Contents

1 Introduction 1
1.1 Concepts 3
1.1.1 Classification of Commonly Used Small Aircraft 3
1.1.2 Unmanned Aerial Vehicle and Model Aircraft 5
1.2 Remote Control and Performance Evaluation 6
1.2.1 Remote Control of a Multicopter 6
1.2.2 Performance Evaluation 10
1.2.3 Bottleneck 12
1.3 History of Multicopters 13
1.3.1 The First Stage (Before 1990): Dormancy Period 14
1.3.2 The Second Stage (1990–2005): Growing Period 15
1.3.3 The Third Stage (2005–2010): Development Period 15
1.3.4 The Fourth Stage (2010–2013): Activity Period 17
1.3.5 The Fifth Period (2013–): Booming Period 19
1.3.6 Conclusion Remark 21
1.4 The Objective and Structure of the Book 21
1.4.1 Objective 21
1.4.2 Structure 22
Exercises 25
References 25

Part I Design

2 Basic Composition 31
2.1 Introduction 33
2.2 Airframe 33
2.2.1 Fuselage 33
2.2.2 Landing Gear 36
2.2.3 Duct 36
2.3 Propulsion System 37
2.3.1 Propeller 37
2.3.2 Motor 40

2.3.3 Electronic Speed Controller 43
2.3.4 Battery 45
2.4 Command and Control System 47
2.4.1 RC Transmitter and Receiver 47
2.4.2 Autopilot 50
2.4.3 Ground Control Station 51
2.4.4 Radio Telemetry 51
2.5 Summary 54
Exercises 54
References 54

3 Airframe Design 57
3.1 Configuration Design 59
3.1.1 Airframe Configuration 59
3.1.2 Aerodynamic Configuration 66
3.2 Structural Design 67
3.2.1 Design Principles of Airframe 67
3.2.2 Anti-Vibration Consideration 67
3.2.3 Noise Reduction Consideration 70
3.3 Summary 71
Exercises 71
References 71

4 Modeling and Evaluation of Propulsion System 73
4.1 Problem Formulation 75
4.2 Propulsion System Modeling 75
4.2.1 Propeller Modeling 75
4.2.2 Motor Modeling 77
4.2.3 Electronic Speed Controller Modeling 79
4.2.4 Battery Modeling 80
4.3 Performance Evaluation 80
4.3.1 Solution to Problem 1 80
4.3.2 Solution to Problem 2 83
4.3.3 Solution to Problem 3 83
4.3.4 Solution to Problem 4 84
4.4 Test Case 87
4.5 Summary 88
4.6 Appendix 89
4.6.1 Procedure to Obtain Thrust Coefficient and Torque Coefficient 89
4.6.2 Procedure to Obtain the Motor Equivalent Voltage and Current 91
Exercises 94
References 95

Part II Modeling

5 Coordinate System and Attitude Representation 99
5.1 Coordinate Frame 101
5.1.1 Right-Hand Rule 101

5.1.2 Earth-Fixed Coordinate Frame and Aircraft-Body Coordinate Frame 101
5.2 Attitude Representation 102
5.2.1 Euler Angles 102
5.2.2 Rotation Matrix 105
5.2.3 Quaternions 109
5.3 Summary 119
Exercises 119
References 120

6 Dynamic Model and Parameter Measurement 121
6.1 Multicopter Control Model 123
6.1.1 General Description 123
6.1.2 Multicopter Flight Control Rigid Model 124
6.1.3 Control Effectiveness Model 127
6.1.4 Propulsor Model 129
6.2 Multicopter Aerodynamic Drag Model 130
6.2.1 Blade Flapping 130
6.2.2 Multicopter Aerodynamic Drag Model 132
6.3 Multicopter Model Parameter Measurement 132
6.3.1 Position of the Center of Gravity 133
6.3.2 Weight 134
6.3.3 Moment of Inertia 134
6.3.4 Propulsor Model's Parameter Measurement 138
6.4 Summary 143
Exercises 143
References 143

Part III Perception

7 Sensor Calibration and Measurement Model 147
7.1 Three-Axis Accelerometer 149
7.1.1 Fundamental Principle 149
7.1.2 Calibration 149
7.1.3 Measurement Model 151
7.2 Three-Axis Gyroscope 151
7.2.1 Fundamental Principle 151
7.2.2 Calibration 152
7.2.3 Measurement Model 154
7.3 Three-Axis Magnetometer 155
7.3.1 Fundamental Principle 155
7.3.2 Calibration 155
7.3.3 Measurement Model 157
7.4 Ultrasonic Range Finder 157
7.4.1 Fundamental Principle 157
7.4.2 Calibration 158
7.4.3 Measurement Model 158
7.5 Barometer 158
7.5.1 Fundamental Principle 158
7.5.2 Calibration 159
7.5.3 Measurement Model 159

7.6 2D Laser Range Finder 159
7.6.1 Fundamental Principle 159
7.6.2 Calibration 159
7.6.3 Measurement Model 159
7.6.4 Supplement: LiDAR 160
7.7 Global Positioning System 162
7.7.1 Fundamental Principle 162
7.7.2 Calibration 163
7.7.3 Measurement Model 163
7.7.4 Supplement: Latitude-and-Longitude Distance and Heading Calculation 164
7.8 Camera 165
7.8.1 Fundamental Principle 165
7.8.2 Measurement Model 166
7.8.3 Calibration 168
7.8.4 Some Toolboxes 170
7.9 Summary 170
Exercises 171
References 172

8 Observability and Kalman Filter 173
8.1 Observability 175
8.1.1 Linear System 175
8.1.2 Continuous-Time Nonlinear System 179
8.2 Kalman Filter 183
8.2.1 Objective 184
8.2.2 Preliminary 184
8.2.3 Theoretical Derivation 185
8.2.4 Multirate Kalman Filter 192
8.3 Extended Kalman Filter 193
8.3.1 Basic Principle 193
8.3.2 Theoretical Derivation 193
8.3.3 Implicit Extended Kalman Filter 195
8.4 Summary 196
Exercises 196
References 196

9 State Estimation 199
9.1 Attitude Estimation 201
9.1.1 Measuring Principle 201
9.1.2 Linear Complementary Filter 204
9.1.3 Nonlinear Complementary Filter 207
9.1.4 Kalman Filter 208
9.2 Position Estimation 209
9.2.1 GPS-Based Position Estimation 209
9.2.2 SLAM-Based Position Estimation 210
9.3 Velocity Estimation 214
9.3.1 Optical-Flow-Based Velocity Estimation Method 214

9.3.2 Aerodynamic-Drag-Model-Based Velocity Estimation Method 218
9.4 Obstacle Estimation 220
9.4.1 Focus of Expansion Calculation 220
9.4.2 Time to Collision Calculation. 221
9.5 Summary. 222
Exercises 223
References 224

Part IV Control

10 Stability and Controllability 227
10.1 Definition of Stability 229
10.2 Stability Criteria 230
10.2.1 Stability of Multicopters 230
10.2.2 Some Results of Stability 231
10.3 Basic Concepts of Controllability 236
10.3.1 Classical Controllability. 236
10.3.2 Positive Controllability 237
10.4 Controllability of Multicopters 238
10.4.1 Multicopter System Modeling 238
10.4.2 Classical Controllability. 240
10.4.3 Positive Controllability 240
10.4.4 Controllability of Multicopter Systems 243
10.4.5 Further Discussions. 247
10.5 Summary. 247
10.6 Appendix: Proof of Lemma 10.17. 248
Exercises 249
References 250

11 Low-Level Flight Control 251
11.1 Framework of Low-Level Flight Control of Multicopters. 253
11.2 Linear Model Simplification. 254
11.2.1 Horizontal Position Channel Model. 255
11.2.2 Altitude Channel Model 255
11.2.3 Attitude Model. 256
11.3 Position Control 256
11.3.1 Basic Concept 256
11.3.2 Euler Angles as Output 257
11.3.3 Rotation Matrix as Output 262
11.4 Attitude Control 265
11.4.1 Basic Conception 265
11.4.2 Euler Angles Based Attitude Control. 266
11.4.3 Rotation Matrix Based Attitude Control. 266
11.4.4 Robust Attitude Control 267
11.5 Control Allocation 274
11.5.1 Basic Concept 274
11.5.2 Implementation of Control Allocation in Autopilots 275

11.6 Motor Control 277
11.6.1 Closed-Loop Control. 277
11.6.2 Open-Loop Control. 277
11.7 Comprehensive Simulation. 277
11.7.1 Control Objective and System Parameter Setting 277
11.7.2 Euler Angles Based Attitude Control Combined with Euler Angles Based Position Control 278
11.7.3 Rotation Matrix Based Attitude Control Combined with Rotation Matrix Based Position Control 280
11.7.4 Robust Attitude Control 282
11.8 Summary. 283
Exercises 284
References 285

12 Position Control Based on Semi-Autonomous Autopilots . . . 287
12.1 Problem Formulation. 289
12.1.1 Structure of Multicopter with SAA 289
12.1.2 Models of Three Channels. 289
12.1.3 Objective of Position Control. 291
12.2 System Identification. 291
12.2.1 Procedure and Toolboxes of System Identification 291
12.2.2 Model Used in System Identification. 293
12.3 Position Controller Design. 296
12.3.1 PID Controller 297
12.3.2 Additive-Output-Decomposition-Based Dynamic Inversion Control 297
12.4 Simulation. 300
12.4.1 System Identification. 300
12.4.2 Control Design. 304
12.4.3 Comparison of Tracking Performance 305
12.5 Summary. 307
Exercises 308
References 308

Part V Decision

13 Mission Decision-Making 313
13.1 Fully-Autonomous Control 315
13.1.1 Brief Introduction. 315
13.1.2 Mission Planning 316
13.1.3 Path Planning. 318
13.2 Semi-Autonomous Control. 328
13.2.1 Three Modes of SAC 329
13.2.2 Radio Control 330
13.2.3 Automatic Control 331
13.2.4 Switching Logic Between RC and AC 333

13.3 Summary . . . 335
Exercises . . . 335
References . . . 336

14 Health Evaluation and Failsafe . . . 337
14.1 Purpose and Significance of Decision-Making Mechanism . . . 339
14.2 Safety Issues . . . 339
14.2.1 Communication Breakdown . . . 339
14.2.2 Sensor Failure . . . 340
14.2.3 Propulsion System Anomaly . . . 341
14.3 Health Evaluation . . . 341
14.3.1 Pre-Flight Health Check . . . 341
14.3.2 In-Flight Health Evaluation . . . 342
14.4 Failsafe Suggestions . . . 345
14.4.1 Communication Failsafe . . . 346
14.4.2 Sensor Failsafe . . . 346
14.4.3 Propulsion System Failsafe . . . 346
14.5 A Safe Semi-Autonomous Autopilot Logic Design . . . 347
14.5.1 Requirement Description . . . 347
14.5.2 Multicopter State and Flight Mode Definition . . . 348
14.5.3 Event Definition . . . 348
14.5.4 Autopilot Logic Design . . . 350
14.5.5 Demand and Decision-Making Table . . . 354
14.6 Summary . . . 359
Exercises . . . 360
References . . . 361

15 Outlook . . . 363
15.1 Related Technology Development . . . 365
15.1.1 Propulsion Technology . . . 365
15.1.2 Navigation Technology . . . 366
15.1.3 Interactive Technology . . . 367
15.1.4 Communication Technology . . . 368
15.1.5 Chip Technology . . . 368
15.1.6 Software Platform Technology . . . 369
15.1.7 Air Traffic Control Technology . . . 369
15.1.8 Concluding Remark . . . 370
15.2 Demand and Technology Innovation . . . 370
15.2.1 Innovation Level . . . 370
15.2.2 Application Innovation . . . 370
15.2.3 Performance Innovation . . . 372
15.3 Analysis . . . 375
15.3.1 Risks . . . 375
15.3.2 Suggestions . . . 375
15.4 Opportunities and Challenges . . . 376
15.4.1 Opportunities . . . 376
15.4.2 Challenges . . . 376
References . . . 377
