## Part I Basics of Fault Diagnosis

<b>1</b>	<b>Introduction</b> . . . . .	3
1.1	Linear Synthesis Techniques for Fault Diagnosis . . . . .	3
1.2	Outline of the Book . . . . .	5
1.3	Notes and References . . . . .	6
<b>2</b>	<b>Modelling Systems with Faults</b> . . . . .	7
2.1	Types of Faults . . . . .	8
2.2	Plant Models with Additive Faults . . . . .	9
2.2.1	Models with Parametric Uncertainties . . . . .	12
2.2.2	Models with Parametric Faults . . . . .	16
2.2.3	Multiple Linear Models . . . . .	19
2.3	Physical Fault Models . . . . .	22
2.4	Notes and References . . . . .	24
<b>3</b>	<b>Fault Diagnosis</b> . . . . .	27
3.1	Basic Fault Monitoring Tasks . . . . .	27
3.2	Residual Generation . . . . .	30
3.3	Fault Detectability . . . . .	31
3.4	Fault Isolability . . . . .	38
3.5	Fault Detection and Isolation Problems . . . . .	43
3.5.1	Exact Fault Detection Problem . . . . .	44
3.5.2	Approximate Fault Detection Problem . . . . .	45
3.5.3	Exact Fault Detection and Isolation Problem . . . . .	46
3.5.4	Approximate Fault Detection and Isolation Problem . . . . .	47
3.5.5	Exact Model-Matching Problem . . . . .	49
3.5.6	Approximate Model-Matching Problem . . . . .	51
3.6	Threshold Selection . . . . .	51
3.7	Notes and References . . . . .	55

<b>4</b>	<b>Model Detection</b>	57
4.1	Basic Model Detection Task	57
4.2	Residual Generation	59
4.3	Model Detectability	60
4.4	Model Detection Problems	63
4.4.1	Exact Model Detection Problem	63
4.4.2	Approximate Model Detection Problem	64
4.5	Threshold Selection	64
4.6	Notes and References	66
 <b>Part II Synthesis of Residual Generators</b>		
<b>5</b>	<b>Synthesis of Fault Detection and Isolation Filters</b>	71
5.1	Nullspace-Based Synthesis	72
5.2	Solving the Exact Fault Detection Problem	76
5.3	Solving the Approximate Fault Detection Problem	82
5.4	Solving the Exact Fault Detection and Isolation Problem	93
5.5	Solving the Approximate Fault Detection and Isolation Problem	101
5.6	Solving the Exact Model-Matching Problem	107
5.7	Solving the Approximate Model-Matching Problem	113
5.8	Notes and References	122
<b>6</b>	<b>Synthesis of Model Detection Filters</b>	127
6.1	Nullspace-Based Synthesis	127
6.2	Solving the Exact Model Detection Problem	129
6.3	Solving the Approximate Model Detection Problem	136
6.4	Notes and References	145
<b>7</b>	<b>Computational Issues</b>	147
7.1	Developing Satisfactory Numerical Algorithms	148
7.2	Modelling Issues	150
7.2.1	System Representations	151
7.2.2	Model Conditioning	154
7.3	Basic Procedural Framework	159
7.4	Nullspace-Based Reduction	162
7.5	Least-Order Synthesis	171
7.6	Coprime Factorization Techniques	179
7.7	Outer-Inner Factorizations	182
7.8	Spectral Factorizations	187
7.9	Linear Rational Equations	189
7.10	Solution of Least Distance Problems	191
7.11	Notes and References	197

<b>8</b>	<b>Case Studies</b>	201
8.1	Monitoring Flight Actuator Faults	202
8.1.1	Nominal Synthesis	203
8.1.2	Robust Synthesis Using Local Measurements	212
8.1.3	Local Monitoring of Actuator Faults—Industrial Aspects	216
8.1.4	Linearized State-Space Models with Additive Actuator Faults	221
8.2	Monitoring Air Data Sensor Faults	226
8.2.1	Robust LTI FDI Filter Synthesis	227
8.2.2	Robust LPV FDI Filter Synthesis	236
8.2.3	Monitoring Air Data Sensor Faults—Industrial Aspects	242
8.2.4	Linearized State-Space Models with Additive Sensor Faults	243
8.3	Notes and References	245

### Part III Background Material

<b>9</b>	<b>System Theoretical Concepts</b>	249
9.1	Rational Transfer Function Matrices	249
9.1.1	Transfer Functions	250
9.1.2	Transfer Function Matrices	251
9.1.3	Linear Dependence, Normal Rank, Minimal Basis	252
9.1.4	Poles and Zeros	255
9.1.5	Additive Decompositions	258
9.1.6	Fractional Factorizations	259
9.1.7	Norms	262
9.1.8	Inner–Outer and Spectral Factorizations	263
9.1.9	Linear Rational Matrix Equations	265
9.1.10	Approximate Model-Matching	266
9.2	Descriptor Systems	269
9.2.1	Descriptor Realizations of Rational Matrices	270
9.2.2	Poles, Zeros and Minimal Indices	271
9.2.3	Operations with Rational Matrices	277
9.2.4	Minimal Rational Nullspace Bases	280
9.2.5	Additive Decompositions	283
9.2.6	Coprime Factorizations	283
9.2.7	Norms	287
9.2.8	Inner–Outer and Spectral Factorizations	289
9.2.9	Linear Rational Equations	292
9.3	Notes and References	297

<b>10</b>	<b>Computational Algorithms and Software</b>	299
10.1	Matrix Decompositions and Condensed Forms	299
10.1.1	Singular Value Decomposition	300
10.1.2	QR Decomposition	302
10.1.3	Real Schur Decomposition	305
10.1.4	Generalized Real Schur Decomposition	307
10.1.5	Controllability and Observability Staircase Forms	311
10.1.6	Kronecker-Like Forms	315
10.2	Solution of Matrix Equations	321
10.2.1	Linear Matrix Equations	321
10.2.2	Generalized Algebraic Riccati Equations	323
10.3	Algorithms for Descriptor Systems	325
10.3.1	Minimal Realization	325
10.3.2	Minimal Proper Rational Nullspace Bases	329
10.3.3	Poles and Zeros Computation	337
10.3.4	Additive Decompositions	337
10.3.5	Coprime Factorizations	339
10.3.6	Inner–Outer Factorization	346
10.3.7	Linear Rational Matrix Equations	351
10.4	Special Algorithms	357
10.4.1	Special Controllability Staircase Form Algorithm	357
10.4.2	Order Reduction Using Minimum Dynamic Covers of Type I	360
10.4.3	Order Reduction Using Minimum Dynamic Covers of Type II	366
10.4.4	Minimal Realization Using Balancing Techniques	371
10.4.5	Solution of Nehari Problems	372
10.5	Numerical Software	374
10.6	Notes and References	377
	<b>References</b>	381
	<b>Index</b>	389

Solving Fault Diagnosis Problems

Linear Synthesis Techniques

Varga, A.

2017, XXVIII, 394 p. 18 illus., Hardcover

ISBN: 978-3-319-51558-8
