

Guidelines for Cellulite Treatment (Adipositas oedematosa)

The combination micro needling, caffeine, maltodextrin and natural extracts has been proven to treat cellulite, water retention and constitutional changes in the subcutaneous fat tissue in the thigh and buttock area. Using Matrixneedling™ and its following eight simple steps improves the microcirculation and stimulate metabolism for firmer skin.

Indication	changes in the subcutaneous fat tissue in the thigh and buttock area
Observation	cellulite (dermopanniculosis deformans, obesity oedematosa) "orange peel" skin dimpled skin surface weak connective tissue
Perforation	1,5 mm
Interval	monthly
Sessions	8
Duration	45-60 minutes

Suggested Products

Matrixneedling™

- Cleanser
- Enzymatic Peeling
- Cellulite Reversal
- Dermaroller 1,5 mm
- Hydration Body Mask
- Repair Balm
- UV Protect SPF50+
- Enhancing Cream Cellulite Solution

TX Add-Ons™

- Disinfectant Spray
- Skin Sanitizer
- Protective Sleeves/Gloves
- Facial Headband
- Facial Cleansing Sponges
- Peel Bowl
- Chemical Peel Brush
- Syringe

Matrixneedling™ treatment must be performed in a dry, clean, smoke-free, and hygienic area. Ensure there is adequate lighting in the room where the treatment will be performed. Before the treatment begins, ensure that all products and equipment are available and that all safety measures and procedures are met.

Gently and thoroughly cleanse the skin. The Cleanser is gentle and effective in cleansing the skin from dirt, sebum oil, make-up and debris, and does not contain harsh chemicals that dry out or irritate the skin. Select a cleanser best suited for the skin type: sensitive, normal, oily skin, or acne-prone skin. Place a small amount of it on fingertips and combine with lukewarm water until there is a foam. Gently massage the cleansing foam on the body treatment area and remove the excess foam with damp, facial cleansing sponges.

Active ingredients: Ceramide, Bamboo Extract, Allantoin, Witch Hazel, Vitamin E

Removing dead skin cells creates a foundation for rapid skin renewal after the treatment. The Enzymatic Peeling contains an effective combination of encapsulated papaya enzymes and bromelain. Depending on the size of the treatment area, pour the suggested amount into the peel bowl and evenly spread over the skin area with the chemical peel brush. Leave on for at least 5 minutes, but no longer than 10 minutes. Afterwards, remove the peel mask with the facial cleansing sponge and rinse thoroughly. Gently pat the skin dry with a clean towel if needed.

Active ingredients: Papaya Enzyme, Bromelain, Mannitol, Vitamin E

Topical anesthetic: A topical anesthetic (EMLA) can be helpful depending on the patient's level of discomfort towards a needle length of 0,75mm. For the local anesthetic, apply the cream to the face after the Enzymatic Peeling and leave on for about 30 minutes. The portion of the skin that has the local anesthetic should be completely covered with an airtight and watertight cover e.g., an occlusive bandage or simple cling film. Read the package guidelines.

Disinfection: Apply an undiluted, colorless skin antiseptic to the skin. Read the manufacturer's information on exposure time, usually 30 seconds at the most.

The Cellulite Reversal Serum with 5% caffeine and maltodextrin improves microcirculation, stimulates fat burning, metabolism and lipolysis. It reduces swelling and water retention and dissolves and breaks down accumulated fat in the body. Remove the ampoule cap, attach the cannula to the syringe. Pierce plastic septum and withdraw the suggested amount as noted above with the syringe. When complete, remove the cannula and safely dispose of all items. Evenly distribute the serum on the desired area. The serum now serves as a lubrication barrier between the skin and the needling device in the following step.

Active ingredients: Caffeine, Maltodextrin, English Ivy Extract, Gotu Kola

4

NEEDLING

Large areas of skin can be treated efficiently with the dermaroller. The dermaroller restores elasticity and collagen production quickly and allows the active ingredients to penetrate further into the skin. Roll the dermaroller 4-8 times over the treatment area of the skin.

» Dermaroller - set to 1.5 mm, vertical, horizontal and diagonal. Please follow the instructions.

5

HYDRATION

The Hydration Body Mask provides intense hydration, supports the skin's regenerative process, and restores the body's elasticity and collagen production. Redness, irritation, microtears and dryness are immediately reduced. Remove the mask from the packaging and remove both protective coverings. Apply the mask to the body and distribute the serum onto the mask evenly. Leave on for 10-15 minutes. Remove the mask and massage the remaining serum into the skin.

Active ingredients: Matrixyl®, Niacinamide, Hyaluronic Acid, Gatuline® Expression AF, iActive-Complex, PRODEW® 500, Prickly Pear

6

REPAIR

The Repair Balm strengthens the skin barrier and restores the skin's pH balance. Open the individual repair balm package and massage into the skin in circular motions. Allow the cream to absorb into the skin. Do not rinse off.

Active ingredients: Bifida Ferment Lysate, Allantoin, Urea, Hyaluronic Acid

7

PROTECT

Protect the skin from UV radiation at the end of the treatment. UV Protect Cream SPF50+ is a high protective and repairing fluid that quickly absorbs into the skin and provides a sun protection factor of 80. It is based on proven UVB and UVA filters, as well as nourishing ingredients for skin stabilization. Spray the cream to the desired skin area and massage into the skin in circular motions. Allow the cream to absorb into the skin.

Active ingredients: DNA Repair Enzymes, Proteins, Plankton Extract

8

DAILY CARE

Patient guidelines to do at home. The Enhancing Cream Cellulite Solution is a supportive daily cream that improves the results of your micro needling treatment in-between appointments. Use daily in the morning and evening for two weeks. Distribute a small amount onto the skin that received the micro needling treatment.

Active ingredients: Caffeine, Horsetail Extract

Avoid after treatment: direct sunlight, sauna, steam bath, and heavy sweating

Health warnings, precautions and contraindications

It is highly suggested to not undergo the treatment if you suffer from or have the following:

- » Allergies, epilepsy, infections or any autoimmune diseases, respiratory infections, any other heart-related illnesses, or skin infections of the treated area.
