Part I Univariate Distributions

1	Introduction	3
1.1	Aggregate Claims Distributions	3
1.2	Some Notation and Conventions	6
1.3	Classes of Distributions and Functions	7
1.4	Convolutions	8
1.5	Mixed Distributions	9
1.6	Compound Distributions and Functions	11
1.7	Some Useful Transforms	12
1.7.1	Definitions and General Results	12
1.7.2	Convolutions	14
1.7.3	Discrete Distributions	15
1.7.4	Compound Distributions	16
1.7.5	Extension to Functions	17
1.8	Some Useful Operators	17
1.9	Stop Loss Premiums	20
1.10	Convergence of Infinite Series with Positive Terms	25
2	Counting Distributions with Recursion of Order One	29
2.1	Geometric Distribution	29
2.2	Poisson Distribution	30
2.2.1	General Recursion	30
2.2.2	Application of Generating Functions	31
2.3	The Panjer Class	36
2.3.1	Panjer Recursions	36
2.3.2	Subclasses	39
2.3.3	An Alternative Recursion	43
2.4	Convolutions of a Distribution	45
2.5	The Sundt–Jewell Class	48
2.5.1	Characterisation	48
2.5.2	Recursions	50
2.5.3	Subclasses	51
2.6	Higher Order Panjer Classes	54
2.6.1	Characterisation	54
2.6.2	Shifted Counting Distribution	54
2.6.3	Counting Distribution with Range Bounded from Above	55

2.7	Extension to Severity Distributions in \mathcal{P}_{10}	56
2.7.1	Recursions	56
2.7.2	Thinning	58
2.7.3	Conversion to Severity Distributions in \mathcal{P}_{11}	59
3	Compound Mixed Poisson Distributions	65
3.1	Mixed Poisson Distributions	65
3.2	Gamma Mixing Distribution	67
3.3	General Recursion	68
3.4	Finite Mixtures	69
3.5	Willmot Mixing Distribution	69
3.6	The Counting Distribution	72
3.7	Invariance Properties in the Willmot Class	75
3.7.1	Introduction	75
3.7.2	Scaling	75
3.7.3	Shifting	76
3.7.4	Truncating	77
3.7.5	Power Transform	77
3.8	Special Classes of Mixing Distributions	79
3.8.1	Shifted Pareto Distribution	79
3.8.2	Pareto Distribution	79
3.8.3	Truncated Normal Distribution	80
3.8.4	Inverse Gauss Distribution	81
3.8.5	Transformed Gamma Distribution	82
4	Infinite Divisibility	85
4.1	Definitions and Properties	85
4.2	Characterisation	87
4.3	Mixed Poisson Distributions	89
4.3.1	Infinitely Divisible Mixing Distribution	89
4.3.2	Mixing Distribution in \mathcal{P}_{10}	91
4.4	De Pril Transforms of Infinitely Divisible Distributions in \mathcal{P}_{10}	92
4.4.1	Definition and Properties	92
4.4.2	Characterisation of Infinitely Divisible Distributions in Terms of De Pril Transforms	97
5	Counting Distributions with Recursion of Higher Order	101
5.1	Compound Distributions	101
5.2	Convolutions of the Severity Distribution	107
5.3	The \mathcal{R}_k Classes	108
5.3.1	Definitions and Characterisation	108
5.3.2	Compound Distributions	111
5.3.3	Distributions in \mathcal{P}_{10} on the Range $\{0, 1, 2, \dots, k\}$	112

5.3.4	Convolutions	112
5.3.5	Cumulants	119
5.4	Counting Distributions with Rational Generating Function	122
6	De Pril Transforms of Distributions in \mathcal{P}_{10}	127
6.1	General Results	127
6.2	The \mathcal{R}_k Classes	130
7	Individual Models	135
7.1	De Pril's Methods	135
7.2	Dhaene–Vandebroek's Method	137
7.3	De Pril's Individual Model	138
7.4	Collective Approximations	140
8	Cumulative Functions and Tails	149
8.1	General Results	149
8.2	Convolutions	153
8.3	Compound Distributions	154
8.4	De Pril Transforms	155
8.5	The Special Case $b \equiv 0$	156
9	Moments	161
9.1	Convolutions of a Distribution	161
9.1.1	Ordinary Moments	161
9.1.2	The Normal Distribution	165
9.1.3	Factorial Moments	167
9.2	Compound Distributions	168
9.2.1	General Results	168
9.2.2	Compound Panjer Distributions	174
9.2.3	Compound Poisson Distributions	178
10	Approximations Based on De Pril Transforms	181
10.1	Introduction	181
10.2	Extension of Results for Distributions	183
10.2.1	Key Result	183
10.2.2	Applications	185
10.3	Error Bounds	186
10.3.1	Main Result	186
10.3.2	The Dhaene–De Pril Transform	189
10.3.3	Corollaries to the Main Result	190
10.3.4	Convolutions and Compound Distributions	192
10.4	The Generalised De Pril Individual Model	194
10.5	The De Pril Approximation	197
10.5.1	General Counting Distribution	197
10.5.2	Counting Distribution in \mathcal{R}_1	199
10.5.3	De Pril's Individual Model	199

10.6	The Kornya Approximation	200
10.6.1	General Counting Distribution	200
10.6.2	Counting Distribution in \mathcal{R}_1	201
10.6.3	De Pril's Individual Model	202
10.7	The Hipp Approximation	204
10.7.1	General Counting Distribution	204
10.7.2	Bernoulli Counting Distribution	205
10.7.3	De Pril's Individual Model	208
10.8	Numerical Example	209
11	Extension to Distributions in \mathcal{P}_{1-}	217
11.1	De Pril Transforms	217
11.1.1	Definition	217
11.1.2	Extension of Results	219
11.2	Error Bounds	220
12	Allowing for Negative Severities	223
12.1	Introduction	223
12.2	Binomial Counting Distribution	224
12.3	Poisson Counting Distribution	226
12.4	Negative Binomial Counting Distribution	228
13	Underflow and Overflow	231
13.1	Simple Scaling	231
13.2	Exponential Scaling	231
13.3	Convolutions	233
Part II Multivariate Distributions		
14	Introduction	237
14.1	Aggregate Claims Distributions	237
14.2	Vectors and Matrices	239
14.3	Induction Proofs in a Multivariate Setting	240
14.4	Classes of Distributions and Functions	241
14.5	Convolutions	241
14.6	Compound Distributions	242
14.7	Moments	244
15	Multivariate Compound Distributions of Type 1	245
15.1	Covariances	245
15.2	Counting Distribution in the Panjer Class	246
15.3	Convolutions of a Distribution	251
15.4	Infinite Divisibility	254
15.5	Counting Distribution with Recursion of Higher Order	254
15.6	Multivariate Bernoulli Severity Distribution	256

16	De Pril Transforms	259
16.1	Definitions	259
16.2	The \mathcal{R}_k Classes	260
16.3	Infinite Divisibility	262
16.4	Extension to Functions in $\mathcal{F}_{m\mathbf{0}}$	263
16.5	Vectors of Independent Random Subvectors	263
16.6	Vectors of Linear Combinations of Independent Random Variables	267
16.7	Individual Models	271
17	Moments	275
17.1	Convolutions of a Distribution	275
17.1.1	Moments	275
17.1.2	The Multinormal Distribution	279
17.2	Compound Distributions	281
17.2.1	General Results	281
17.2.2	Compound Panjer Distributions	283
18	Approximations Based on De Pril Transforms	287
18.1	Approximations	287
18.2	Error Bounds	287
19	Multivariate Compound Distributions of Type 2	289
19.1	Main Framework	289
19.2	Recursions of Higher Order	294
19.3	Multivariate Compound Distributions of Type 3	295
20	Compound Mixed Multivariate Poisson Distributions	297
20.1	Multivariate Poisson Distributions	297
20.2	Extension to Mixed Distributions	300
20.3	Gamma Mixing Distribution	301
20.4	Compound Distributions with Univariate Counting Distribution	304
20.4.1	General Recursion	304
20.4.2	Willmot Mixing Distribution	305
20.5	The Univariate Mixed Counting Distribution	308
20.6	Compound Distributions with Multivariate Counting Distribution	311
20.7	The Multivariate Counting Distribution	311
20.7.1	General Design	311
20.7.2	The Special Design	312
20.7.3	The Special Case $\mu = 0$	318
20.8	Special Classes of Mixing Distributions	320
20.8.1	Shifted Pareto distribution	320
20.8.2	Pareto Distribution	321
20.8.3	Truncated Normal Distribution	322
20.8.4	Inverse Gauss Distribution	323
20.8.5	Transformed Gamma Distribution	324

References	327
List of Notation	337
