

Ground Penetrating Radar

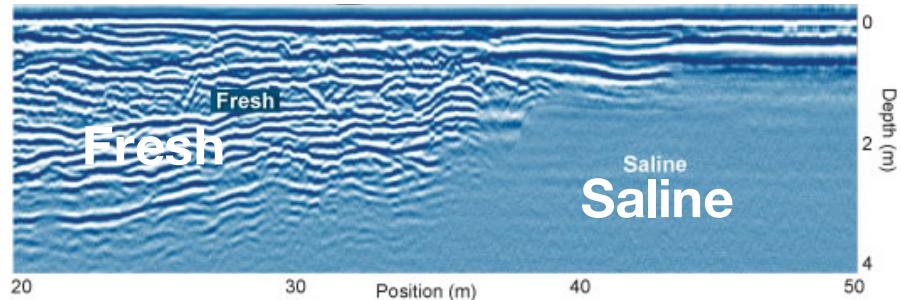

Motivation

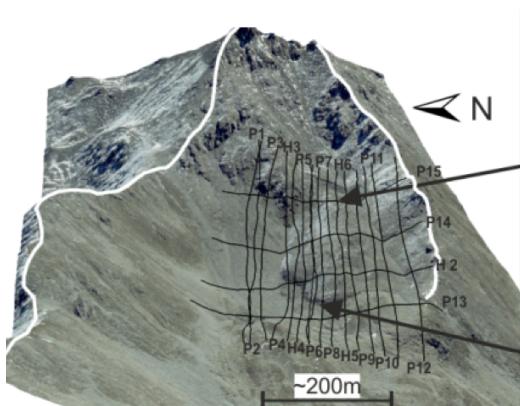

Sink holes

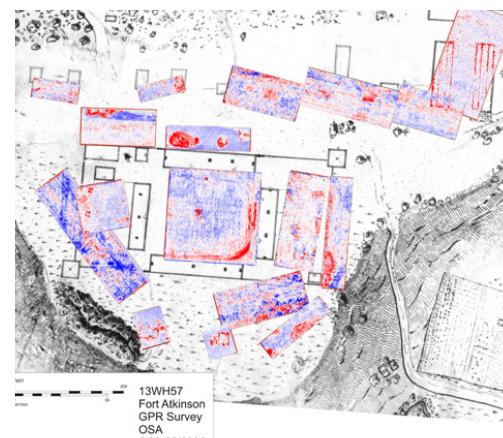

Salt Water Intrusions

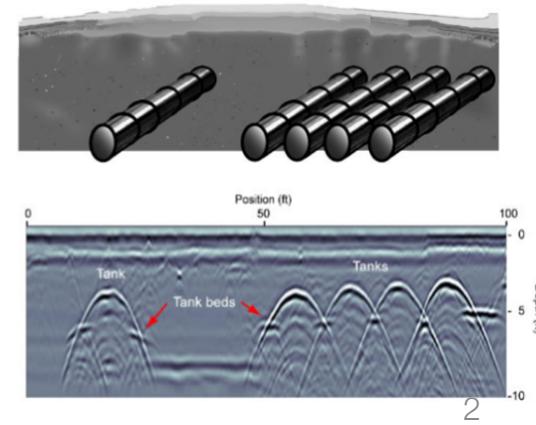

Rock glacier

Archeology

Underground tank

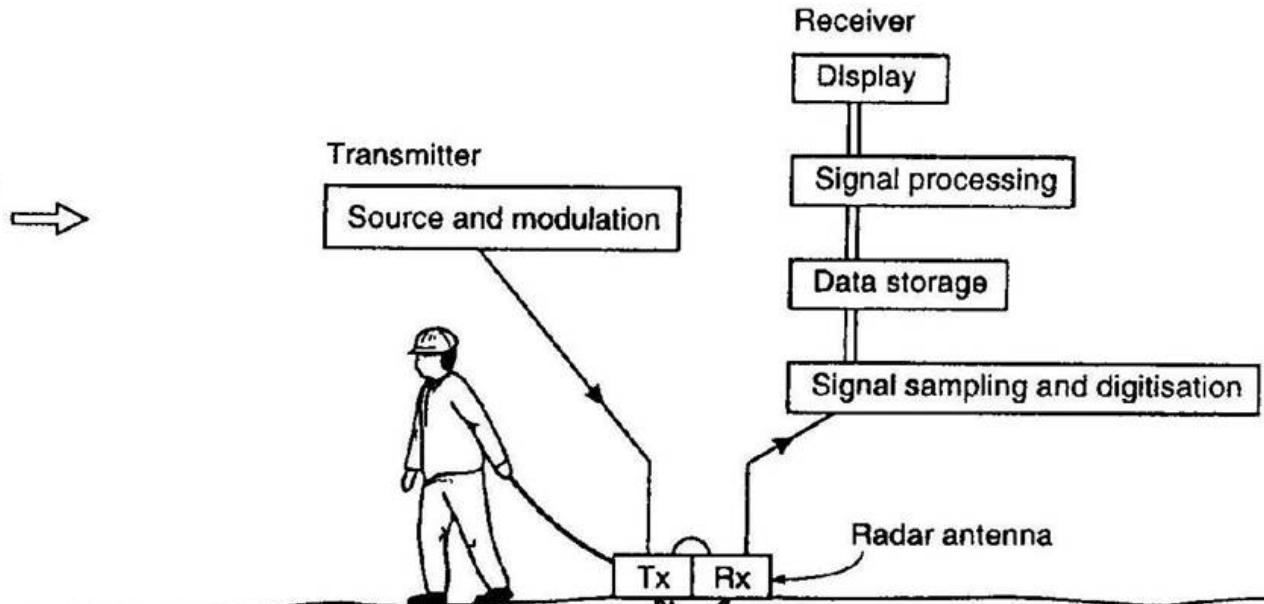

Outline

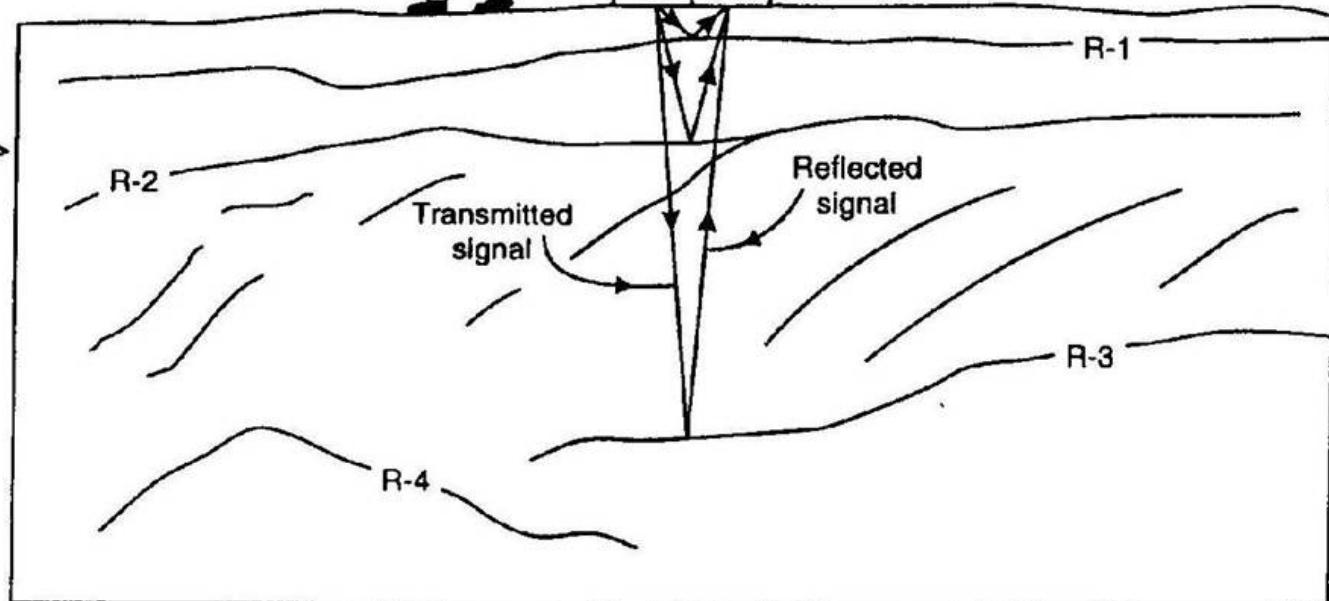

- Basic experiment
- Physical property
- Physics
- Data and Processing
- Field examples

Basic Experiment

(A) COMPONENTS OF RADAR SYSTEM

(B) INTERPRETED SECTION

Basic Equations

	Time	Frequency
Faraday's Law	$\nabla \times \mathbf{e} = - \frac{\partial \mathbf{b}}{\partial t}$	$\nabla \times \mathbf{E} = - i\omega \mathbf{B}$
Ampere's Law	$\nabla \times \mathbf{h} = \mathbf{j} + \frac{\partial \mathbf{d}}{\partial t}$	$\nabla \times \mathbf{H} = \mathbf{J} + i\omega \mathbf{D}$
No Magnetic Monopoles	$\nabla \cdot \mathbf{b} = 0$	$\nabla \cdot \mathbf{B} = 0$
Constitutive Relationships (non-dispersive)	$\mathbf{j} = \sigma \mathbf{e}$ $\mathbf{b} = \mu \mathbf{h}$ $\mathbf{d} = \epsilon \mathbf{e}$	$\mathbf{J} = \sigma \mathbf{E}$ $\mathbf{B} = \mu \mathbf{H}$ $\mathbf{D} = \epsilon \mathbf{E}$

* Solve with sources and boundary conditions

Basic Equations: Wave Equation

First order equations

$$\nabla \times \mathbf{e} = - \frac{\partial \mathbf{b}}{\partial t} \quad \mathbf{j} = \sigma \mathbf{e}$$

$$\nabla \times \mathbf{h} = \mathbf{j} + \frac{\partial \mathbf{d}}{\partial t} \quad \mathbf{b} = \mu \mathbf{h}$$

$$\mathbf{d} = \varepsilon \mathbf{e}$$

Second order equations

$$\nabla^2 \mathbf{h} - \underbrace{\mu\sigma \frac{\partial \mathbf{h}}{\partial t}}_{\text{diffusion}} - \underbrace{\mu\varepsilon \frac{\partial^2 \mathbf{h}}{\partial t^2}}_{\text{wave propagation}} = 0$$

In frequency

$$\nabla^2 \mathbf{H} + k^2 \mathbf{H} = 0$$

$$k^2 = \omega^2 \mu \varepsilon - i \omega \mu \sigma$$

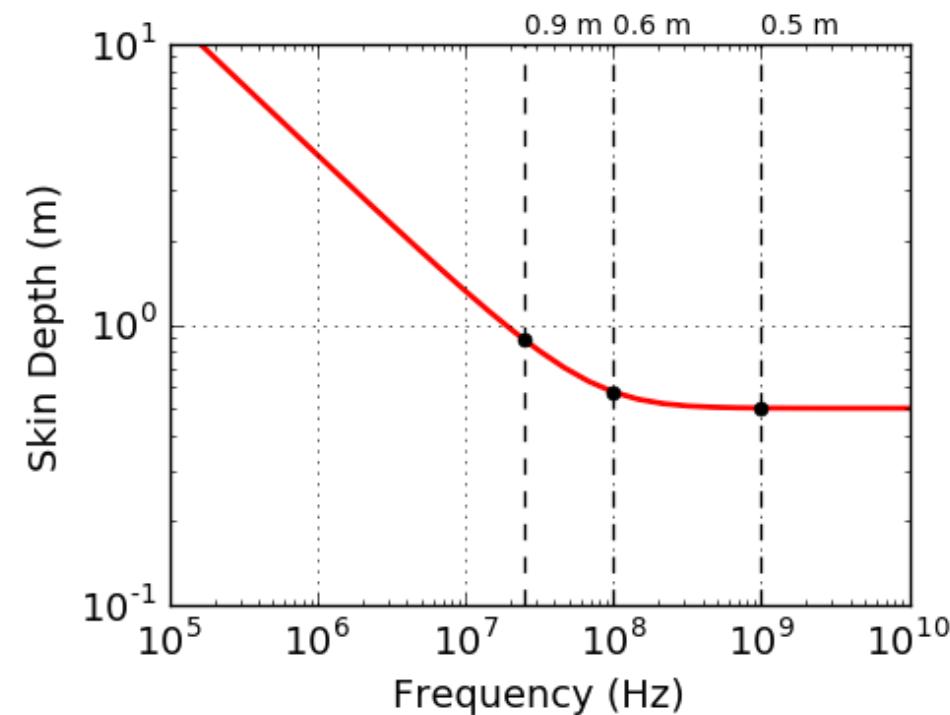

Physical properties

$$v = \frac{c}{\sqrt{\epsilon}}$$

Material	ϵ_r	V_{avg} (m/ns)	σ (ms/m)	Penetration Depth (m)
Air	1	3	0	∞
Fresh Water	80	0.033	0.5	285
Sea Water	80	0.01	3000	< 0.1
Ice	3 - 4	0.16	0.01	3000
Dry Sand	3 - 5	0.15	0.01	3200
Saturated Sand	20 - 30	0.06	0.1 - 1	145
Limestone	4 - 8	0.12	0.5 - 2	30
Shales	5 - 15	0.09	1 - 100	1
Silts	5 - 30	0.07	1 - 100	1.3
Clays	5 - 40	0.06	2 - 1000	0.2
Granite	4 - 6	0.13	0.01 - 1	65
Anhydrites	3 - 4	0.13	0.01 - 1	55

Attenuation: Skin Depth

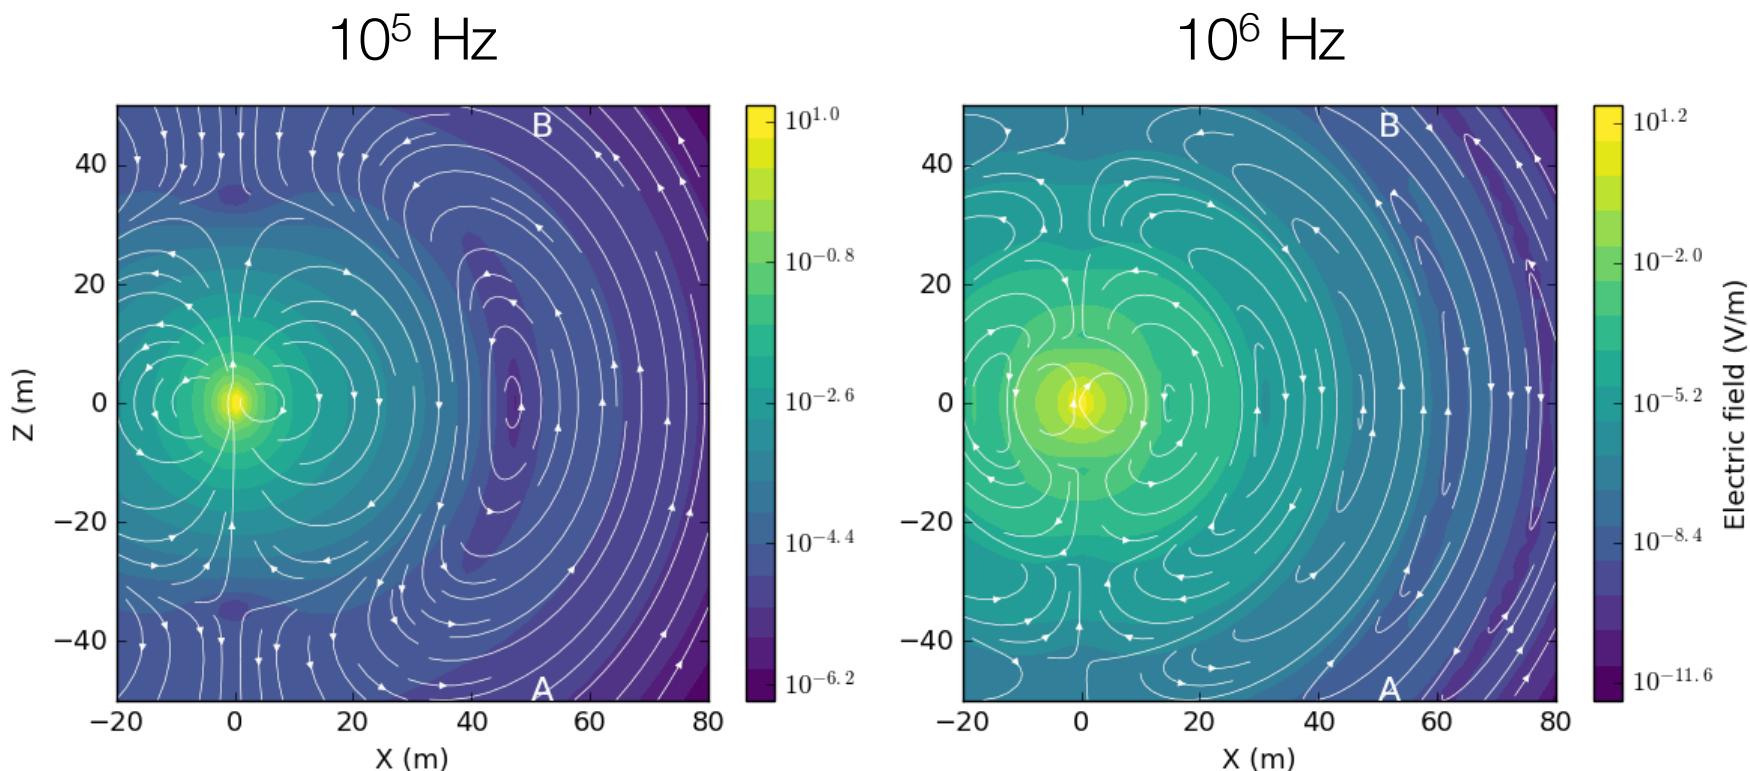

δ : skin depth

$$\delta \approx \begin{cases} 503 \sqrt{\frac{1}{\sigma f}} & \text{for } \omega\epsilon \ll \sigma \\ 0.0053 \frac{\sqrt{\epsilon_r}}{\sigma} & \text{for } \sigma \ll \omega\epsilon \end{cases}$$

for $\omega\epsilon \ll \sigma$

for $\sigma \ll \omega\epsilon$

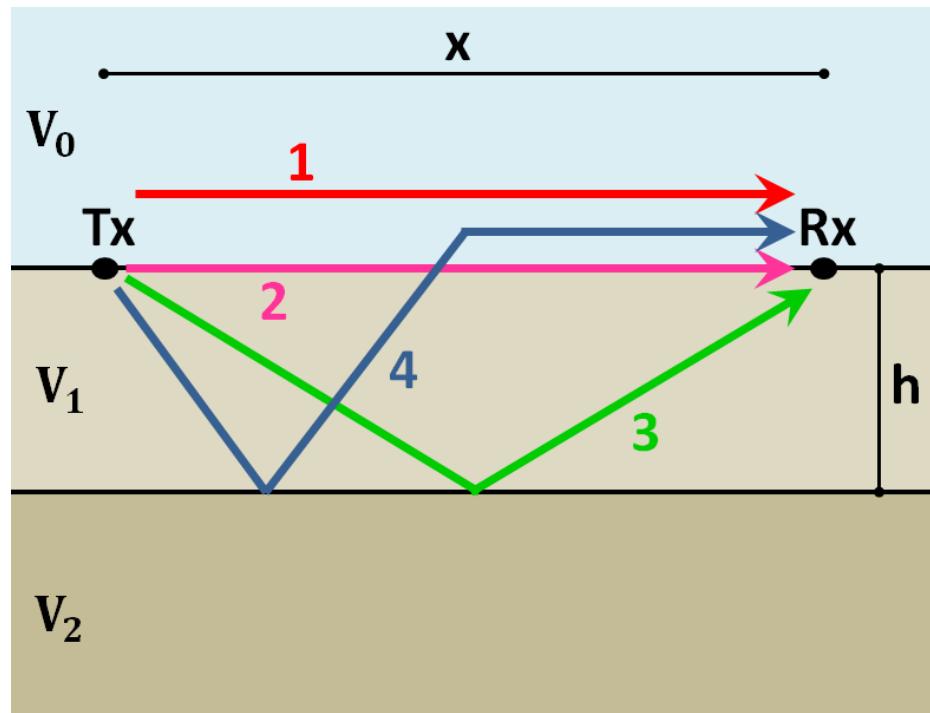

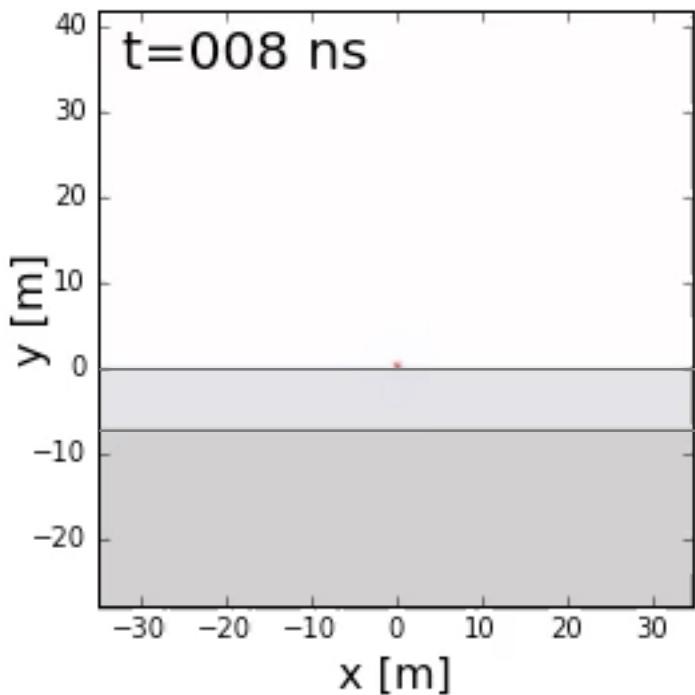

Electric Dipole in a Whole Space

$$\lambda = \frac{v}{f}$$

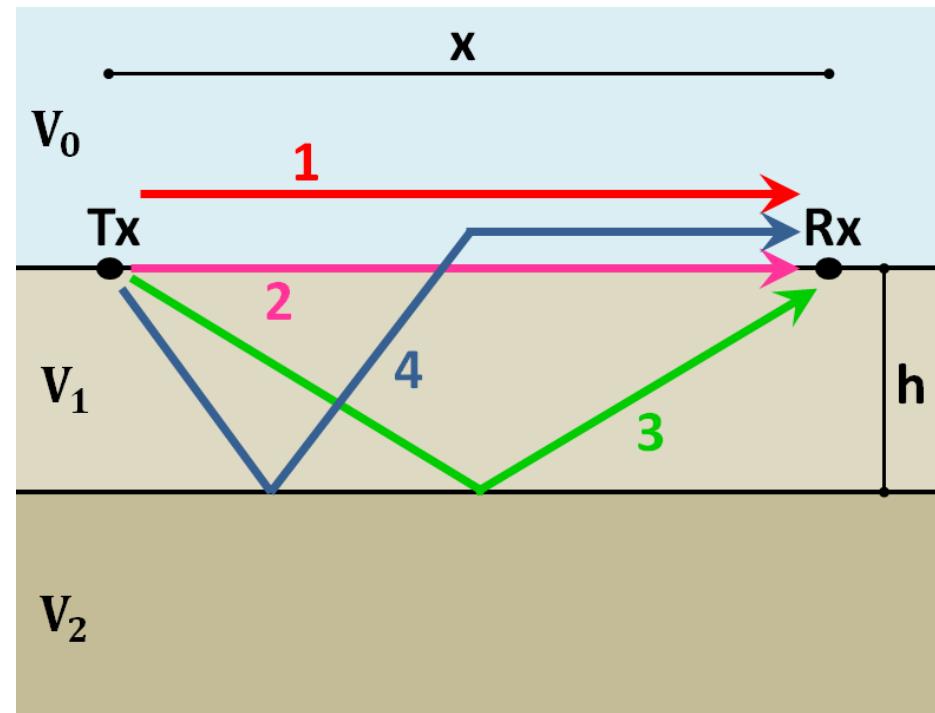

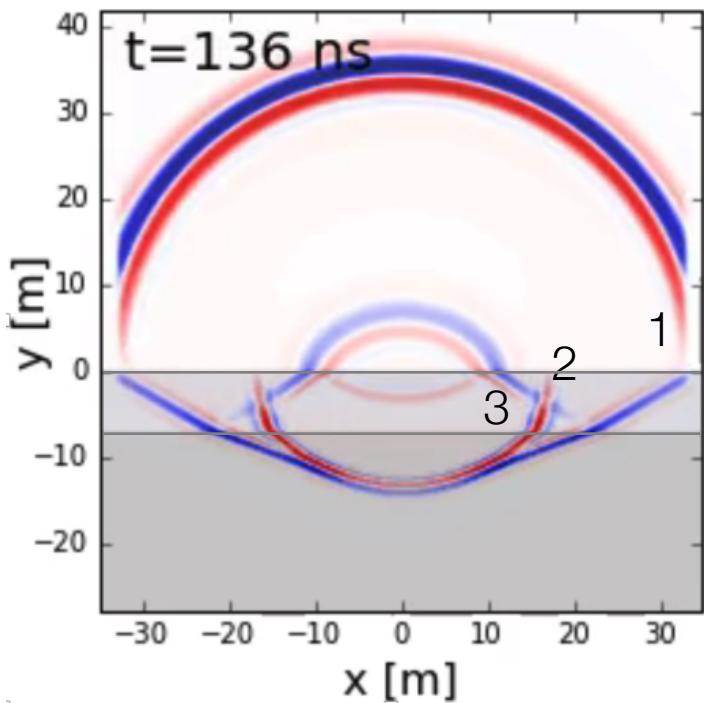

Waves and Rays

$$v = \frac{c}{\sqrt{\epsilon}}$$

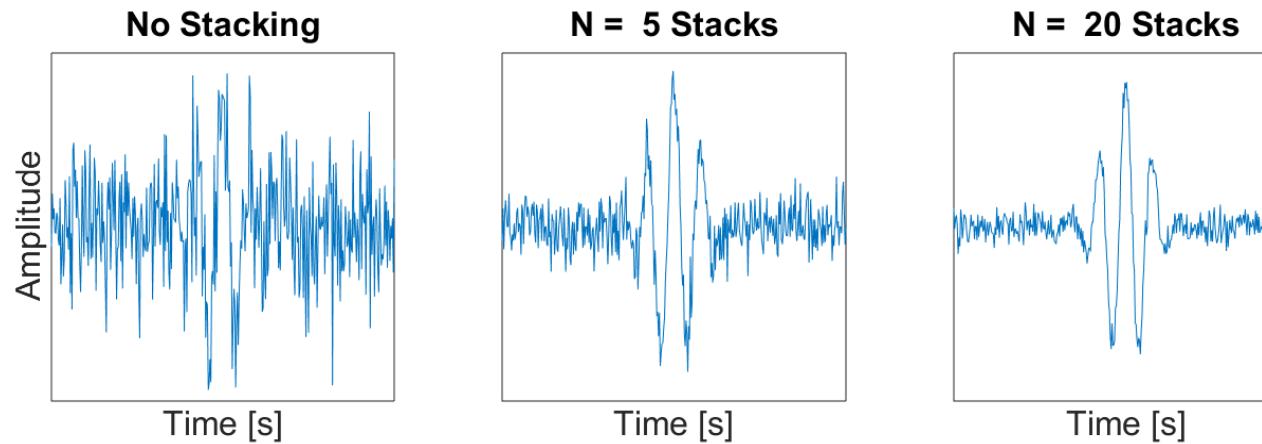

Waves and Rays

$$v = \frac{c}{\sqrt{\epsilon}}$$

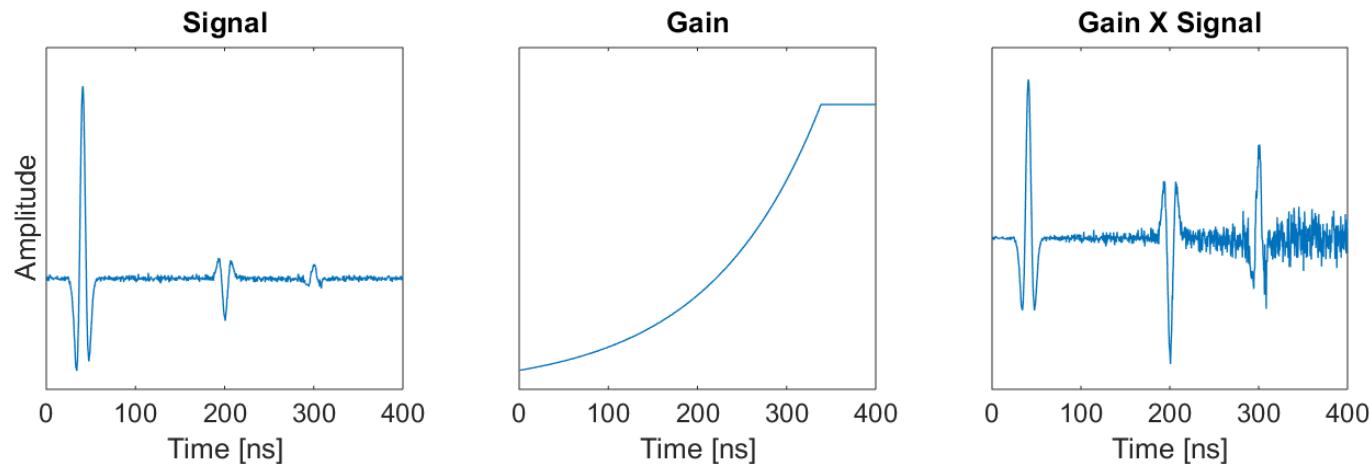

Processing

Stacking

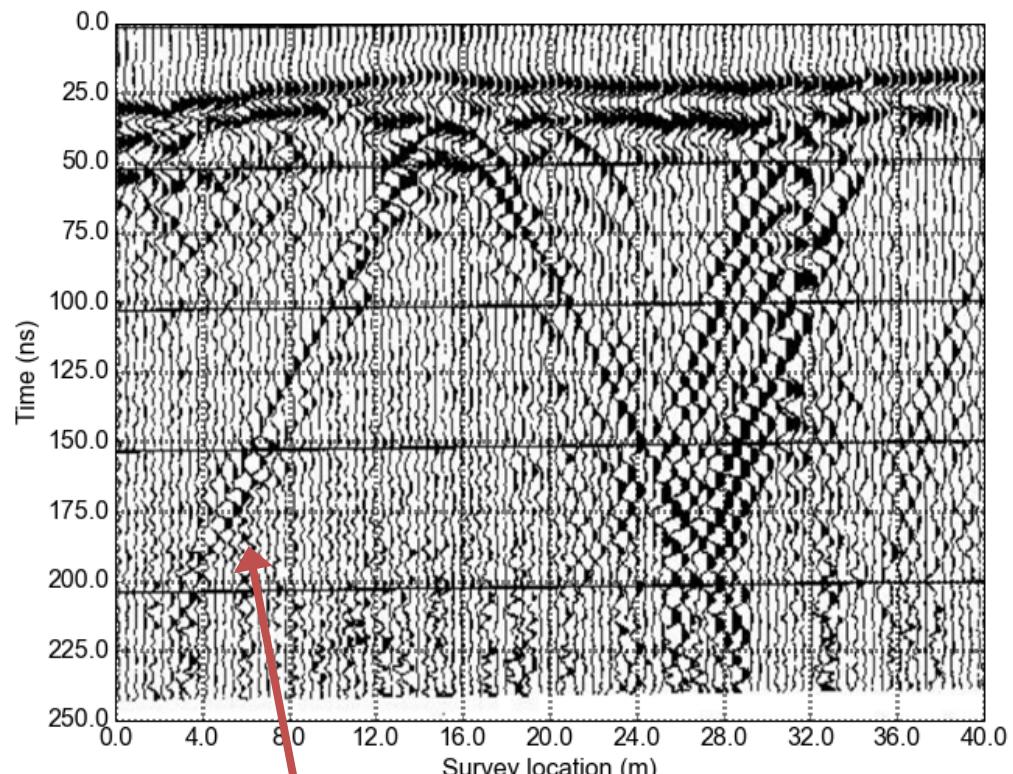

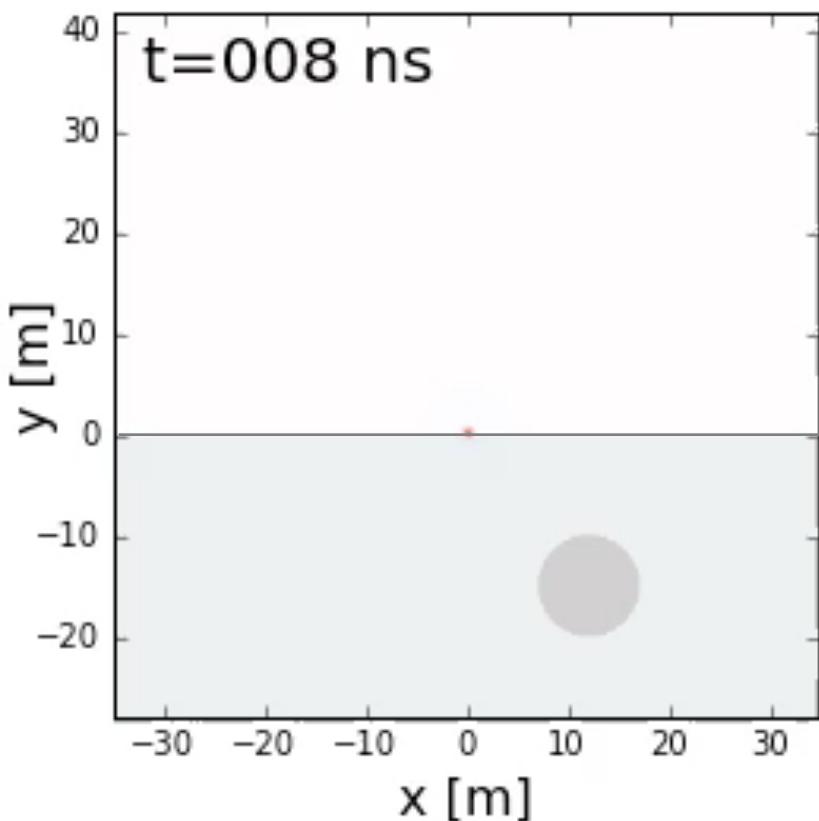

Gain Control

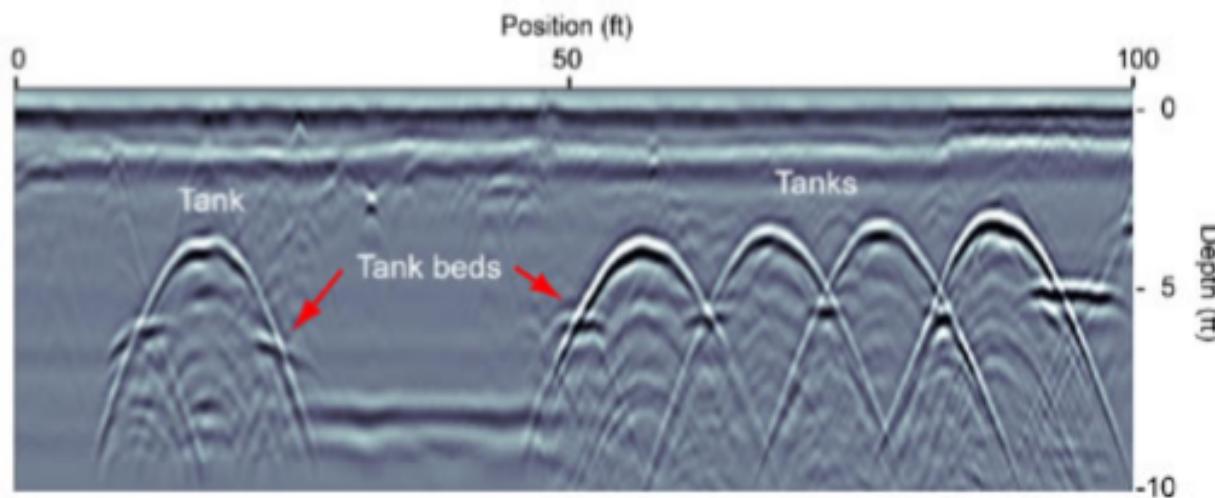

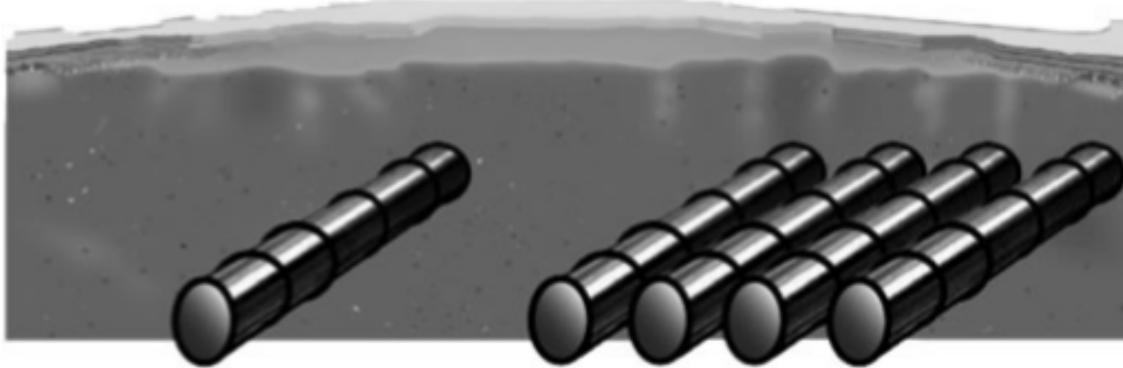

Radargrams

$$v = \frac{c}{\sqrt{\epsilon}}$$

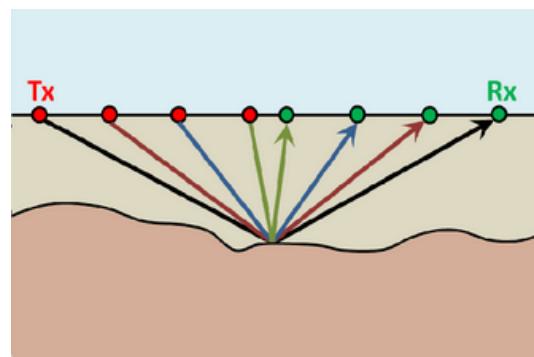

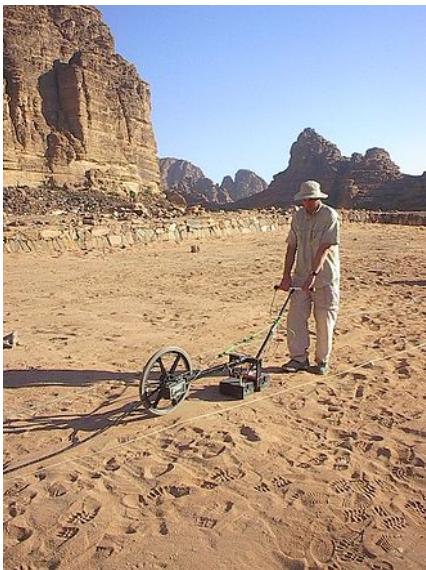

Hyperbola
slope $\sim 2/v$

Common offset

Outline

- Basic experiment
- Physical property
- Physics
- Data and Processing
- Questions?
- Field examples

Environmental Test Survey

Problem

- Characterize soil and identify potential aquifers

Why use GPR?

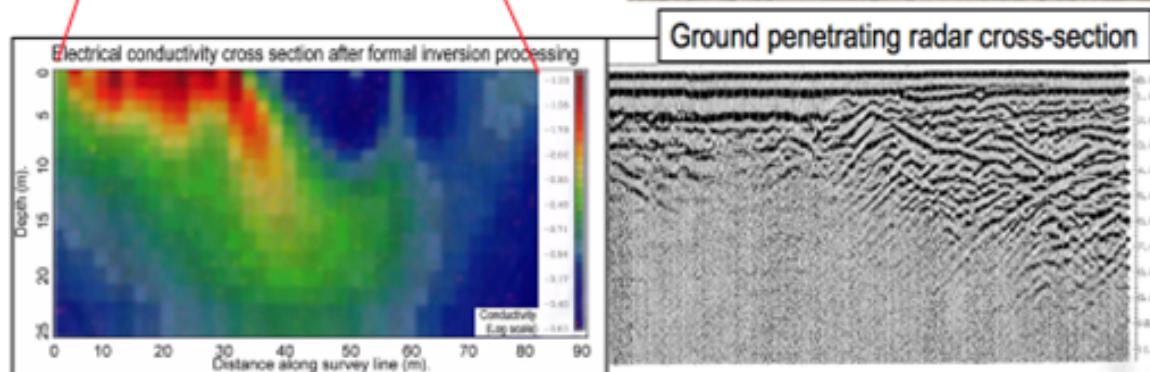

- Dielectric permittivity varies with
 - Water content
 - Lithologies

Survey and Data

- Zero offset data colocated with DC resistivity

Processing and Interpretation

- Attenuation of GPR signals on western side: higher conductivity
- Near surface structure from reflecting events

Locating Underground Storage Tanks

Problem

- Locate buried storage tanks and tank beds

Why use GPR?

- Conductive tanks, tank beds are strong reflectors

Survey and Data

- Zero offset data (250 MHz)

Processing and Interpretation

- Hyperbolic signatures from tanks
- Flat tank-bed reflectors
- 3D image constructed from radargrams

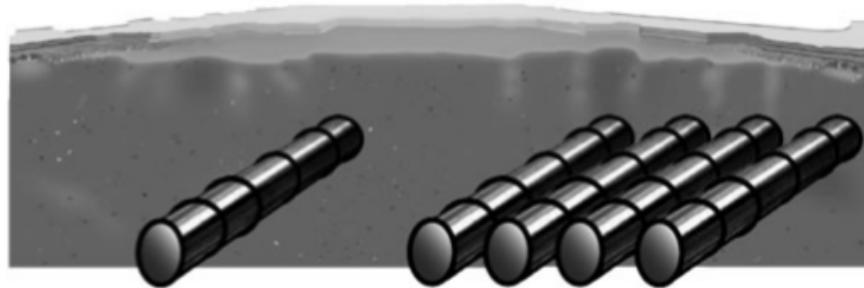

Fig. Geophysical problem

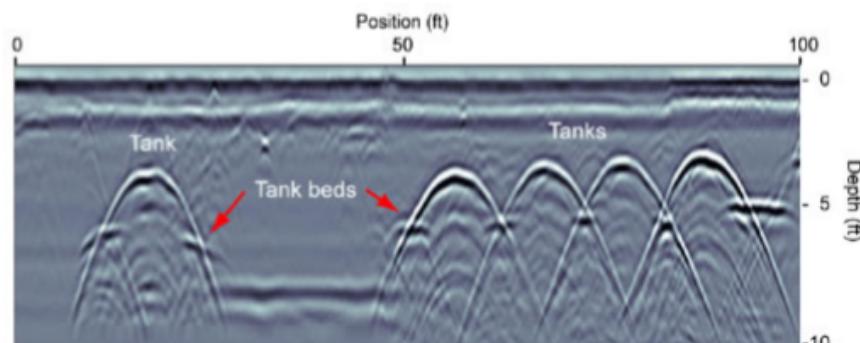

Fig. 2D Radargram profile perpendicular to storage tanks

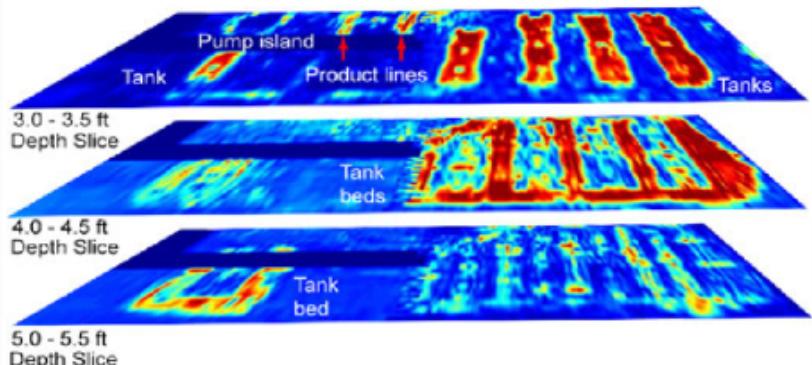

Fig. 129 3D interpolation from several GPR survey lines.

Mapping Peat Thickness

Problem

- Estimate peat thickness

Why use GPR?

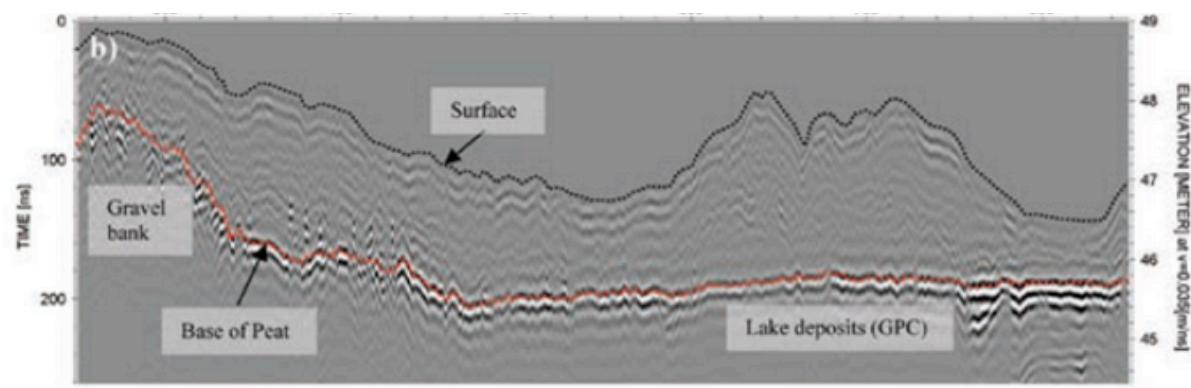

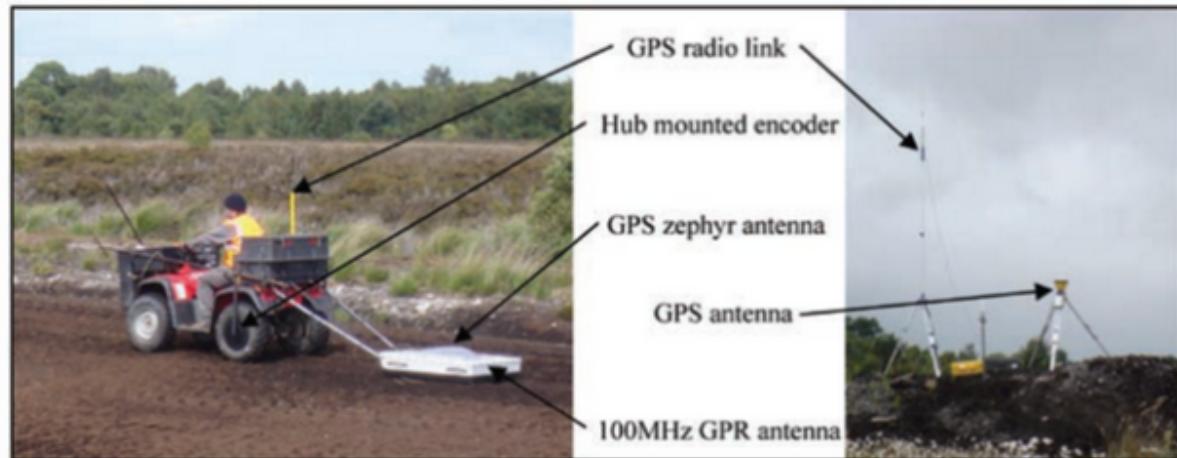

- Strong reflector at base of the peat

Survey and Data

- Zero offset data (100 MHz)
- Profiles every 60m
- LIDAR collected for local topography

Processing and Interpretation

- Arrival time to depth conversion
- Topography correction with LIDAR
- Peat layers up to 2m thick
- Additional reflectors indicate internal structure of peat

Subsurface Utility Mapping

Problem

- Locate iron-cased water pipes and PVC-cased gas lines at an intersection

Why use GPR?

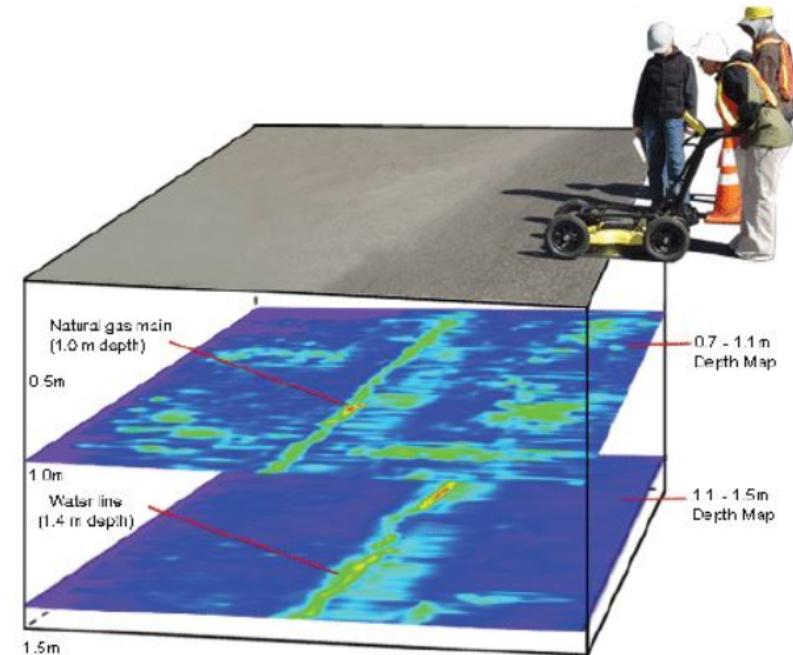

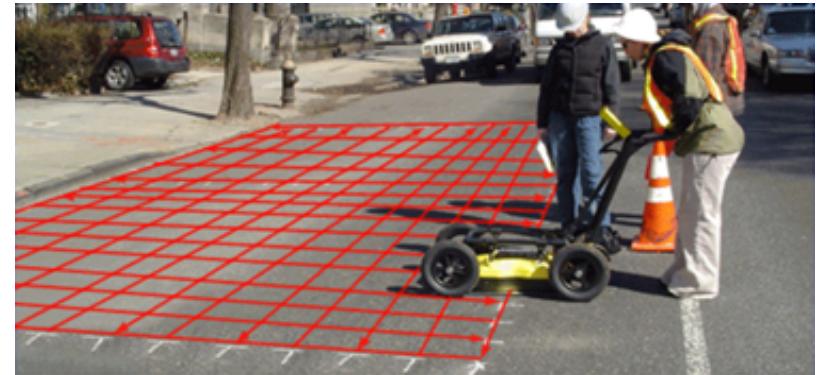

- Iron pipes very conductive → strong GPR reflector
- PVC v. low dielectric permittivity → GPR reflector

Survey and Data

- Zero offset data (250 MHz)
- 0.5m line spacing, 8m x 23m grid

Processing and Interpretation

- Arrival time to depth conversion
- Natural gas main at 1m depth
- Water line at 1.4m depth

Underground Potash mines

Problem

- Locate water/brine leaking into potash mine

Why use GPR?

- Potash has low relative permittivity (~5).
- Water/brine has high dielectric permittivity (~80).

Survey and Data

- Zero offset data along mine shaft

Processing and Interpretation

- Arrival time to depth conversion using velocity of 0.13 m/ns for anhydrites

End of GPR

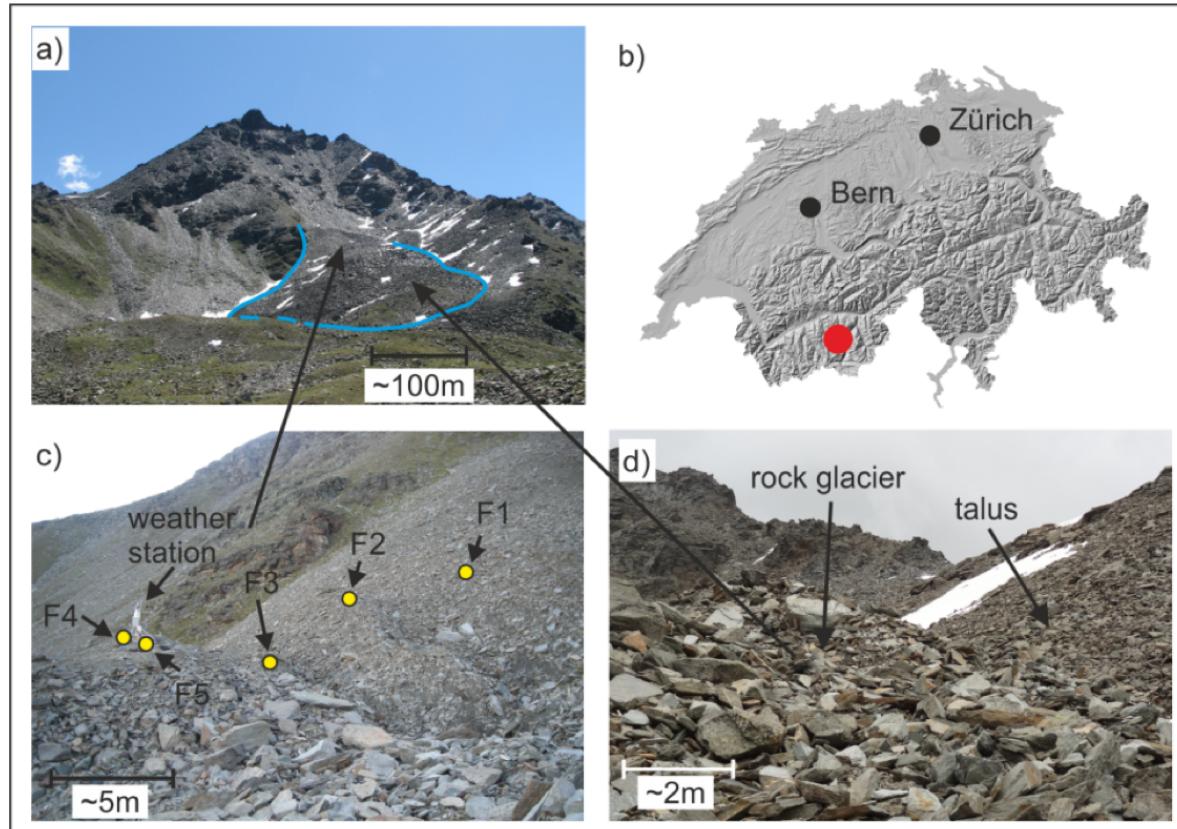

Case History: Furggwanghorn

Merz et al, 2015

Setup

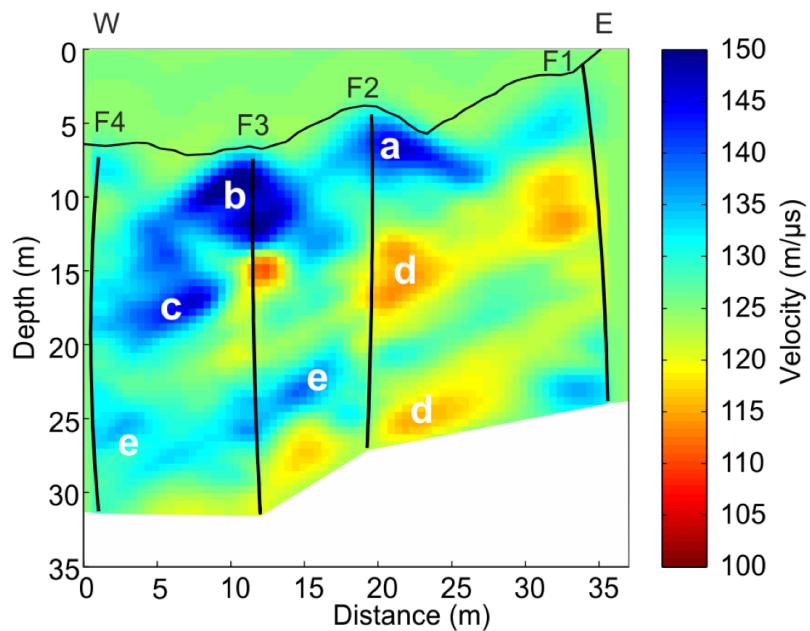

- Downslope movement shown to increase from 1.5 m/yr to 4.0 m/yr.
- Aim: characterize rock units and evolution of glacier
- Surface GPR: unsuccessful (too close to scatterers)
- Helicopter GPR used

Properties

$$v = \frac{c}{\sqrt{\epsilon}}$$

Velocity from cross well GPR

Material	Velocity (m/μs)
(a & b) Unconsolidated sediments	> 140
(c) Ice	> 140
(d) Ice + partial melt	110 - 130
(e) Compact debris	130 – 140
Saturated sediments	80 -100
Bedrock	110 -130

Survey

- Initial Ground-Based Survey
 - 2 systems
 - Frequencies: 25 MHz and 50 MHz
- Heli-GPR
 - Frequency: 60 MHz
 - Flight height: 15-20 m
 - Line separation ~15 m

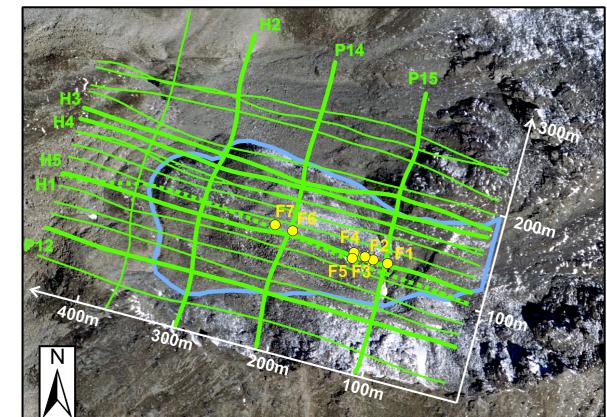

Ground-GPR

Heli-GPR

Data and Processing

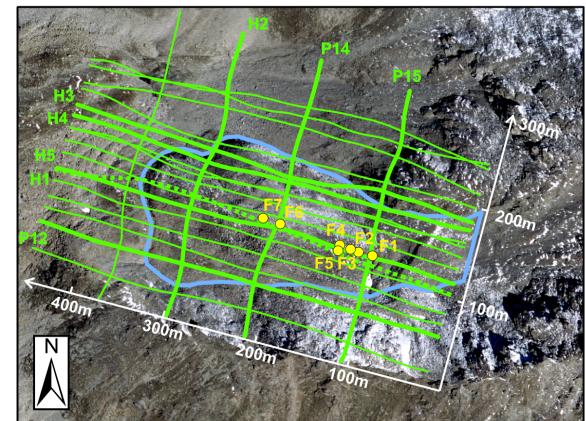

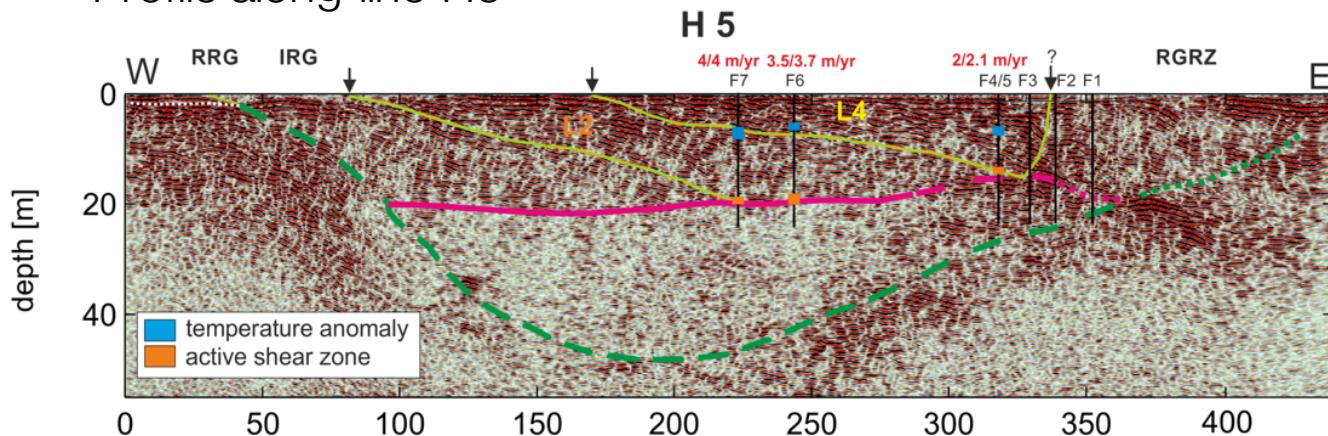

Interpretation

Profile along line H4

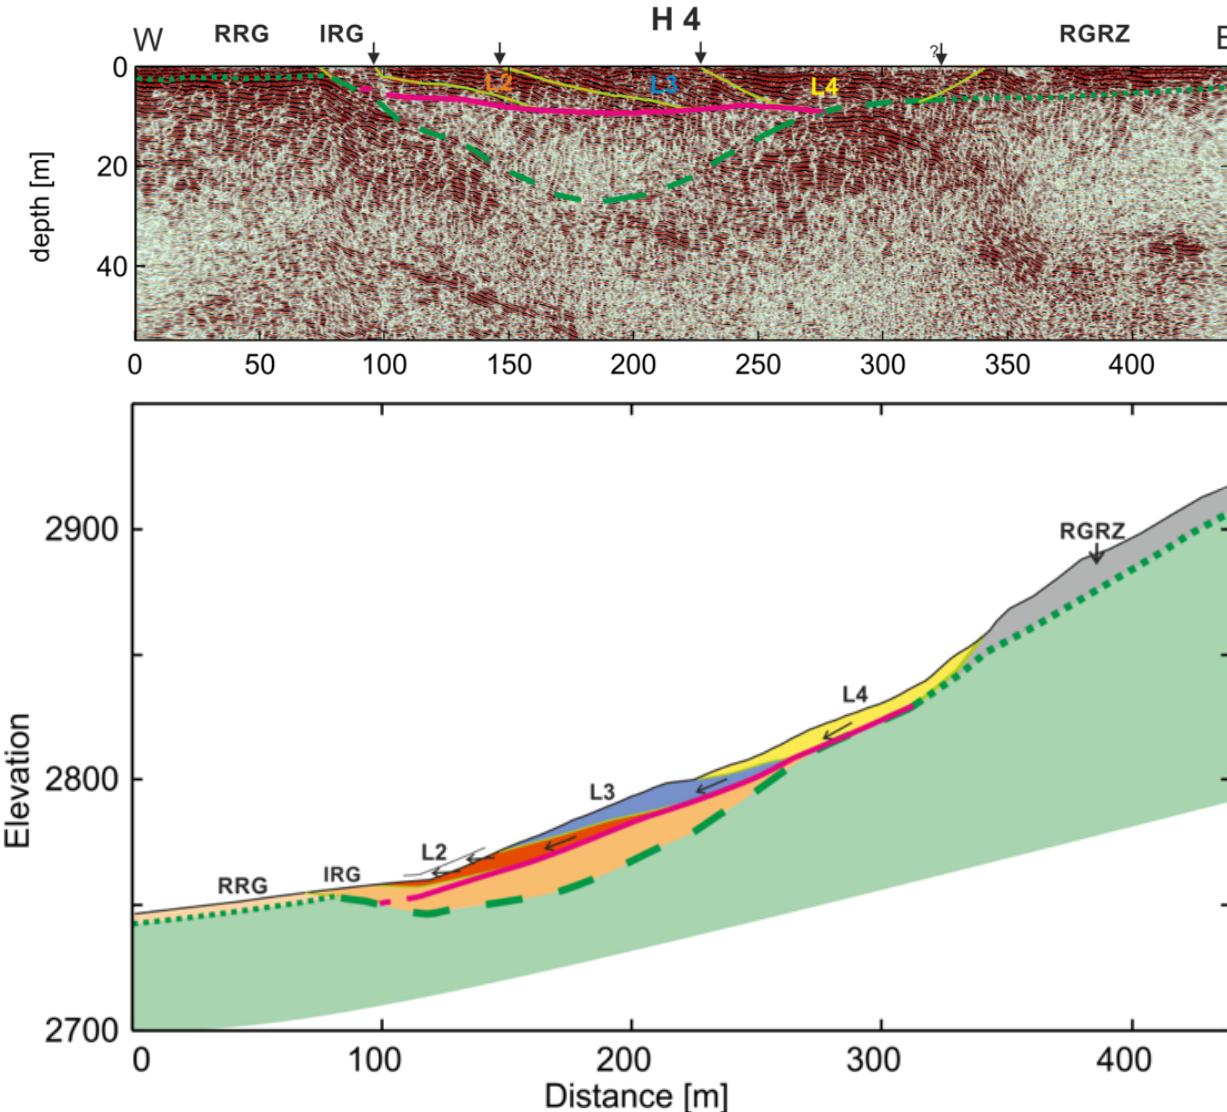

Profile along line H5

- - - Bedrock surface
- Major shear zone between ice-rich and ice-poor regions
- Fault zone boundaries of rock lobes

Synthesis

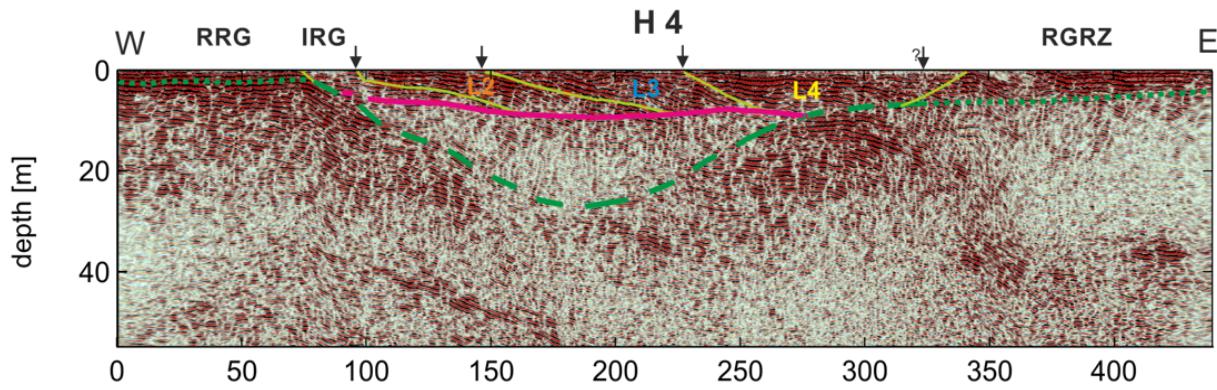

Final Structural and Kinematic Model

- Interpreted with thin-skinned tectonic model
- Major shear zone acts as a décollement
- Rock glacier lobes act as nappes
- Lobes appear to move down-slope
- Tectonic model applicable to other glaciers

Summary

- Basic experiment
- Physical property
- Physics
- Data and Processing
