

# WHAT WE DO AT FUN 4U !

Welcome to our first ever news sheet. Due to the Covid 19 pandemic we are aware that our parents no longer get to see inside our facility on a daily basis to see the children's art work or creations in our playroom. Although we are mostly outside the children do still draw create and construct lots of images sculptures and objects every day. Please like our Face Book page and you will see lots of photos of what we get up to each week.

## DAILY ROUTINE AT FUN 4U

Our routine is fairly similar every day and roughly goes as follows,  
Children enter club wash hands and get changed into play clothes  
Outdoor play in one of the following areas Woodland/ Trim Trail/ Play Yard  
Snack is served either inside or outside, which hand washing is again part of our routine before and even sometimes after depending on how messy we get  
Outdoor play is resumed sometimes in the same area as before but we do change it up a bit and try another area so that no matter what time the children arrive at from school we all can experience the different aspects of play each session.

Can we just say that all the children have settled into the routines and group so very quickly and smoothly. We are always blown away by the resilience of the children and their fantastic ability to "just get on with it" to coin a phrase .

As the days are becoming colder can we please ask that you send warm clothing for your child's change of clothes and even a hat at this early stage as we are outside up to at least 5pm in the evenings.

## What is Play teaching us?

We will introduce you all to the different types of play and what it means for the children and also let you know the types of games and activities we play so as you can have a conversational starting point with your fantastic kids.

### LOCOMOTOR PLAY.

This is physical movement especially quick moving and directional changing movement. For example Tag, 40/40, Hide and Seek, assault courses and horse jumping courses (Were the child is the animal) etc. Tree climbing is another favourite, which starts off low down mattering low branches and building confidence, balance and problem solving (positional placement of hands and feet)
