

Addition to 100 Function Machines

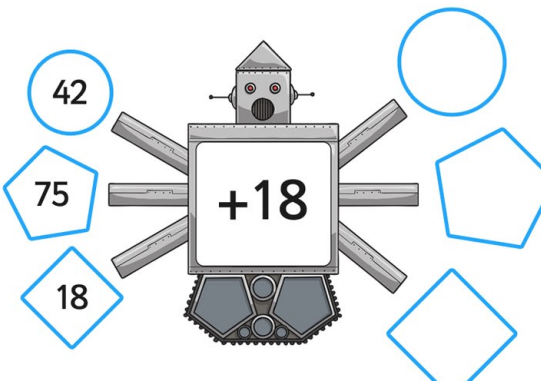

A function machine with a central box containing $+12$. It has three input shapes on the left: a circle with 53, a pentagon with 72, and a diamond with 44. It has three output shapes on the right: a circle with 65, a pentagon, and a diamond.

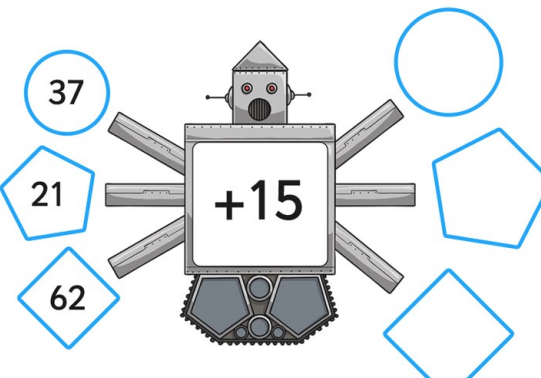

A function machine with a central box containing $+9$. It has three input shapes on the left: a circle with 29, a pentagon with 79, and a diamond with 33. It has three output shapes on the right: a circle, a pentagon, and a diamond.

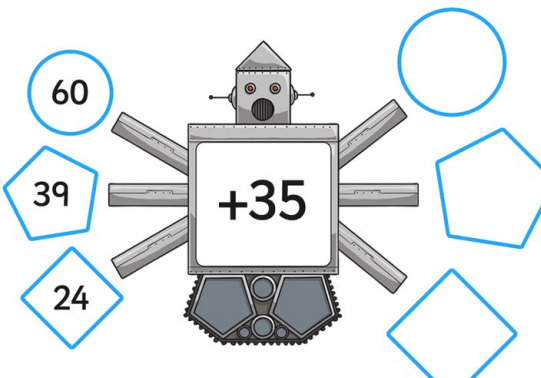

A function machine with a central box containing $+22$. It has three input shapes on the left: a circle with 78, a pentagon with 31, and a diamond with 57. It has three output shapes on the right: a circle, a pentagon, and a diamond.

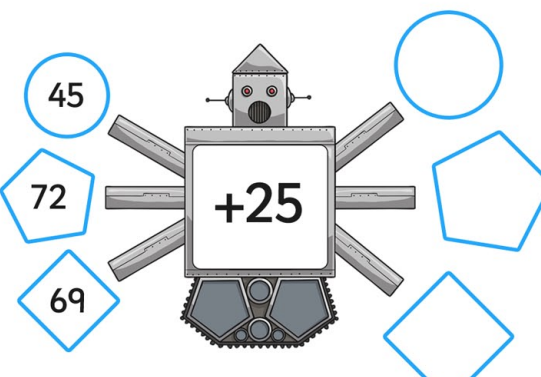

A function machine with a central box containing $+18$. It has three input shapes on the left: a circle with 42, a pentagon with 75, and a diamond with 18. It has three output shapes on the right: a circle, a pentagon, and a diamond.

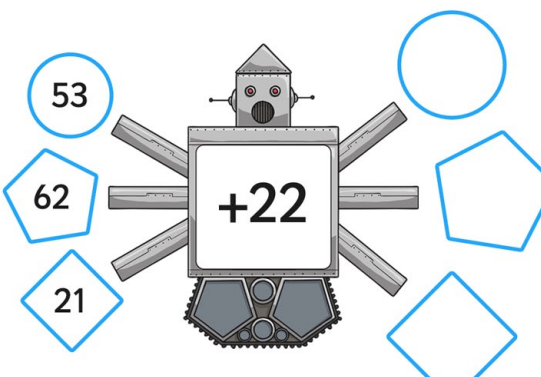

A function machine with a central box containing $+15$. It has three input shapes on the left: a circle with 37, a pentagon with 21, and a diamond with 62. It has three output shapes on the right: a circle, a pentagon, and a diamond.

A function machine with a central box containing $+35$. It has three input shapes on the left: a circle with 60, a pentagon with 39, and a diamond with 24. It has three output shapes on the right: a circle, a pentagon, and a diamond.

A function machine with a central box containing $+25$. It has three input shapes on the left: a circle with 45, a pentagon with 72, and a diamond with 69. It has three output shapes on the right: a circle, a pentagon, and a diamond.

A function machine with a central box containing $+22$. It has three input shapes on the left: a circle with 53, a pentagon with 62, and a diamond with 21. It has three output shapes on the right: a circle, a pentagon, and a diamond.
