Cole-Cole model

$$\sigma = \begin{array}{c} \text{bulk water} \\ \frac{1}{F} \sigma_W \end{array} + \begin{array}{c} \text{surface} \\ \text{conduction} \\ \sigma'_{surf} \end{array} + \begin{array}{c} \text{surface} \\ \text{polarization} \\ i\sigma''_{surf} \end{array}$$

Cole-Cole model

$$\sigma = \begin{array}{c} \text{bulk water} \\ \frac{1}{F} \sigma_W \end{array} + \begin{array}{c} \text{surface} \\ \text{conduction} \\ \sigma'_{surf}(\omega) \end{array} + \begin{array}{c} \text{surface} \\ \text{polarization} \\ i\sigma''_{surf}(\omega) \end{array}$$

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^c} \right) \right)$$

Cole-Cole model

$$\sigma = \begin{array}{c} \text{bulk water} \\ \frac{1}{F} \sigma_W \end{array} + \begin{array}{c} \text{surface} \\ \text{conduction} \\ \sigma'_{surf}(\omega) \end{array} + \begin{array}{c} \text{surface} \\ \text{polarization} \\ i\sigma''_{surf}(\omega) \end{array}$$

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right) \quad \text{Cole-Cole model (conductivity form)}$$

Model parameters:

$$\{ \sigma_0, m_0, \tau_\sigma, C \}$$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters $\{ \sigma_0, m_0, \tau_\sigma, C \}$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters $\{ \sigma_0, m_0, \tau_\sigma, C \}$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters $\{ \sigma_0, m_0, \tau_\sigma, C \}$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters: $\{\sigma_0, m_0, \tau_\sigma, C\}$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters: $\{\sigma_0, m_0, \tau_\sigma, C\}$

Cole-Cole model

$$\sigma = \sigma_0 \cdot \left(1 + \frac{m_0}{1 - m_0} \cdot \left(1 - \frac{1}{1 + i\omega\tau_\sigma^C} \right) \right)$$

Model parameters: $\{\sigma_0, m_0, \tau_\sigma, C\}$

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

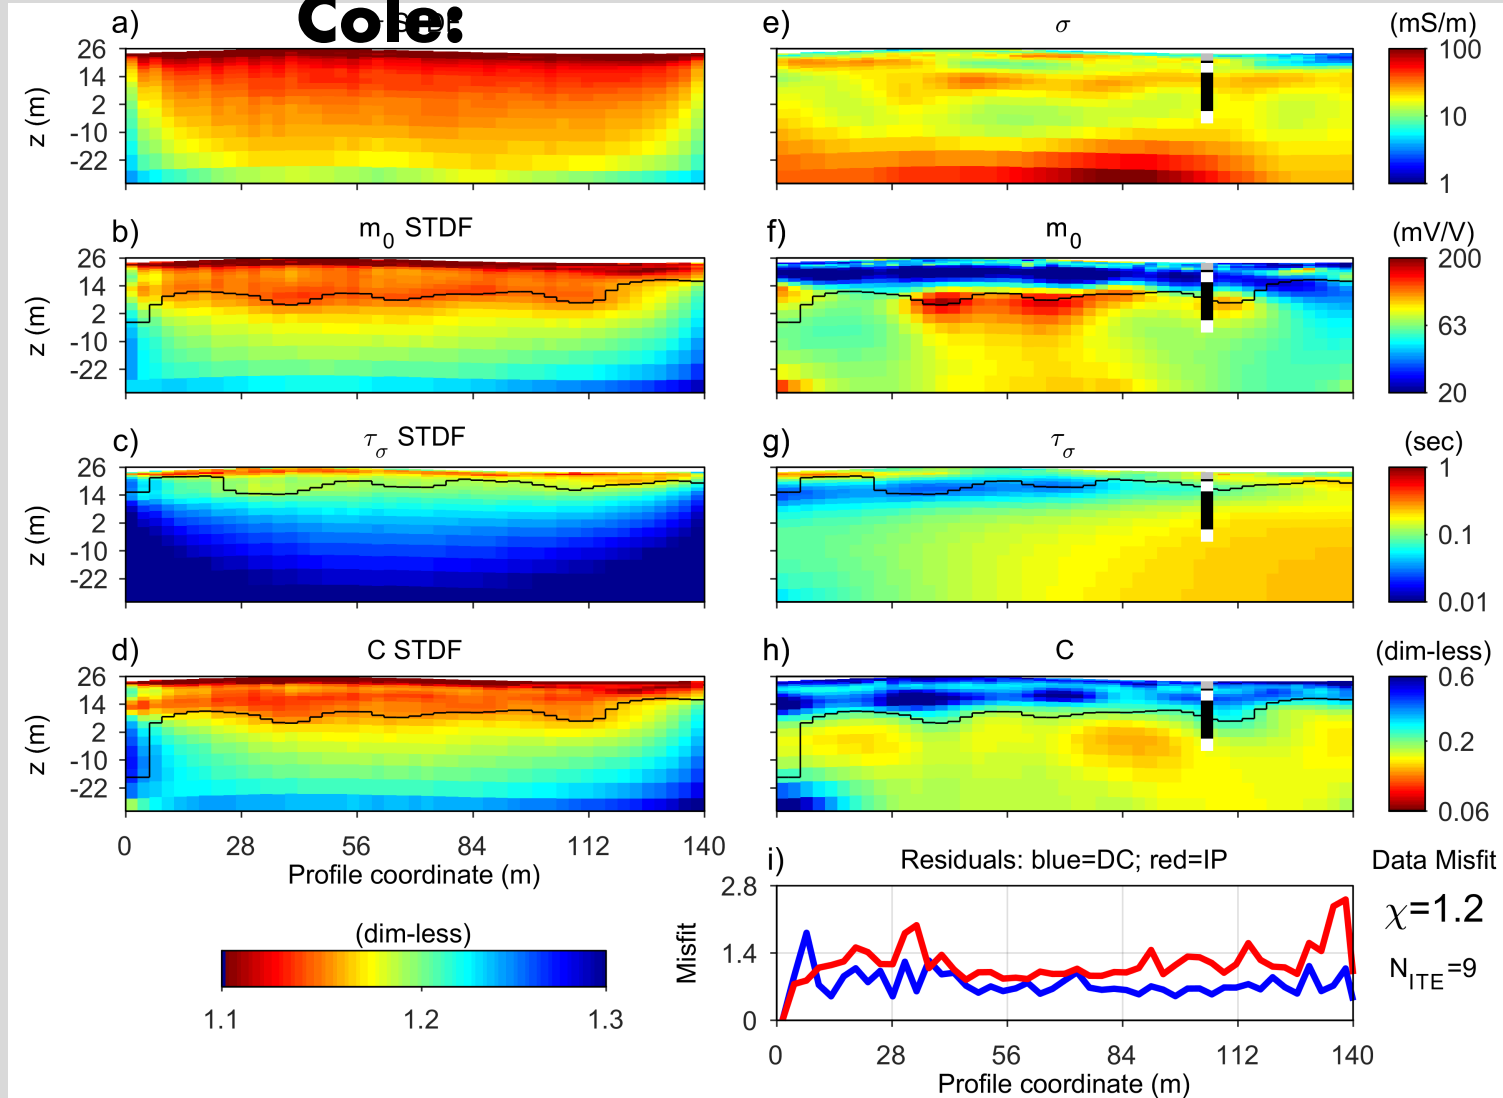

a) Time-domain: CCC

Model re-parameterization

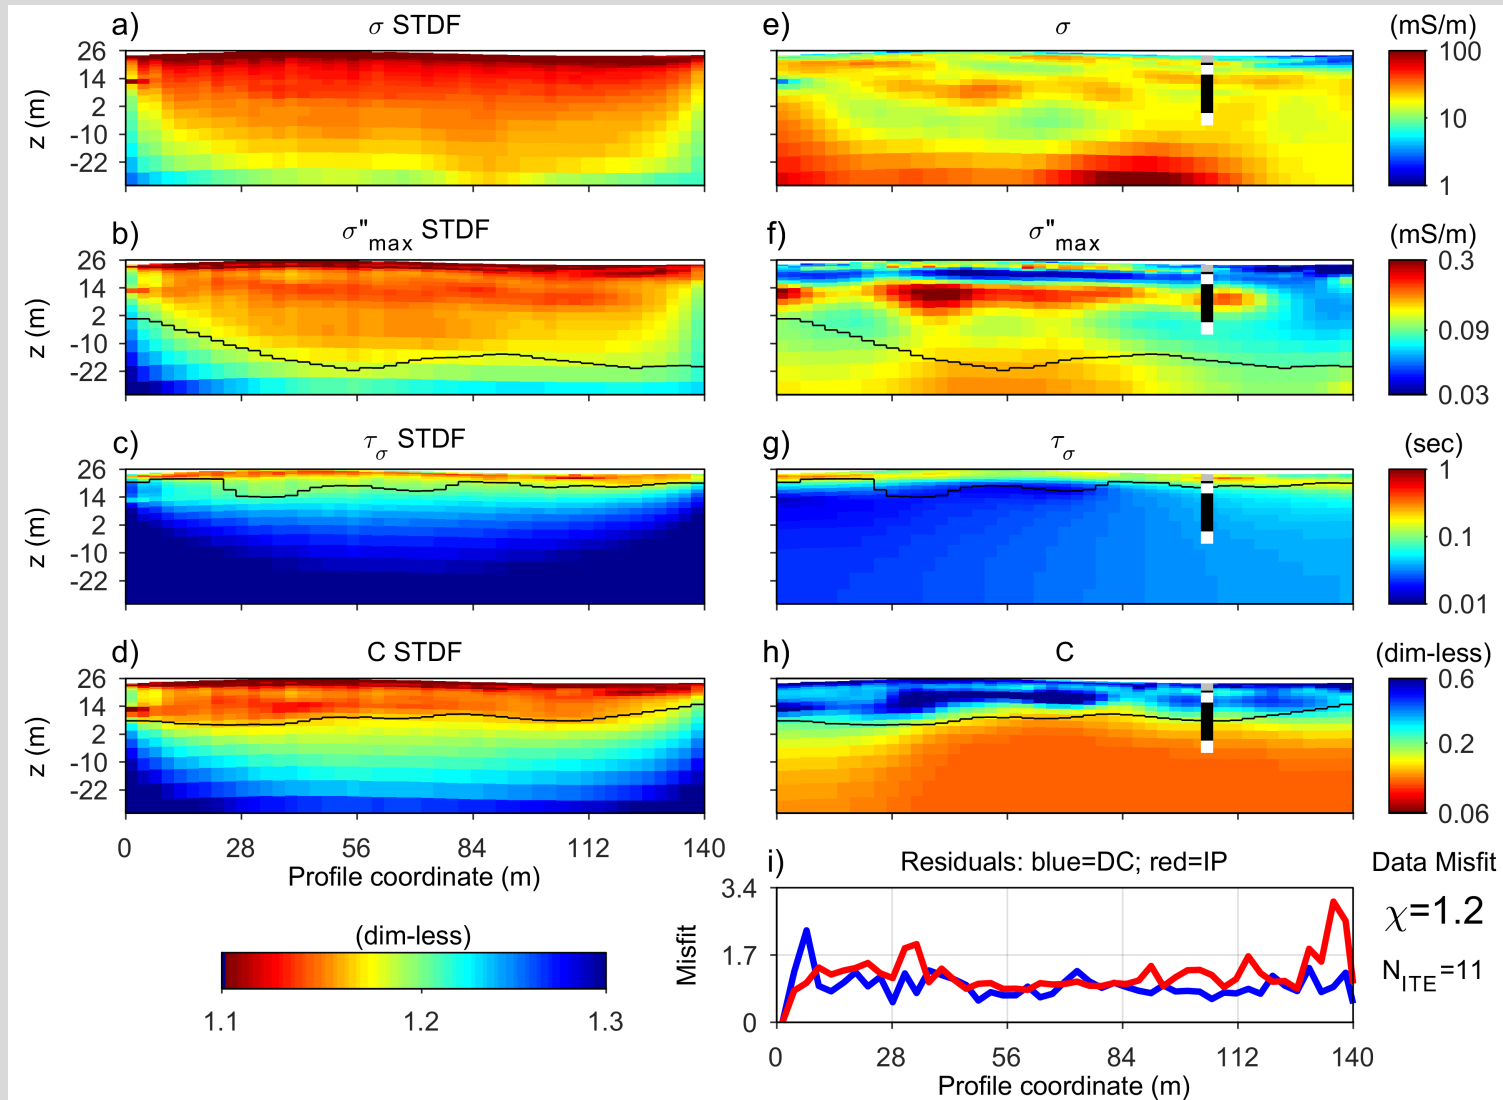

Classic Cole-Cole:

$$\{ \sigma_0, m_0, \tau_\sigma, C \}$$

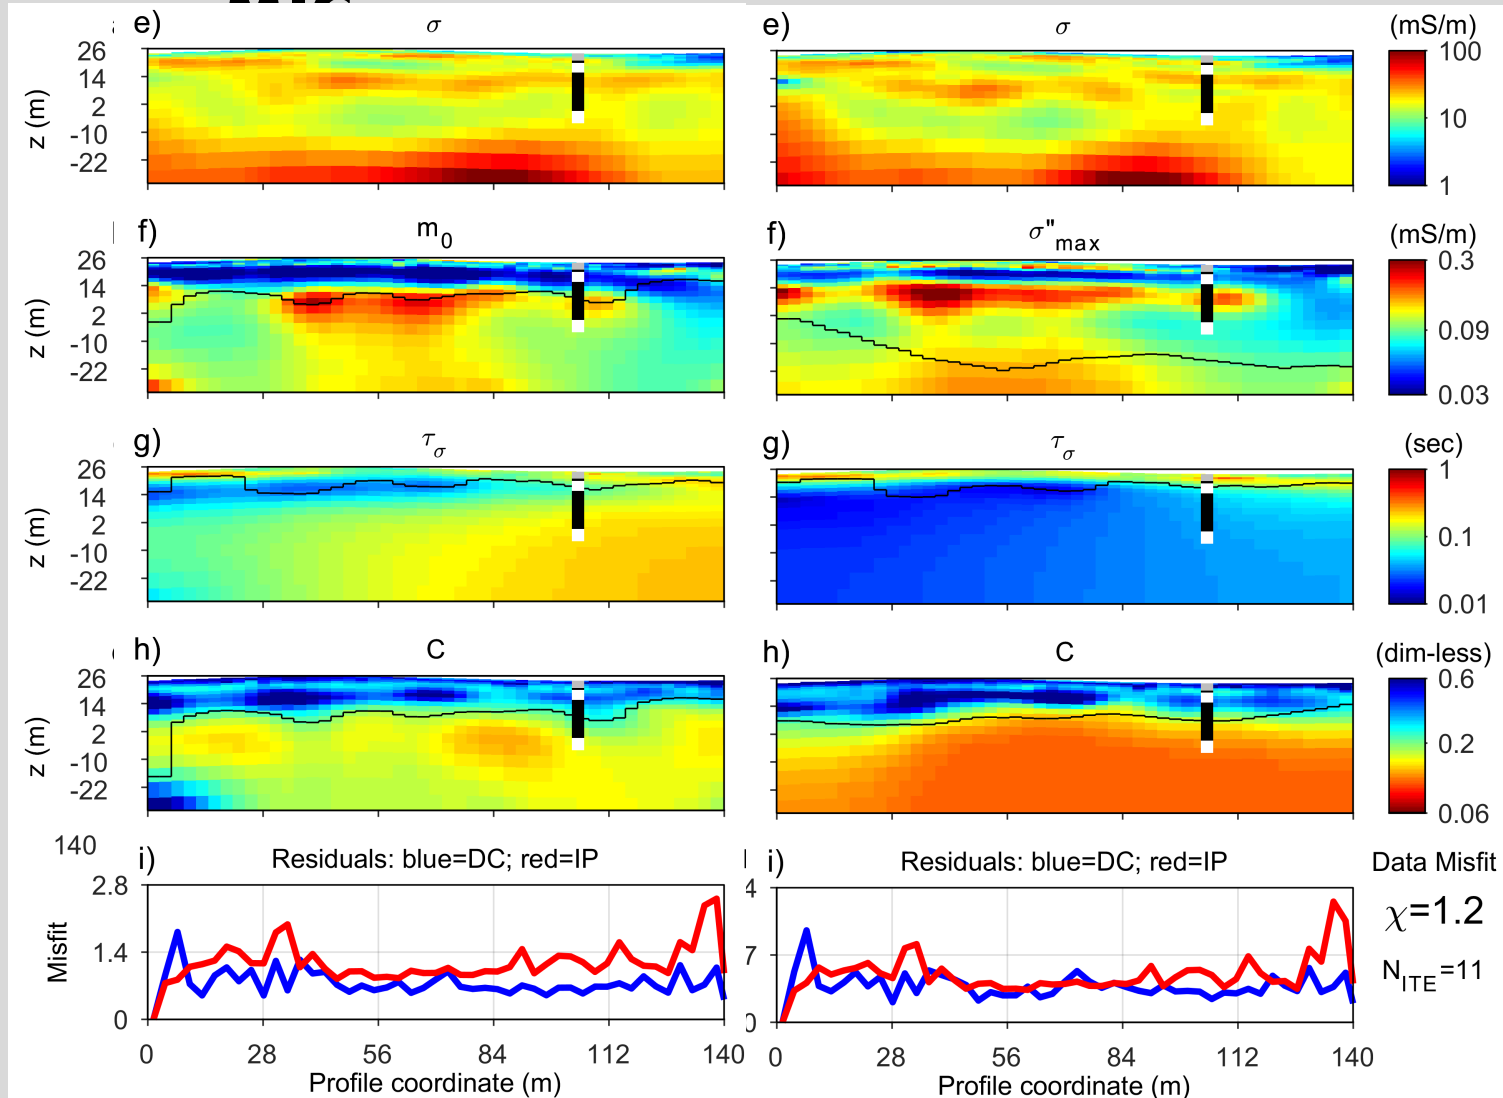

Model re-parameterization

$$\text{MIC: } \{ \sigma_0, \sigma''_{max}, \tau_\sigma, C \}$$

Model re-parameterization

Classic Cole-Cole

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

MIC compared to classic Cole-Cole

- Smaller parameter correlations
- Resolution of σ''_{max} much better than m_0
- Deeper DOI
- Closer link to Archie's law

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

MIC compared to classic Cole-Cole

- Smaller parameter correlations
- Resolution of σ''_{max} much better than m_0
- Closer link to Archie's law

But

- Bulk conduction and surface conduction are not separated

$$\sigma_0 = \sigma_{bulk} + \sigma'_{surf}(\omega = 0) \quad \sigma_{bulk} := \frac{1}{F} \sigma_W$$

Model re-parameterization: link between σ' and σ''

$$\sigma''_{surf} = l \cdot \sigma'_{surf} = 0.042 \cdot \sigma'_{surf}$$
$$l = 0.042$$

Figure 3. The dependence of imaginary conductivity (σ'') on surface conductivity (σ'_{surf}) for the entire database shown in Table 1. The value of σ'' at 1 Hz was used here. The best-fit line shows the single linear fit to the entire data set where $l = 0.042$ with $R^2 = 0.911$.

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

Bulk & imaginary conductivity (BIC):

$$\{\sigma_{bulk}, \sigma''_{max}, \tau_\sigma, C\}$$

$$\sigma_{bulk} := \frac{1}{F} \sigma_W \quad \sigma_0 = \sigma_{bulk} + \sigma'_{surf}(\omega = 0)$$

$$\sigma''_{surf}\left(\omega = \frac{1}{\tau_\sigma}\right) = l \cdot \sigma'_{surf}(\omega = 0)$$

Model re-parameterization

Classic Cole-Cole:

$$\{\sigma_0, m_0, \tau_\sigma, C\}$$

Maximum imaginary conductivity (MIC):

$$\{\sigma_0, \sigma''_{max}, \tau_\sigma, C\}$$

Bulk & imaginary conductivity (BIC):

$$\{\sigma_{bulk}, \sigma''_{max}, \tau_\sigma, C\}$$

BIC compared to MIC

- Similar resolution of parameters
- Disentangled bulk and surface conduction
- High $\sigma''_{max} \Rightarrow$ High σ_0
- Perfectly suited for permeability estimation
