

Contents

1	Basic Concepts on Anisotropy	1
1.1	Introduction: What is Anisotropy?	1
1.2	Mathematical Consequences of Anisotropy	3
1.2.1	Effects on the Algebraic Operators	3
1.2.2	Geometrical Symmetries	4
1.3	Some Anisotropic Physical Phenomena	6
1.3.1	Paramagnetism and Diamagnetism	7
1.3.2	Dielectric Susceptibility	7
1.3.3	Thermal Conductivity	8
1.3.4	Piezoelectricity	8
1.3.5	Photoelastic and Electro-Optical Effects	9
1.3.6	A General Consideration About Anisotropic Phenomena	10
1.4	Some Basic Elements About Crystals	11
1.4.1	Lattices and Cells	11
1.4.2	The Symmetries of Crystals	13
1.4.3	Classifications of the Crystals	13
1.4.4	The Neumann's Principle	15
1.5	Some Fundamental Equations of the Mechanics of Elastic Bodies	15
	References	17
2	General Anisotropic Elasticity	19
2.1	The Hooke's Law for Anisotropic Bodies	19
2.1.1	The Voigt's Notation	22
2.1.2	The Kelvin's Notation	24
2.1.3	The Mechanical Meaning of the Anisotropic Elastic Constants	25

2.2	Elastic Symmetries	27
2.2.1	Taking into Account for Elastic Symmetries	27
2.2.2	Rotation of Axes	28
2.2.3	A Tensorial Characterization of Elastic Symmetries	31
2.2.4	Triclinic Bodies	31
2.2.5	Monoclinic Bodies	32
2.2.6	Orthotropic Bodies	33
2.2.7	Axially Symmetric Bodies	34
2.2.8	Transversely Isotropic Bodies	36
2.2.9	Isotropic Bodies	37
2.2.10	Some Remarks About Elastic Symmetries	39
2.2.11	Elasticity of Crystals and Elastic Syngonies	39
2.3	The Technical Constants of Elasticity	41
2.3.1	The Young's Moduli	42
2.3.2	Shear Moduli	42
2.3.3	Poisson's Coefficients	43
2.3.4	Chentsov's Coefficients	44
2.3.5	Coefficients of Mutual Influence of the First Type	44
2.3.6	Coefficients of Mutual Influence of the Second Type	45
2.3.7	Some Remarks About the Technical Constants	46
2.4	Bounds on the Elastic Constants.	48
2.4.1	General Conditions and Results.	48
2.4.2	Mathematical Conditions for the Elastic Matrices.	48
2.4.3	A Mechanical Approach	51
2.4.4	Bounds on the Technical Constants.	52
2.5	An Observation About the Decomposition of the Strain Energy	54
2.6	Determination of Symmetry Planes.	56
2.6.1	Physical Interpretations	58
2.7	Curvilinear Anisotropy	59
2.8	Some Examples of Anisotropic Materials	61
	References.	73
3	Plane Anisotropic Elasticity	75
3.1	Introduction	75
3.2	Stress Functions	76
3.3	Simplifying the General Relations	80
3.3.1	Rotation of Axes	80
3.3.2	The Tsai and Pagano Parameters	81
3.3.3	Plane and Antiplane States and Tensors	82

3.4	Plane Strain	84
3.4.1	The Concept of Plane Strain in the Literature	86
3.5	Plane Stress	88
3.5.1	The Concept of Plane Stress in the Literature	90
3.6	Generalized Plane Stress.	91
3.7	Mechanical Consistency of Plane States.	93
3.8	Comparison of Plane States	95
3.9	The Lekhnitskii Theory	97
3.9.1	The General Lekhnitskii Problem	97
3.9.2	The Decomposition of the Displacement Field	98
3.9.3	Strain Field and Compatibility Equations	100
3.9.4	Differential Equations for χ and Ψ	101
3.9.5	General Solution of the Homogeneous Equations.	104
3.9.6	Roots of the Characteristic Equation	106
3.9.7	General Expressions for Stresses and Displacements.	109
3.9.8	Boundary Conditions.	111
3.9.9	Generalized Plane Strain	112
3.9.10	Plane Deformation.	113
3.9.11	Generalized Plane Stress	116
3.9.12	A Final Consideration	116
3.10	The Stroh Theory	117
3.10.1	The General Stroh Problem.	117
3.10.2	The Theory of Eshelby, Read and Shockley	118
3.10.3	The Eigenvalues p_j and the Elastic Syngony.	121
3.10.4	The Sextic Formalism of Stroh	122
3.10.5	Algebraic Questions	125
3.11	Plane States: Nomenclature.	128
	References.	129
4	The Polar Formalism	131
4.1	Introduction: Why the Polar Formalism?	131
4.2	The Transformation of Verchery.	133
4.3	Tensor Rotation	137
4.4	Tensor Invariants Under Frame Rotations.	140
4.5	The Polar Components	143
4.5.1	Second-Rank Symmetric Tensors	143
4.5.2	Elasticity Tensors	144
4.6	Change of Frame	146
4.7	Harmonic Interpretation of the Polar Formalism.	148
4.8	Polar Parameters of the Inverse Tensor.	149
4.9	Technical Constants and Polar Invariants	150

4.10	Polar Decomposition of the Strain Energy	152
4.11	Bounds on the Polar Invariants.	154
4.12	Symmetries.	156
4.12.1	Ordinary Orthotropy	160
4.12.2	R_0 -Orthotropy	166
4.12.3	r_0 -Orthotropy.	171
4.12.4	Square Symmetry	173
4.12.5	Isotropy	175
4.12.6	Final Considerations About Elastic Symmetries in \mathbb{R}^2	175
4.13	The Polar Formulae with the Kelvin's Notation	176
4.14	Comparison with the Tsai and Pagano Parameters	177
4.15	Special Plane Elastic Anisotropic Materials	179
4.15.1	Rari-Constant Materials.	180
4.15.2	Complex Materials	192
4.16	Special Topics of the Polar Formalism	194
4.16.1	Polar Projectors.	194
4.16.2	Interaction of Geometry and Anisotropy	201
4.16.3	Wrinkling of Anisotropic Membranes	208
4.17	Applications of the Polar Formalism to Other Fields	220
4.17.1	Plane Piezoelectricity.	220
4.17.2	Anisotropic Damage of Isotropic Layers	222
4.17.3	Tensor Strength Criteria for Anisotropic Layers	229
4.18	Some Examples of Planar Anisotropic Materials	233
	References.	242
5	Anisotropic Laminates	245
5.1	Introduction	245
5.2	Fundamentals of the Classical Laminated Plates Theory.	246
5.2.1	The Assumptions of the Classical Model	246
5.2.2	The Kinematical Consequences of the Kirchhoff Hypotheses	246
5.2.3	The Strain and Stress Tensors	247
5.2.4	Internal Actions.	250
5.2.5	The Laminates' Fundamental Law.	251
5.2.6	Bending-Extension Coupling.	252
5.2.7	Heterogeneity of the Elastic Behavior	253
5.2.8	Quasi-homogeneous Laminates	253
5.2.9	Inverting the Fundamental Law of Laminates	254
5.2.10	Laminates Made of Identical Plies.	256
5.2.11	Laminates by the Polar Formalism	257

5.2.12	The Case of Identical Layers: The Lamination Parameters	259
5.2.13	Geometrical Bounds	261
5.3	Laminates with Special General Properties	266
5.3.1	Bending-Extension Uncoupling	266
5.3.2	Quasi-homogeneity	268
5.3.3	Quasi-trivial Solutions	268
5.3.4	Orthotropy	271
5.3.5	Isotropy	280
5.3.6	Sensitivity to Orientation Errors	285
5.4	Thermal and Hygral Properties	293
5.4.1	The Fundamental Law of Laminates in Thermo-Elasticity	294
5.4.2	The Inverse Fundamental Law of Laminates in Thermo-Elasticity	295
5.4.3	The Polar Formalism for the Thermo-Elastic Tensors	296
5.4.4	Thermally Uncoupled Laminates	297
5.4.5	Thermally Quasi-homogeneous Laminates	298
5.5	Higher-Order Laminate Theories and the Polar Formalism	299
5.5.1	The First-Order Shear Deformation Theory of Laminated Plates	300
5.5.2	The Third-Order Shear Deformation Theory of Laminated Plates	303
	References	306
6	Design Problems and Methods of Anisotropic Structures	309
6.1	Introduction	309
6.2	A Basic Problem: The Optimal Orientation of Anisotropy	311
6.2.1	A Short Account of the State of the Art	311
6.2.2	A Polar Approach to the Maximization of the Stiffness	313
6.2.3	A Polar Approach to the Maximization of the Strength	323
6.3	Design Problems of Anisotropic Structures	326
6.3.1	Different Types of Design Problems	326
6.3.2	Influence of Anisotropy on Optimal Solutions	327
6.4	Design Problems of the First Type	332
6.4.1	Unified Polar Formulation of the Optimum Problem	333
6.4.2	Identical Layers Laminates: The Lamination Set, Non Uniqueness of the Stacking Sequence	335
6.4.3	Numerical Approaches	339

6.5	Design Problems of the Second Type	347
6.5.1	Methods for Handling Constraints	347
6.5.2	Some Examples of Design Problems of the Second Type	351
6.6	Design Problems of the Third Type	356
6.6.1	A Problem Naturally Sequential: The Two-Step Approach	356
6.6.2	Step 1: Structural Anisotropy Optimization Problem	357
6.6.3	Step 2: Constitutive Law Problem	358
6.6.4	Final Commentaries on the Two-Step Approach	359
6.6.5	Some Examples of Design Problems of the Third Type	360
6.7	Optimization of Anisotropy Fields	369
6.7.1	The Case of Variable Stiffness and Strength	370
6.8	Optimization of Modular Systems	380
6.8.1	The Code BIANCA	380
6.8.2	Designing Laminates with Minimal Number of Layers	383
6.8.3	An Application: The Design of an Aircraft Wing Box-Girder	387
6.9	Some Multiphysics Problems of Anisotropic Laminates Design	400
6.9.1	Tailoring the Thermo-Elastic Properties of an Anisotropic Laminate	400
6.9.2	Thermally Stable Laminates	403
6.9.3	Tailoring the Piezo-Electric Properties	415
