

Spring

The months of spring are March, April and May. The weather gets a little warmer and the days a little longer.

Yellow catkins make the hedges brighter. The trees now have buds from which leaves will grow.

The birds are busy building nests and laying eggs. The swallow and the cuckoo come back to Britain.

We see snowdrops and crocuses in the garden. Wild flowers like the bluebell and the primrose can also be seen. Many lambs are born in spring. They can be seen in the fields, running and jumping near their mothers. The hare is also having fun "boxing" other hares.

The farmer is busy sowing wheat and corn. In the garden we plant vegetables and flowers which will grow in the summer.

Question Time.

1. What are the months of spring?
2. How many months are there in spring?
3. What appears on the trees in spring?
4. What birds return to Britain in the spring?
5. What do the birds do in spring?
6. What flowers grow in the garden in spring?
7. What animal is born in spring?
8. What are frog's eggs called?
9. What does the farmer sow in spring?
10. Name two vegetables you can plant in your garden in spring.
