It is time for some real action from you, not more platitudes.

- The spirit and the letter of Stipulated Order of Abatement are being ignored by State Parks. The agency has excluded and ignored required input from the Scientific Advisory Group, the experts in remediation. All approvals have been "conditional" and those conditions continue to be ignored.
- For 19 months, since the Stipulated Order of Abatement was approved, State Parks has demonstrated total disregard for the welfare of Nipomo Mesa residents and all regulatory mandates. There is therefore no reason to believe State Parks has any intention of doing anything but continue to resist, obstruct and delay.
- We therefore ask you, the Hearing Board, to exercise your authority to hold State Parks accountable by discontinuing motor vehicle activity on the La Grande Tract, the source of most of the dangerous pollution, until such time as State Parks installs sufficient mitigation in the most emissive areas identified by the California Air Resources modeling to rectify its ongoing assault on public health and safety.
