Contents

Preface v
Contributors xi

PART I. GENERAL TECHNIQUES

1 Proteomics and the Molecular Biologist 3
Paul R. Graves and Timothy A. J. Haystead

2 Protein Identification from 2-D Gels Using In Vitro Transcription Translation Products 17
Nathalie Norais, Renzo Nogarotto, Emilia Tiziana Iacobini, Ignazio Garaguso, Renata Grifantini, Giuliano Galli, and Guido Grandi

3 Selective Chemical Cleavage Methods in Proteomics, Including C-Terminal Successive Degradation 29
Akira Tsugita

4 Means of Hydrolyzing Proteins Isolated upon ProteinChip® Array Surfaces: *Chemical and Enzymatic Approaches* 59
Shanhua Lin, Ning Tang, and Scot R. Weinberger

5 A Combined Radiolabeling and Silver Staining Technique for Improved Visualization and Localization of Proteins on Two-Dimensional Gels 73
Jules A. Westbrook and Michael J. Dunn

6 Qualitative and Quantitative Proteomic Analyses via Multidimensional Protein Identification Technology 79
Michael P. Washburn and David M. Schieltz

7 Di- and Tri-Chromatic Fluorescence Detection on Western Blots 93
Karen J. Martin and Wayne F. Patton

8 Multiplexed Proteomics: *Fluorescence Detection of Protein Differences by Two-Dimensional Gel Electrophoresis and Computer-Based Differential Display* 107
Birte Schulenberg and Wayne F. Patton

9 A Strategy for Characterizing Antibody/Antigen Interactions Using ProteinChip® Arrays 117
Alexandra Huhalov, Daniel I. R. Spencer, and Kerry A. Chester

10 Stable Isotope Labeling with Amino Acids as an Aid to Protein Identification in Peptide Mass Fingerprinting 129
Robert J. Beynon

11 The Use of ^{18}O Labeling as a Tool for Proteomic Applications 145
Ian I. Stewart, Ty Thomson, Daniel Figeys, and Henry S. Duewel

12 Automated Nanoflow Liquid Chromatography/Tandem Mass Spectrometric Identification of Liver Mitochondrial Proteins 181
Bart Devreese, Frank Vanrobaeys, Elke Lecocq, Joél Smet, Rudy Van Coster, and Jozef Van Beeumen

13 *In Silico* Proteomics: *Predicting Interactions from Sequence* 193
Joel R. Bock and David A. Gough

PART II. POST-TRANSLATIONAL MODIFICATIONS, VARIANTS, AND ISOFORMS

14 Predicting Glycan Composition from Experimental Mass Using GlycoMod 225
Catherine A. Cooper, Elisabeth Gasteiger, and Nicolle H. Packer

15 Querying GlycoSuiteDB 233
Catherine A. Cooper, Hiren J. Joshi, Mathew J. Harrison, Marc R. Wilkins, and Nicolle H. Packer

16 New Tools for Quantitative Phosphoproteome Analysis 241
Li-Rong Yu, Van M. Hoang, and Timothy D. Veenstra

17 Computer-Aided Strategies for Characterizing Protein Isoforms 259
Frédéric Nikitin and Frédérique Lisacek

18 Protein Variant Separations Using Cation Exchange Chromatography on Grafted, Polymeric Stationary Phases 269
Michael Weitzhandler, Dell Farnan, Nebojsa Avdalovic, and Chris Pohl

PART III. SPECIFIC SYSTEMS

19 Noninvasive Imaging of Protein–Protein Interactions in Living Animals 283
Gary D. Luker, Vijay Sharma, and David Piwnica-Worms

20 Strategies in Clinical Proteomics 299
Eric T. Fung

21 Proteomic Profiling of the Cancer Microenvironment 309
Vladimir Knezevic and Michael R. Emmert-Buck

22 Identification of Determinants of Sensitivity to Antitumor Drugs 319
Paola Perego, Giovanni Luca Beretta, and Laura Gatti

23 Application of Proteomics to the Discovery of Serological Tumor Markers 331
Terence C. W. Poon and Philip J. Johnson

24 Infectomic Analysis of Microbial Infections Using Proteomics 347
Sheng-He Huang, Ambrose Jong, and James T. Summersgill

25 Toward a Complete Proteome of *Bacillus subtilis*: *Cytosolic, Cell Wall-Associated, and Extracellular Proteins* 357
Haike Antelmann, Jan Maarten van Dijl, and Michael Hecker

26 Renal and Urinary Proteomics 375
Visith Thongboonkerd, Elias Klein, and Jon B. Klein

27 Proteomics in Endocrinology 397
Jan W. A. Smit and Johannes A. Romijn

28 Proteomics in Plant Biology 409
Christina Mihr and Hans-Peter Braun

PART IV. DATA ANALYSIS

29 Bioinformatics in Proteomics 419
Mauno Vihinen

30 Quantitative Characterization of Proteomics Maps by Matrix Invariants 429
Milan Randić

31 Complexity of Protein–Protein Interaction Networks, Complexes, and Pathways 451
Danail Bonchev

32 Patchwork Peptide Sequencing: *Protein Identification by Accurate Mass-to-Sequence Conversion of High-Resolution Q-TOF Tandem Mass Spectrometry Data* 463
Andreas Schlosser and Wolf D. Lehmann

33 Estimation of Bias in Proteome Research 473
Ralf Mrowka and Hanspeter Herzel

34 Scoring Functions for Mass Spectrometric Protein Identification 477
Robin Gras, Patricia Hernandez, Markus Müller, and Ron D. Appel

Index 487
