Campus Findings and Deficiencies

Historical Summary

The campus was originally developed in 1960 with the adjacent community park. Two more buildings both similar in size and style to the first, were added in 1962 and 1977. In 2001, a new office administration wing was attached to the front of the original school building, and the whole campus underwent a major modernization project overhauling restroom fixtures, HVAC systems, and roofing. Modular units have been added gradually to the western boundary of the school yard. Most recently, a new classroom building was built in 2005 to accommodate the steady growth of the Santa Maria community.

Architectural

Aside from the modular units, the main campus buildings share a similar style, wood frames supplemented by metal supports, large asphalt shingle roof overhangs and a painted stucco finish to name a few. These overhangs lack gutters and downspouts resulting in water runoff with soil erosion for each building, excluding the newest addition. Finishes have been replaced as needed and are anticipated for lifecycle replacement based on useful life and normal wear.

Mechanical, Electrical, Plumbing and Fire (MEPF)

HVAC equipment in Buildings 010, 020, 030 have no cooling and rely on gas-fed furnaces located in mechanical attics. The newer building 500 has dedicated split system condensing units with corresponding fan coil units for each classroom. Electrical service is fed from the main switchboard in Building 020 and fed to the other buildings along the connected covered walkways. Domestic hot water is limited to the office and kitchen areas supplied via small electric and large gas water heater units respectively. Fire suppression sprinklers have been added to the mechanical attics with limited sprinkler heads incorporated into utility closets.

Site

Both concrete parking lots are in fair condition and will be due for re-striping soon. All exterior lighting has been upgraded to LED fixtures on timers. Neither playground area has accessible entrances, however this issue may already be budgeted and anticipated. In addition, the play surface wood chips have compacted and will require a replenishment order within the year.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cutoff points.

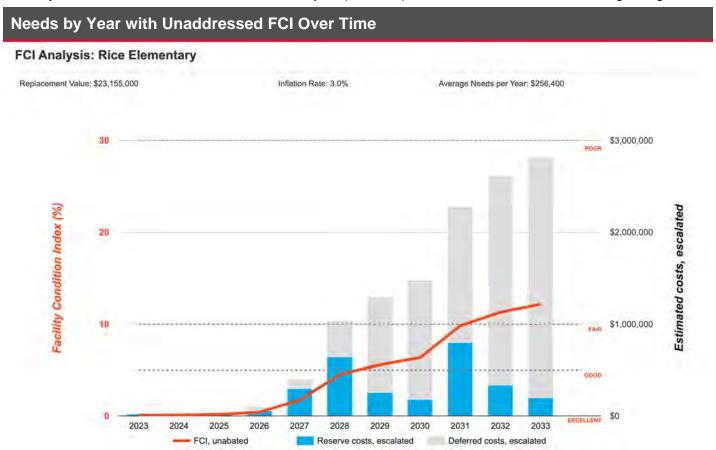

| FCI Ranges and Description | | | | | |
|---|---|--|--|--|--|
| 0 – 5% In new or well-maintained condition, with little or no visual evidence of wear or deficience | | | | | |
| 5 – 10% | Subjected to wear but is still in a serviceable and functioning condition. | | | | |
| 10 – 30% | Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life. | | | | |
| 30% and above | Has reached the end of its useful or serviceable life. Renewal is now necessary. | | | | |

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being overanalyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

| Facility (year built) | Cost/SF | Total SF | Replacement Value | Current | 3-Year | 5-Year | 10-Year |
|---------------------------------------|---------|----------|-------------------|---------|--------|--------|---------|
| Rice Elementary / Building 010 (1960) | \$550 | 12,500 | \$6,875,000 | 0.0% | 0.1% | 3.1% | 13.4% |
| Rice Elementary / Building 020 (1962) | \$550 | 10,750 | \$5,912,500 | 0.0% | 0.0% | 2.9% | 8.9% |
| Rice Elementary / Building 030 (1977) | \$550 | 10,750 | \$5,912,500 | 0.0% | 0.1% | 3.5% | 10.3% |
| Rice Elementary / Building 500 (2005) | \$550 | 8,100 | \$4,455,000 | 0.0% | 0.0% | 5.2% | 7.3% |

Campus Level FCI:

The vertical bars below represent the year-by-year needs identified for the entire campus. The orange line in the graph below forecasts what would happen to the campus FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

The table below shows the anticipated costs by trade or building system over the next 20 years.

| System | Immediate | Short Term (1-2 yr) | Near Term (3-5 yr) | Med Term (6-10 yr) | Long Term (11-20 yr) | TOTAL |
|---------------------------------|-----------|------------------------|-----------------------|-----------------------|-------------------------|--------------|
| Facade | 14. | - | \$129,596 | \$372,918 | \$1,144,592 | \$1,647,106 |
| Roofing | | | \$2,457 | \$42,484 | \$347,643 | \$392,584 |
| Interiors | - | - | \$347,864 | \$134,869 | \$771,350 | \$1,254,083 |
| Plumbing | 14 | \$3,386 | \$7,622 | \$87,369 | \$889,870 | \$988,247 |
| HVAC | | - | \$103,143 | \$498,157 | \$211,320 | \$812,620 |
| Fire Protection | | - 61 | \$5,332 | \$14,142 | \$21,126 | \$40,600 |
| Electrical | 12 | | \$6,146 | 4 | \$567,103 | \$573,249 |
| Fire Alarm & Electronic Systems | - | + | \$160,469 | \$118,728 | | \$279,197 |
| Equipment & Furnishings | ¥. | - | \$60,293 | \$263,750 | \$79,457 | \$403,500 |
| Special Construction & Demo | 12 | 2 | - | - | \$4,650,421 | \$4,650,421 |
| Site Development | \$21,810 | 7 | \$164,623 | \$213,530 | \$553,879 | \$953,842 |
| Site Pavement | Ŕ | \$13,836 | \$14,712 | \$33,095 | \$82,843 | \$144,486 |
| Site Utilities | 4.0 | 180 | * | 34-1 | \$21,105 | \$21,105 |
| TOTALS (3% inflation) | \$21,900 | \$17,300 | \$1,002,300 | \$1,779,100 | \$9,340,800 | \$12,161,400 |

Immediate Needs

| Facility/Building | | | | | Total Items | | Total Cost |
|-----------------------|------------------------|----------------------|---------|---|-------------|-----------------------|------------|
| Rice Elementary / Sit | e | | | | 1 | | \$21,800 |
| Total | | | | | 1 | | \$21,800 |
| Site | | | | | | | |
| <u>ID</u> | Location | Location Description | UF Code | Description | Condition | Plan Type | Cost |
| 5351302 | Rice Elementary / Site | Playground | G2050 | Playfield Surfaces, Chips Wood, 3" Depth, Replace | Poor | Performance/Integrity | \$21,800 |
| Total (1 items) | | | | | | | \$21,800 |

Key Findings

Drinking Fountain in Poor condition.

Exterior/Site, Metal Pedestal Building 030 Rice Elementary Building exterior

Uniformat Code: D2010

Recommendation: Replace in 2024

Priority Score: 83.8

Plan Type:

Performance/Integrity

Cost Estimate: \$3,300

\$\$\$\$

Half of the faucets are inoperable - AssetCALC ID: 5351255

Playfield Surfaces in Poor condition.

Chips Wood, 3" Depth Site Rice Elementary Playground

Uniformat Code: G2050

Recommendation: Replace in 2023

Chips need to be replenished - AssetCALC ID: 5351302

Priority Score: 82.9

Plan Type:

Performance/Integrity

Cost Estimate: \$21,800

\$\$\$\$

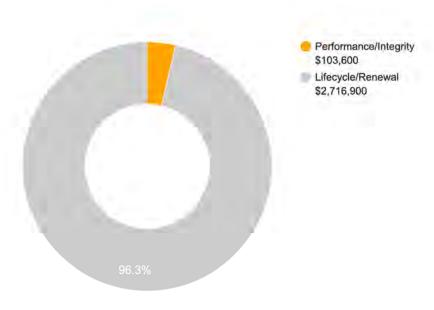

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

| Plan Type Descriptions | | | | | |
|------------------------|--|--|--|--|--|
| Safety | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. | | | | |
| Performance/Integrity | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability. | | | | |
| Accessibility | Does not meet ADA, UFAS, and/or other handicap accessibility requirements. | | | | |
| Environmental | Improvements to air or water quality, including removal of hazardous materials from the building or site. | | | | |
| Retrofit/Adaptation | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs. | | | | |
| Lifecycle/Renewal | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. | | | | |

Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$2,820,500

| Building 010: Systems Summary | | | | |
|-------------------------------|--|-----------|--|--|
| Constructed/Renovated | 1960/2001 | | | |
| Building/Group Size | 12,500 SF | | | |
| Number of Stories | 1 above grade | | | |
| System | Description | Condition | | |
| Structure | Conventional wood frame structure over concrete slab foundation | Fair | | |
| Façade | Primary Wall Finish: Brick Secondary Wall Finish: Stucco Windows: Aluminum | Fair | | |
| Roof | Primary: Gable construction with asphalt shingles Secondary: Flat construction with single-ply TPO/PVC membrane | Fair | | |
| Interiors | Walls: Painted gypsum board and ceramic tile Floors: Carpet, VCT, and ceramic tile Ceilings: Painted gypsum board and ACT | Fair | | |
| Elevators | None | | | |
| Plumbing | Distribution: Copper supply and cast iron waste and venting Hot Water: Electric water heaters with integral tanks Fixtures: Toilets, urinals, and sinks in all restrooms | Fair | | |

| Building 010: Systems Summary | | | | | |
|-------------------------------|---|-----------|--|--|--|
| HVAC | Non-Central System: Gas Furnaces Supplemental components: Split-system heat pump for server/electrical room | Fair | | | |
| Fire Suppression | Fire extinguishers only | Fair | | | |
| Electrical | Source and Distribution: Fed from 020 building with copper wiring Interior Lighting: Linear fluorescent Emergency Power: None | Fair | | | |

| Building 030: Systems Summary | | | |
|-------------------------------|---|------------------------|--|
| HVAC | Non-Central System: Gas Furnaces Supplemental components: Exhaust Fans | Fair | |
| Fire Suppression | et-pipe sprinkler system, fire extinguishers, and kitchen hood system | | |
| Electrical | Source and Distribution: Fed from 020 building with copper wiring Interior Lighting: Linear fluorescent Emergency Power: None | Fair | |
| Fire Alarm | Alarm panel with smoke detectors, heat detectors, alarms, strobes, pull stations, back-up emergency lights, and exit signs | ms, strobes, pull Fair | |
| Equipment/Special | Commercial kitchen equipment | Fair | |
| Accessibility | Presently it does not appear an accessibility study is needed for this building. See Appendix D. | | |
| Key Issues and Findings | Each exterior drinking fountain has only one working faucet out of three | | |

| Constructed/Renovated | 2005 | |
|-----------------------|--|-----------|
| Building Size | 8,100 SF | |
| Number of Stories | 1 above grade | |
| System | Description | Condition |
| Structure | Modular steel framed construction with moment frame lateral resistance systems built on a concrete slab. | Fair |
| Façade | Wall Finish: Stucco Windows: Aluminum | Fair |
| Roof | Gable construction with asphalt shingles | Fair |
| Interiors | Walls: Fabric finish and ceramic tile Floors: Carpet, VCT, and ceramic tile Ceilings: Painted gypsum board and ACT | Fair |
| Elevators | None | |
| Plumbing | Distribution: Copper supply and cast iron waste and venting Hot Water: None | Fair |

| Building 500: Systems Summary | | | |
|-------------------------------|--|------|--|
| HVAC | Non-Central System: Furnaces with split-system condensing units | | |
| Fire Suppression | Fire extinguishers only | Fair | |
| Electrical | Source and Distribution: Main panel with copper wiring Interior Lighting: Linear fluorescent Emergency Power: None | Fair | |
| Fire Alarm | Alarm panel with smoke detectors, heat detectors, alarms, strobes, pull stations, and exit signs | Fair | |
| Equipment/Special | None | | |
| Accessibility | Presently it does not appear an accessibility study is needed for this building. See Appendix D. | | |
| Key Issues and Findings | None observed at time of assessment. | | |

6. Site Summary

| Site Information | | |
|-------------------------------|--|-----------|
| System | Description | Condition |
| Pavement/Flatwork | Concrete lots with adjacent concrete sidewalks, curbs, and ramps | Fair |
| Site Development | Building-mounted signage; chain link wall fencing Playgrounds and sports fields and courts with fencing Thermoplastic park benches and picnic tables | Fair |
| Landscaping and Topography | Significant landscaping features including lawns, trees, bushes, and planters Irrigation present Flat topography throughout | Fair |
| Utilities | Municipal water and sewer Local utility-provided electric and natural gas | Fair |
| Site Lighting | Pole-mounted: LED Building-mounted: LED | |
| Ancillary Structures | Storage sheds and Prefabricated modular buildings | |
| Accessibility | Presently it does not appear an accessibility study is needed for the exterior site areas. See Appendix D. | |
| Key Issues and Findings | Playground play surfaces need to be replenished with more wood chips | |

7. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, and the exterior of the property.

Key Spaces Not Observed

Areas of note that were either inaccessible or not observed for other reasons are listed here:

Roof access Building 010; lack of ladder or other means of access

8. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

- 1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities:
- Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
- 3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance

The campus was originally constructed in 1960 and substantially renovated in 2001

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues within the campus was reported.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the campus facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

9. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings | | | |
|-------------------|---|--|--|
| Excellent | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service. | | |
| Good | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service. | | |
| Fair | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life. | | |
| Poor | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. | | |
| Failed | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required. | | |
| Not Applicable | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present. | | |

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans
 with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for
 further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding
 of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior
 common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

10. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its effective age, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

11. Certification

DLR Group (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Rice Elementary, 700 East Vickie Avenue, Santa Maria, California 93454, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Parking

OVERVIEW OF ACCESSIBLE PARKING AREA

, CLOSE-UP OF STALL

| | Question | Yes | No | NA | Comments |
|---|---|-----|----|----|----------|
| 1 | Does the required number of standard ADA designated spaces appear to be provided? | × | | | |
| 2 | Does the required number of van-accessible designated spaces appear to be provided? | × | | | |
| 3 | Are accessible spaces on the shortest accessible route to an accessible building entrance ? | × | | | |
| 4 | Does parking signage include the International Symbol of Accessibility? | × | | | |
| 5 | Does each accessible space have an adjacent access aisle ? | × | | | |
| 6 | Do parking spaces and access aisles appear to be relatively level and without obstruction? | × | | | |

Exterior Accessible Route

ACCESSIBLE PATH

2ND PATHWAY

| | Question | Yes | No | NA | Comments |
|---|---|-----|----|----|----------|
| 1 | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property? | × | | | |
| 2 | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances? | × | | | |
| 3 | Are curb ramps present at transitions through raised curbs on all accessible routes? | × | | | |
| 4 | Do curb ramps appear to have compliant slopes for all components ? | × | | | |
| 5 | Do ramp runs on an accessible route appear to have compliant slopes ? | × | | | |
| 6 | Do ramp runs on an accessible route appear to have a compliant rise and width ? | × | | | |

| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? | × | | |
|---|---|---|--|--|
| 8 | Do ramps and stairs on an accessible route appear to have compliant handrails? | × | | |
| 9 | For stairways that are open underneath, are permanent barriers present that prevent or discourage access? | × | | |

Building Entrances

MAIN ACCESSIBLE ENTRANCE

ADDITIONAL ENTRANCE

| | Question | Yes | No | NA | Comments |
|---|---|-----|----|----|----------|
| 1 | Do a sufficient number of accessible entrances appear to be provided? | × | | | |
| 2 | If the main entrance is not accessible, is an alternate accessible entrance provided? | | | × | |
| 3 | Is signage provided indicating the location of alternate accessible entrances? | | | × | |
| 4 | Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ? | × | | | |
| 5 | Do doors at accessible entrances appear to have compliant hardware ? | × | | | |
| 6 | Do doors at accessible entrances appear to have a compliant clear opening width? | × | | | |

| 7 | Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ? | | × | |
|---|---|---|---|--|
| 8 | Do thresholds at accessible entrances appear to have a compliant height? | × | | |

Interior Accessible Route

ACCESSIBLE INTERIOR PATH

DOOR HARDWARE

| | Question | Yes | No | NA | Comments |
|---|---|-----|----|----|----------|
| 1 | Does an accessible route appear to connect all public areas inside the building ? | × | | | |
| 2 | Do accessible routes appear free of obstructions and/or protruding objects? | × | | | |
| 3 | Do ramps on accessible routes appear to have compliant slopes ? | | | × | |
| 4 | Do ramp runs on an accessible route appear to have a compliant rise and width ? | | | × | |
| 5 | Do ramps on accessible routes appear to have compliant end and intermediate landings? | | | × | |
| 6 | Do ramps on accessible routes appear to have compliant handrails ? | | | × | |

| 7 | Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage? | | × | |
|----|--|---|---|--|
| 8 | Do public transaction areas have an accessible, lowered service counter section ? | × | | |
| 9 | Do public telephones appear mounted with an accessible height and location ? | | × | |
| 10 | Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ? | × | | |
| 11 | Do doors at interior accessible routes appear to have compliant hardware ? | × | | |
| 12 | Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ? | × | | |
| 13 | Do doors on interior accessible routes appear to have a compliant clear opening width? | × | | |
