . . .	171
1	Objectives . . . . .	171
2	Area of Investigation . . . . .	172
3	Determination of the Catchment Areas . . . . .	173
4	Rainfall-Runoff . . . . .	174
4.1	Rainfall . . . . .	174
4.2	Model Approach . . . . .	174
4.3	Evapotranspiration . . . . .	175
4.4	Sewage Water Discharge and Water Removal . . . . .	175
5	Nitrogen Impact . . . . .	176
6	Results and Discussion . . . . .	176
6.1	Rainfall-Runoff . . . . .	176
6.2	Nitrogen Impact . . . . .	178

7	Conclusion and Outlook . . . . .	179
	References . . . . .	180
 <b>Hybrid Low Level Petri Nets in Environmental Modeling – Development Platform and Case Studies</b>		
	<i>Ralf Seppelt, Marco-Michael Temme . . . . .</i>	181
1	Introduction . . . . .	181
1.1	Requirements of Environmental Modeling . . . . .	181
1.2	Concepts of Hybrid Model Development . . . . .	182
1.3	Aim and Scope of the Development . . . . .	182
2	Methodological Frame Work . . . . .	183
2.1	Hybrid Low Level Petri Nets . . . . .	183
2.1.1	Structure and Topology . . . . .	183
2.2	Functional Behavior . . . . .	185
2.2.1	Switching Conditions . . . . .	185
2.2.2	Stochastic Time Weighting and Ordinary Differential Equation Systems . . . . .	185
2.3	Development Platform . . . . .	186
2.3.1	Functionalities . . . . .	186
2.3.2	Simulation . . . . .	187
3	Case Study 1: Generic Modeling of Crop Growth . . . . .	188
3.1	Modeling of Crop Development . . . . .	188
3.2	Petri Net . . . . .	191
3.2.1	Structure and Topology . . . . .	191
3.2.2	Sub-Net: Physiological Stage Model . . . . .	191
3.2.3	Sub-Net: Crop Growth . . . . .	192
3.3	Results . . . . .	192
4	Case Study 2: Meta-Population in Island Biography . . . . .	194
4.1	Meta-Population in Island Biogeography . . . . .	194
4.1.1	Insular Zoogeography . . . . .	194
4.1.2	Reproduction . . . . .	194
4.1.3	The Galápagos Archipelago and the Blue-Winged Grasshopper .	195
4.1.4	Overlay of Map and Petri Net . . . . .	195
4.2	Results . . . . .	196
5	Discussion . . . . .	199
5.1	Concluding Remarks . . . . .	199
5.2	Outlook . . . . .	199
	References . . . . .	200
 <b>An Empirically Based Approach to Self-Organization in Forest Ecosystems</b>		
	<i>Martin Janssen . . . . .</i>	203
1	Introduction . . . . .	203
2	The Understanding of Forests as Self-Organizing Ecosystems in Historical Development . . . . .	204

3	The Forest Ecosystem Types as Statistical Ensembles Corresponding to the Attractors of Natural and Artificial Forests	206
4	The Identification and Modeling of Forest Ecosystem Types in a Multidimensional Ecological Feature Space	210
5	Applications to Forest-Ecological Research, Forest Monitoring, Forestry, and Land-Use Planning	217
6	Concluding Remarks: The Need to Use and to Protect Self-Organization Capacities of Forests	219
	References	220
 <b>Regional-Scale Groundwater Quality: Monitoring and Assessment Using Spatially Referenced Environmental Data</b>		
	<i>Stefan Fuest, Jürgen Berlekamp, Michael Matthies</i>	223
1	Introduction	223
2	Data and Methods	224
2.1	Monitoring	224
2.2	Nitrogen Balance	225
2.3	Hydrology	225
2.4	Nitrate Contents	226
3	Results	227
4	Discussion	231
4.1	Monitoring	231
4.2	Hydrology	231
4.3	Nitrogen Balance	231
4.4	Nitrate Contents	232
5	Conclusion	232
	References	233
 <b>Mathematical Aspects in the Modeling of Urban Environmental Quality</b>
