

Contents

1	Geometries	1
1.1	The Concept of a Geometry	1
1.2	Incidence Systems and Geometries	4
1.3	Homomorphisms	8
1.4	Subgeometries and Truncations	12
1.5	Residues	18
1.6	Connectedness	20
1.7	Permutation Groups	22
1.8	Groups and Geometries	29
1.9	Exercises	38
1.10	Notes	45
2	Diagrams	49
2.1	The Digon Diagram of a Geometry	49
2.2	Some Parameters for Rank Two Geometries	54
2.3	Diagrams for Higher Rank Geometries	63
2.4	Coxeter Diagrams	69
2.5	Shadows	75
2.6	Group Diagrams	81
2.7	A Geometry of Type \tilde{A}_{n-1}	83
2.8	Exercises	90
2.9	Notes	99
3	Chamber Systems	103
3.1	From a Geometry to a Chamber System	103
3.2	Residues	109
3.3	From Chamber Systems to Geometries	111
3.4	Connectedness	114
3.5	The Diagram of a Chamber System	119
3.6	Groups and Chamber Systems	121
3.7	Exercises	127
3.8	Notes	131

4	Thin Geometries	133
4.1	Being Thin	133
4.2	Thin Geometries of Coxeter Type	144
4.3	Groups Generated by Affine Reflections	151
4.4	Linear Reflection Representations	157
4.5	Root Systems	164
4.6	Finiteness Criteria	175
4.7	Finite Coxeter Groups	180
4.8	Regular Polytopes Revisited	185
4.9	Exercises	188
4.10	Notes	197
5	Linear Geometries	201
5.1	The Affine Space of a Vector Space	201
5.2	The Projective Space of a Vector Space	207
5.3	Matroids	214
5.4	Matroids from Geometries	218
5.5	Steiner Systems	223
5.6	Geometries Related to the Golay Code	231
5.7	Exercises	239
5.8	Notes	247
6	Projective and Affine Spaces	253
6.1	Perspectivities	253
6.2	Projective Lines	259
6.3	Classification of Projective Spaces	267
6.4	Classification of Affine Spaces	272
6.5	Apartments	278
6.6	Grassmannian Geometry	282
6.7	Root Filtration Spaces	283
6.8	Exercises	296
6.9	Notes	301
7	Polar Spaces	305
7.1	Duality for Geometries over a Linear Diagram	306
7.2	Duality and Sesquilinear Forms	309
7.3	Absolutes and Reflexive Sesquilinear Forms	318
7.4	Polar Spaces	323
7.5	The Diagram of a Polar Space	329
7.6	From Diagram to Space	333
7.7	Singular Subspaces	336
7.8	Other Shadow Spaces of Polar Geometries	340
7.9	Root Filtration Spaces	346
7.10	Polar Spaces with Thin Lines	356
7.11	Exercises	359
7.12	Notes	366

8	Projective Embeddings of Polar Spaces	369
8.1	Geometric Hyperplanes and Ample Connectedness	370
8.2	The Veldkamp Space	374
8.3	Projective Embedding for Rank at Least Four	378
8.4	Projective Embedding for Rank Three	386
8.5	Automorphisms of Polar Spaces	399
8.6	Exercises	405
8.7	Notes	408
9	Embedding Polar Spaces in Absolutes	411
9.1	Embedded Spaces	412
9.2	Collars and Tangent Hyperplanes	416
9.3	A Quasi-polarity	423
9.4	Technical Results on Division Rings	428
9.5	Embedding in 3-Dimensional Space	431
9.6	Exercises	442
9.7	Notes	444
10	Classical Polar Spaces	447
10.1	Trace Valued Forms	448
10.2	Pseudo-quadrics	454
10.3	Perspective Sets	462
10.4	Apartments	468
10.5	Automorphisms	475
10.6	Finite Classical Polar Spaces	479
10.7	Exercises	489
10.8	Notes	496
11	Buildings	499
11.1	Building Axioms	500
11.2	Properties of Buildings	509
11.3	Tits Systems	514
11.4	Shadow Spaces	522
11.5	Parapolar Spaces	533
11.6	Root Shadow Spaces	552
11.7	Recognizing Shadow Spaces of Buildings	554
11.8	Exercises	559
11.9	Notes	565
	References	571
	Index	585

Diagram Geometry

Related to Classical Groups and Buildings

Buekenhout, F.; Cohen, A.M.

2013, XIV, 594 p., Hardcover

ISBN: 978-3-642-34452-7
