<b>Uniformly Regular and Singular Riemannian Manifolds</b> .....	1
Herbert Amann	
1 Introduction .....	1
2 Notations and Definitions .....	14
3 Preliminaries .....	17
4 Uniformly Regular Riemannian Manifolds .....	22
5 Characteristics .....	24
6 Model Cusps and Funnels .....	28
7 Submanifolds of Euclidean Spaces .....	31
8 Singular Ends .....	37
References .....	42
<b>Eigenvalue Estimates on Bakry–Émery Manifolds</b> .....	45
Nelia Charalambous, Zhiqin Lu and Julie Rowlett	
1 Introduction .....	45
2 Eigenvalue Estimates .....	46
2.1 One-dimensional Collapse .....	46
2.2 Maximum Principle and Gradient Estimates .....	47
2.3 Lower Bounds for the First Eigenvalue .....	48
2.4 Lower Bounds of Higher Eigenvalues .....	50
2.5 Upper Bounds .....	50
3 Sobolev Inequalities .....	52
4 Heat Kernel Estimates and the Noncompact Case .....	55
4.1 The Essential Spectrum .....	56
4.2 Proof of Theorem 6 .....	57
References .....	59
<b>A Note on the Local Well-Posedness for the Whitham Equation</b> .....	63
Mats Ehrnström, Joachim Escher and Long Pei	
1 Introduction .....	63
2 General Preliminaries and the Case of Initial Data on $\mathbb{R}$ .....	64
3 The Periodic Case .....	73
References .....	74

## **On the Lifetime of a Conditioned Brownian Motion in Domains Connected Through Small Gaps . . . . .**

77

Matthias Erven and Guido Sweers

1	Introduction . . . . .	77
2	The Link Between Brownian Motion and Kernel Functions . . . . .	80
3	Main Results . . . . .	83
4	Estimates on Green Functions and Poisson Kernels . . . . .	84
	4.1 Recalling and Adjusting Known Estimates . . . . .	85
	4.2 Estimates for Higher-Order Green Function Derivatives . . . . .	87
	4.3 Asymptotic Estimates for $G_{\Omega_\ell}$ . . . . .	88
5	The Case that Both $x$ and $y$ Lie in $A$ . . . . .	91
6	The Main Proof: $x$ Lies in $A$ and $y$ in $B$ . . . . .	92
	6.1 The Halfway Statement . . . . .	92
	6.2 Comparing $G_{\Omega_\ell}$ by Poisson Kernels . . . . .	95
	6.3 3G Asymptotics . . . . .	101
7	Appendix: Sub- and Supersolution for a Special Dirichlet Problem . . . . .	106
	References . . . . .	108

## **Analyticity of Rotational Water Waves . . . . .**

111

Joachim Escher and Bogdan-Vasile Matioc

1	Introduction . . . . .	111
2	Two-Dimensional Periodic Flows on Water of Finite Depth . . . . .	112
	2.1 The Governing Equations and Equivalent Formulations . . . . .	112
	2.2 Weak Interpretations of the Height Function Formulation . . . . .	118
	2.3 Regularity Results for Periodic Flows on Water of Finite Depth . . . . .	119
	2.4 Regularity of Periodic Waves with Stagnation Points . . . . .	122
3	Solitary Waves on Water of Finite Depth . . . . .	123
	3.1 Regularity of Solitary Waves . . . . .	123
	3.2 An Intrinsic Characterization of the Symmetric Solitary Waves . . . . .	125
4	Deep-water Waves . . . . .	133
5	Periodic Stratified Flows in Water of Finite Depth . . . . .	134
	References . . . . .	135

## **Degenerate and Singular Porous Medium Type Equations with Measure Data . . . . .**

139

Ugo Gianazza

1	Introduction . . . . .	139
2	A Priori Estimates for Weak Solutions: The Degenerate Case . . . . .	142
3	A Priori Estimates for Weak Solutions: The Singular Case . . . . .	145
4	Existence of Very Weak Solutions when $m > 1$ . . . . .	148
5	Existence of Very Weak Solutions when $\frac{(N-2)_+}{N} < m < 1$ . . . . .	152
	References . . . . .	156

**Aspects of the Mathematical Analysis of Nonlinear Stratified Water Waves** 159

David Henry and Bogdan-Vasile Matioc

1	Introduction	159
1.1	The Mathematical Model	160
2	Existence Results for Flows Admitting Stagnation Points	163
2.1	Stratified Flows with Linear Density Distribution and Constant Bernoulli Function	164
2.2	Stratified Flows with More General Density Distribution and Bernoulli Function	167
3	Existence Results for Flows Without Critical Points	169
3.1	Gravity Stratified Waves	169
3.2	Capillary-Gravity Stratified Waves	171
4	Stratification for Gerstner-Type Flows	172
5	Qualitative Properties for General Stratified Flows	173
	References	175

**A Calculus of Abstract Edge Pseudodifferential Operators of Type  $\rho, \delta$**  179

Thomas Krainer

1	Introduction	179
2	Abstract Wedge Sobolev Spaces	180
3	Abstract Edge Pseudodifferential Operators	186
4	Boundedness and Compactness	197
5	Trace Class Operators	201
6	Appendix: Banach Operator Ideals in Hilbert Spaces	205
	References	207

**Boundary Value Problems for Elliptic Wedge Operators: The First-Order Case** 209

Thomas Krainer and Gerardo A. Mendoza

1	Introduction	209
2	Setup	210
3	Some Considerations	211
4	Ellipticity, the Wedge Cotangent Bundle and the Structure Ring	212
5	Indicial and Normal Families	213
6	The Kernel Bundle of a Holomorphic Fredholm Family	215
7	Elliptic Systems of Variable Order	222
8	Boundary Value Problems for First-Order Elliptic Wedge Operators	228
	References	231

**The Time Singular Limit for a Fourth-Order Damped Wave Equation for MEMS** 233

Philippe Laurençot and Christoph Walker

1	Introduction	233
1.1	State of the Art	235
1.2	The Time Singular Limit	239

2	A Lower Bound on the Maximal Existence Time . . . . .	240
3	The Time Singular Limit $\gamma^2 \rightarrow 0$ . . . . .	244
	References . . . . .	245
	<b>Compositions in the Edge Calculus . . . . .</b>	<b>247</b>
	B.-Wolfgang Schulze	
1	Introduction . . . . .	247
2	Edge Quantisation . . . . .	248
	2.1 Mellin Operators and the Cone Algebra . . . . .	248
	2.2 Smoothing Mellin Plus Green Edge Symbols . . . . .	252
	2.3 Edge-Degenerate Operators and Mellin-Edge Quantisation . . . . .	255
3	Composition Results . . . . .	256
	3.1 Properties of Edge Symbols . . . . .	256
	3.2 Compositions . . . . .	260
	3.3 Conclusions and Remarks . . . . .	263
4	Auxiliary Material . . . . .	264
	4.1 Kegel Spaces and Other Aspects of the Cone Calculus . . . . .	264
	4.2 Edge Spaces and Symbols with Twisted Symbolic Estimates . . . . .	267
	4.3 Asymptotics . . . . .	269
	References . . . . .	270
	<b>On Bifurcation for Semilinear Elliptic Dirichlet Problems on Shrinking Domains . . . . .</b>	<b>273</b>
	Nils Waterstraat	
1	Introduction . . . . .	273
2	Bifurcation of Critical Points for Essentially Positive Functionals . . . . .	276
	2.1 Self-Adjoint Fredholm Operators and Their Spectra . . . . .	277
	2.2 The Bifurcation Theorem . . . . .	279
3	Elliptic Dirichlet Problems on Shrinking Domains . . . . .	283
4	Corollaries and Examples . . . . .	288
	References . . . . .	290

Elliptic and Parabolic Equations

Hannover, September 2013

Escher, J.; Schrohe, E.; Seiler, J.; Walker, C. (Eds.)

2015, XII, 291 p. 13 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-12546-6
