It allows users to generate, view, and present AutoCAD-based models online, and interact with the model via a browser. Subscribers can use their own CAD drawings or obtain the most up-to-date set of drawings by automatic import from the CAD server. In late 2007, Autodesk acquired Geomatica, an international leader in the creation and management of GIS-based spatial data, and made the application part of AutoCAD 360 Architecture. Autodesk also released the following mobile apps: AutoCAD 360 Mobile

Open Autocad, navigate to: Start \ Options \ Advanced and check the box next to "Generate Key". A button will appear in the top right hand corner of the screen. If you click the button the key will be copied to your clipboard. Once you paste it into your software it will prompt you to press ok or cancel. Press Ok. You can now edit your settings with the new Key. One of my most fave celebs, Elsa Pataky, just opened up to US Weekly about her struggle to bond with her sons, Neel and Arya. It seems the three have a very competitive relationship; while Elsa is still very much a 'perfect mom,' while her kids are even younger than what most moms have, she's kind of overwhelmed with parenting. She admits, "Neel and Arya have been fighting like cats and dogs since they were babies. I remember my mom saying, 'Well, she's probably going to be a pain in the ass when she's older,' and now, two years later, that has turned out to be the case. Neel is aggressive and I have to try to be the referee. It's definitely a learning curve." As for Arya, she admits, "He doesn't get along with the rest of the children. He kind of has a thing against the other kids. I think he's jealous because he is only three. I have to try to make it more fun for him. "I'm learning every day how to do the job and having a good time. I'm learning how to balance it," she admits. "It's so hard to teach your child the right values." "It's very difficult. I did the same thing," she added. "And I'm trying to be a perfect mom in the sense of he has to understand I can't be perfect because I have a family. I have to be there for them." I'm always down to hear more about the new movie Mrs. Doubtfire 2 starring Robin Williams and Pierce Brosnan. Do you want to see this come to life? Let us know in the comments below. Import and create markup in new modules for the first time. You can now import, edit, and export markup from new modules. (video: 1:27 min.) Import or add markup to DWF files using DWF files for the first time. You can now easily generate DWF files by using imported import and export markup. (video: 1:23 min.) XML Mashup: XML Mashup is a new modeling interface from Autodesk that will combine multiple types of CAD data within a single modeling environment. (video: 1:50 min.) Data Set: Data Set allows you to add multiple CAD data to a single set. You can add multiple data sets, change data within a set, and rename data within a set. (video: 1:45 min.) AutoCAD 2023 introduces a new plug-in technology called 'Data Sets,' which enable you to use existing CAD data from files such as DWF, DWG, DGN, STL, BMP, JPG, SVG, TIFF, TXT, GCode, and so on. Data sets can be organized into a set or different sets within a set. The set includes a file or files that contain all of the data set's CAD objects. You can drag and drop CAD objects from one data set to another to create or remove objects. You can add or remove data within a set. When you change data within a set, the set changes only, without touching the existing objects. (video: 1:30 min.) You can organize multiple data sets into a set, modify the set, and add and remove CAD data from a data set. You can then drag and drop the modified set onto the model. When you do this, the set changes without affecting the existing CAD objects. (video: 1:43 min.) Once you add data, you can then edit and rearrange the data within the set. You can then add the modified set to the model. When you drag the modified set onto the model, the set changes without affecting existing CAD objects. (video: 1:34 min.) Object Data is an innovative application of the Data Set technology that allows you to create multiple data sets from a single set of CAD objects. You can create a set of CAD objects into one set. You can then edit the objects in the set and use the set to create multiple data sets. You can then
