

Sub-Audio Magnetics (SAM)

Galvanic Source EM Example

Central Bore, WA

Chris Parker

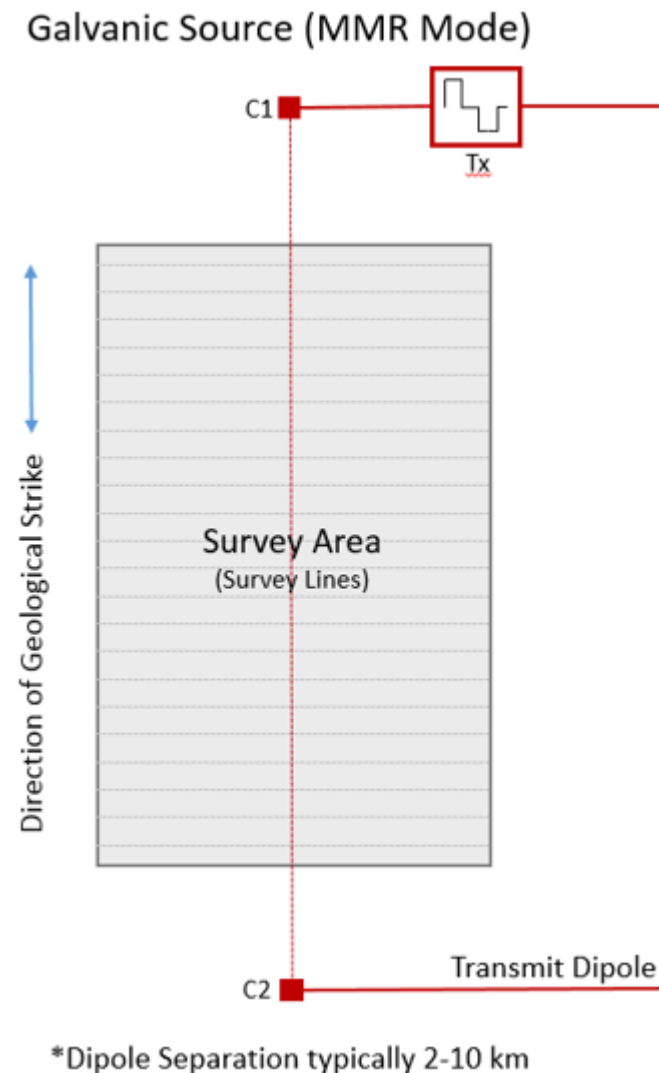

Senior Geophysicist

Gap Geophysics Australia

SAM MMR Surveys

- Current channelling technique suitable for mapping vertical / sub-vertical linear stratigraphy and structures
 - Rapid acquisition
 - Extremely high detail
 - Multi-parameter data sets
 - Relatively inexpensive – value for money
 - TMI / MMC data sets offer multiple, complementary views of the geology
 - Recent refinement of Galvanic Source TFEM .

- Examples
 - Polar Bear – Salt Lake Survey, WA
 - Gold Road – Yamarna Belt Survey, WA

SAM MMR Case Study – Polar Bear, WA

- SAM from Polar Bear Prospect, WA (Sirius)
- Towed sled on salt lake
- Extremely conductive area
- Smaller survey grids
- Approx 20 grids
- Approx 30 sq km
- Approx 600 line km
- 20 days to survey
- Tx freq – 1Hz
- Current ~15A
- Sees fine detail of stratigraphy and structure to allow definition of new gold and nickel targets

* From a Presentation by Mark Bennett (Sirius Resources) at the Sydney Resources Roundup, 12th May 2010

Survey Layout

SAM Survey – Central Bore Yamarna Belt, WA

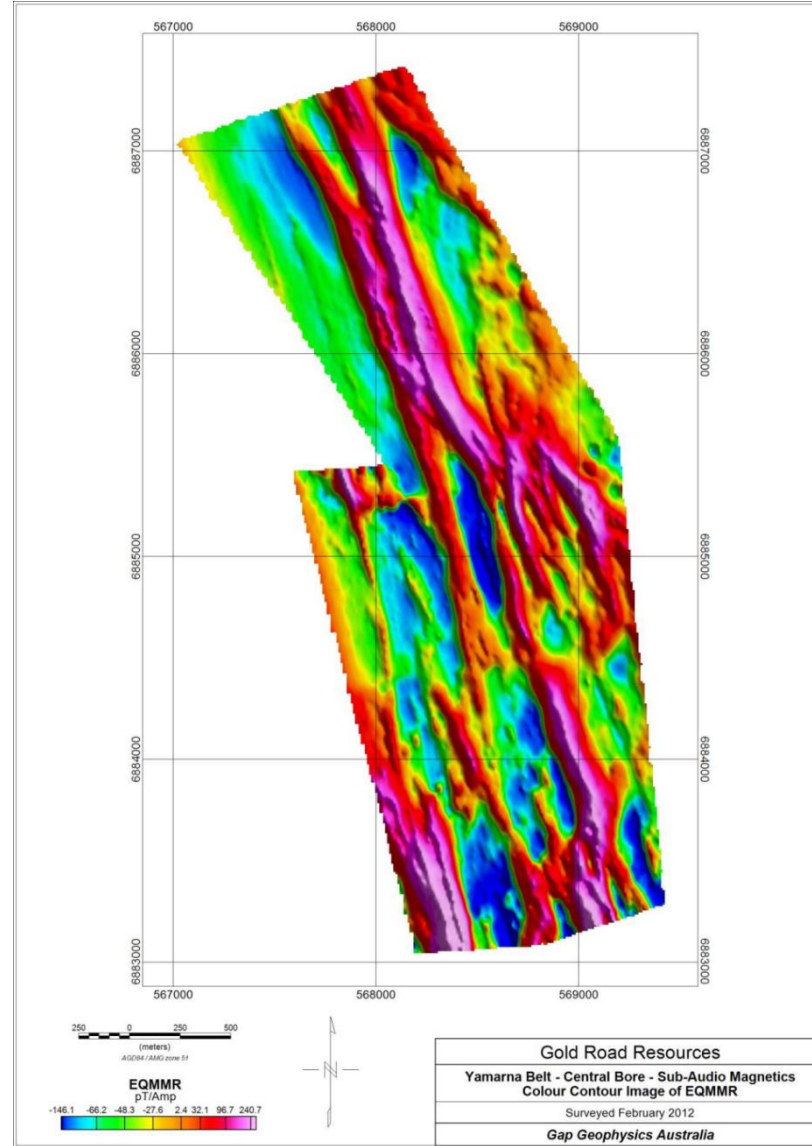

- Ground Acquisition
- Moderate Conductivity
- Surveyed as three grids
- Approx 6 sq km
- 120 line km
- 7 days acquisition
- Tx freq – 8 Hz
- Current ~20A
- Designed to map stratigraphy and structure to allow definition of new gold and nickel targets

SAM MMR Example - Central Bore, WA

Total Magnetic Intensity

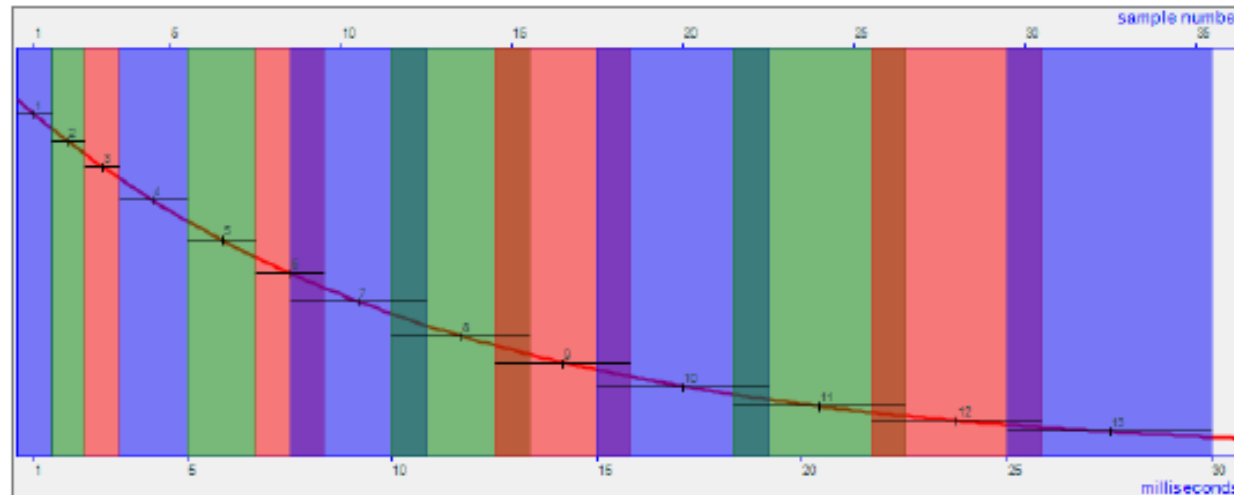

Magnetometric Conductivity

Galvanic Source TFEM Channels

Channel	Window Start (ms)	Window Centre (ms)	Window End (ms)	Window Width (ms)
1	0.833	1.250	1.667	0.833
2	1.667	2.083	2.500	0.833
3	2.500	2.917	3.333	0.833
4	3.333	4.167	5.000	1.667
5	5.000	5.833	6.667	1.667
6	6.667	7.500	8.333	1.667
7	7.500	9.167	10.833	3.333
8	10.000	11.667	13.333	3.333
9	12.500	14.167	15.833	3.333
10	15.000	17.083	19.167	4.167
11	18.333	20.416	22.500	4.167
12	21.667	23.750	25.834	4.167
13	25.000	27.500	30.000	5.000

- 2 approaches for 3D inversion under investigation by Mira Geoscience (Scott Napier) and Fullagar Geophysics (Peter Fullagar)
 - Rapid approximate inversion of EM SAM with VPEM3D
 - Minutes on a Dell Notebook
 - Full 3D solution MMR + EM with UBC-GIF 3D EM inversion programs
 - 24-36 hours on a cluster computer

3D inversion of Galvanic source SAM
